The Information You Want When You Want It

We have planned a filing system that enables you to keep the live, reliable information contained in MacLean Building Reports in one convenient file. 4" x 6" manilla folders hold each report, together with any follow-up or other matter required. Colored signals are used for indicating the dates on which each project should be followed. In this way the clean-cut definite data on

Building and Engineering

contracts contained in every MacLean Report can be located at once, or brought to your notice at the time when you can make the best use of it. Many progressive firms are getting worth-while results from our service. May we not serve you?

TRANSCONTINENTAL LUMBER COMPANY

103 St. Francis Xavier Street Telephone No. Main 7121 **MONTREAL**

WE SELL

"Build a Home!— Consult Your Lumber Dealer"

To Dealers in Long Bell Products:

This is the message The Long-Bell Lumber Company is putting into the hands of **your prospective customers** month after month, urging them to action in building a home, and directing them to your yard.

In your town and on the farms in your community Long-Bell advertisements in national publications are reaching your trade time and again with this insistent message—"Build a Home."

And it is working! A letter came the other day (it was an average one of a large number of similar letters we have had this year) saying: "We are getting ready to build this spring. Seeing your advertisement in The Saturday Evening Post, we were attracted by the delightful home shown, of just the small size we are planning. Can you tell us where we may buy the blue prints of a home like this?

A buyer in that frame of mind means business; and that means business for some retail lumber dealer which is the aim of our campaign.

If you do not know just how our national advertising and dealer service can benefit you, ask our salesman—or write direct to the Advertising Department.

But we do not furnish our plans to consumers. To those consumers who inquired was sent a letter somewhat as follows: "The Long-Bell Plan Service, containing many attractive homes, is distributed only through retail dealers. Your retail dealer, if he does not have this service on hand, may obtain it. Undoubtedly he has many plans of homes for your inspection, and we refer to your local lumber dealer with the thought that you should make no selection of a home until you have seen his service and had his advice in the matter."

Wherever possible we send copies of such letters to local dealers so that they may know the names and addresses of these persons who are beginning to plan to build.

A Pennsylvania lumber dealer, noting our announcement that Home No. 1073 from the Long-Bell Plan Service would be featured in our advertisement of May 14 in The Saturday Evening Post, wrote in immediately ordering a 2-column cut of this house. He is going to advertise this house in his newspapers on May 14, calling attention to its appearance in The Saturday Evening Post of that week.

The free advertising cuts, pictures, slides and other material in our dealer service (which are yours for the asking) are the methods we provide to enable the dealer in Long-Bell products to tie up with our national advertising. These are times when it is necessary to use every sales force available to bring the business into your yard. Our national advertising and our dealer service (one of the real extra values back of every foot of lumber we sell) are some of the means by which the dealer can cash in on prospective business. The time is ripe now for making it work relentlessly for you; we will be glad to tell you how to use it to best advantage.

The Best the Market Affords

That's what you get when your order is placed with us. And at prices that are always within reason, too. Our connections with some of the finest timber limits in the country and splendid facilities for manufacturing enable us to do it. Just get in touch with us for anything you may require—it doesn't matter whether your order is large or small we guarantee you every satisfaction.

THE MOST VITAL POINT
For Consideration

To a LUMBERMAN in Placing his INSURANCE is the Certainty of Prompt LOSS SETTLEMENT

In the event of a FIRE. The ALLIANCE has Paid the LUMBERMEN In the PAST
$5,470,626.97

It has, Ready to Take Care of Future Losses, a Net Surplus of
$1,681,103.41

Its Combined Surplus and Re-Insurance Reserve Amounts to the Substantial Sum of
$2,508,724.62

U. S. Epperson Underwriting Co.,
Kansas City, Mo.

Quebec, Canada, January 3, 1921.

Gentlemen:

We beg to acknowledge receipt of your cheque covering your share of the loss on our plant destroyed by fire on the 5th of December last.

We wish to express our sincere thanks and deep appreciation for the prompt and satisfactory way in which you have settled our loss. The fact that you had sixty days to settle the matter, and that your cheque was sent barely three weeks after our loss, has been noted and very much appreciated by the Bank of Montreal and ourselves.

Hoping for better luck for both of us in the future and the continuation of very agreeable business relations, as in the past, we remain,

Yours very truly,
CANADA LUMBER & BOX CO., LTD.
G. Garneau, Secy.-treas.

ANY Company suffering loss under policies of the LUMBERMEN'S UNDERWRITING ALLIANCE may expect the same kind of settlement as outlined in this letter. Particulars regarding our service may be obtained by addressing the

WE INVITE YOUR ENQUIRIES

Mills at Midland, Ont., Thunder Bay, Ont. Head Office :—Midland, Ont.

Performing An Imperative Service

In no phase of our business is care more thoughtfully exercised than in the selection and training of men for their places in this organization.

The importance of this will be recognized by those who realize the value of fire prevention work.

Our insurance policy is not only a guarantee of prompt payment of fire loss, but it also carries with it a service that includes a regular fire prevention inspection on your property.

A thorough fire prevention inspection may save your property from destruction, and it will also assist a great deal in accumulating larger savings which will result in better insurance for less money.

PACKARD

Operating Thirty-four Packards They Bought Twenty-five More

There is splendid tribute to Packard Trucks, to their economy and their sureness, in the building up of the truck fleet of the United Fuel and Supply Company, of Detroit, Michigan.

This firm ordered twenty-five new Packards. Already they were using thirty-four. Their fleet in action today totals fifty-nine—an investment of nearly $300,000 in Packard Trucks.

The Packard Truck wins such recognition as this by its superior earning power—the product of correct design, selected materials, good workmanship and precise manufacturing methods.

In addition, every Packard Truck has the advantage of being rated accurately to the actual work that it must do, by Packard transportation engineers.

Then to complete the Packard plan of better hauling at lower cost, local service facilities are established nation-wide to keep Packard Trucks at the highest possible level of efficiency.

CROSS-CUT SAWS

Fast and easy running saws are a big help in the timber operation where production counts for everything. If the saws used are the best, it stands to reason that both the sawyer and boss are to reap the benefits. It has been proven that for falling or bucking the Simonds Crescent—Ground Cross—Cut Saw leads all others. It is made of the finest saw steel obtainable and holds its keen cutting edge on the hardest kind of work. Then, too, it is an easy running saw that does not bind in the kerf.

Write us about your saw requirements.

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, $3.00 per year, in advance; other foreign countries embraced in the General Postal Union, $4.00.

Single copies, 20 cents.

"The Canada Lumberman" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

What the Association Spirit Does

The benefits of association, of mingling with one's fellows and rubbing shoulders with one's competitors have frequently been extolled in print and speech.

There is no doubt that the association spirit is growing rapidly. It has manifested itself in every trade, calling and industry, and there is scarcely any business now which is not organized in a local, provincial or national way, with a permanent secretary, constitution and by-laws and a splendid record of progress, unity and co-operation.

Aside altogether from the social and neighborly satisfaction of meeting with those in the same line of endeavor, there is the practical and economic value of attending such gatherings. From them much is learned, bright ideas are put forward, practical plans are suggested, timely information disseminated and the solution of perplexing problems presented.

The members are subjected to broadening and enlightening influence. If they are engaged in the retail lumber business, they learn that the wholesaler and the manufacturer have their trials and tribulations and that, in many instances, they are up against the same difficulties and dangers as those in the retail line. Most men are too prone to think that all the ills and distresses, so characteristic in a time of depression or stagnation, peculiarly affect their own operations and that the other fellow is not subject to similar set-backs.

The association spirit enables a man to look at the situation from many angles; to view a problem from new and different standpoints and to arrive at a sane and safe decision after giving everything pertaining to an issue careful thought and earnest study. Probably no better example of what an association can do for retailers has been afforded than at the recent annual meeting of the South-western Ontario Retail Lumber Dealers' Association. This is the pioneer body of its kind in the province, and has made wonderful strides. So well pleased was everyone identified with the organization that they unanimously decided to double the membership fee. Meetings are held practically every two months at which local and district questions of vital importance are taken up.

At the annual meeting such problems as millwork cost, railway rates, shipments, advertising, book of plans, mutual insurance, Mechanics' Lien Act, market conditions, etc., were given consideration and discussion, while the representatives had the pleasure of listening to a progressive lumber manufacturer on the difficulties that the producing end had to encounter. By showing what the manufacturer is up against; how he has to take heavy losses at the present cost of getting out logs and turning them into the finished product, etc., he made the retailers appreciate the fact that, in this workaday world, each unit has its own peculiar problems to meet. It is only by the various factors in each national calling extending a spirit of tolerance and good-will that the greatest good will result.

In the Days of Wild Rumor

In days of great national excitement or industrial depression it would appear as if any kind of rumor could be set afloat and gain a great measure of credence. Stories that, in normal times would be scouted as false, ridiculous or unjust, are in abnormal periods eagerly seized upon, and with repetition comes exaggeration. It would be well to give some of these "yarns" or, one might say "malicious statements," a cold shoulder or, at least, investigate the authenticity of them before swallowing everything holus bolus.

During the war there were all kinds of fool reports circulated regarding victories and defeats, starvation and alienation, losses and costs, and millions and billions rolled off the tongue as fluently as dollars and cents in an era of peace. Now that the strain and stress of European hostilities are over and industrial depression and deflation have set in to a certain extent, all kinds of ill-advised and ill-considered assertions or hazards are being handed about. This is true in every trade, and particularly in the lumber business, where every sort of story and unreliable news is spread. This not only prevails in reference to cut prices on lumber but also violations of trade ethics or practices.

It is not well to believe all that one hears even in days like these, and especially now when matters are greatly upset. Talk has been going around about how certain firms, in order to unload stock, have accepted an unheard of low figure, and there are still more malicious tidings hurled against firms of recognized reputation and known integrity, of selling to contractors and others or disposing of their product in a way that is not orthodox or ethical, according to the established standards. Recently a well-known lumber company was reported to have sold to a certain contractor in a western city and the rumor gained wide ground before it reached the ears of the manager. He then took up the question and wrote direct to the dealer, who started the allegation, asking him to have the contractor to whom the firm was reputed to have sold some stuff, produce any evidence whatever in support of the canard, such as copies of invoices, expense bills showing the name of the firm as shippers or cancelled vouchers issued in favor of the firm. Of course, it was not possible for this to be done, showing conclusively that the firm had been the victim of a harmful report.

It is well to remember that many malicious reports are circulated out of envy, disappointment, jealousy or misrepresentation, but it is safe to say that 95% of all the wholesale and manufacturing firms in eastern Canada are upright, reliable and trustworthy. They maintain a strict policy of selling only to legitimate dealers operating regularly established yards or to large industries in the woodworking line.

All of this drives home the fact that before any rumors are circulated, they should be, at least, enquired into, as the effect of false information may prejudice the name of an honest firm and create dissension and discontent. One cannot be too careful regarding his own tongue and reputation as well as those of his associates in the business world, all of which reminds one of the old aphorism that "a lie will travel miles while truth is getting its boots on."

The Problem of Work and Wages

Chas. M. Schwab recently delivered an address before the Chamber of Commerce in New York in which he stated that Germany through the economy and sacrifice of her working people had settled down to reproduction and was outstripping the United States and

allied nations in the fight toward normality. He pointed out how Germany was producing steel much cheaper than England, and selling pneumatic tools in Detroit, where formerly that city shipped such equipment to Germany and sold it cheaper than she could make it. Mr. Schwab said the difference is solely a matter of labor costs.

Then he went on to state that it is estimated 5,000,000 men were out of work in the United States and it was of supreme importance to the working man as well as the capitalists to restore prosperity. Never before had the need for products been so great, never before was such value producing machinery and facility available, and never before was there so much required to be done.

Continuing, the American steel magnate and capitalist declared: "Is it possible that, after having won the war, we of the allied nations, with everything in our hands, will allow Germany to win the peace through the efforts of her labor?

"Labor, on the whole, can be paid only what labor as a whole earns, and if some sections of labor exact more than their share of the current product of the world, other sections are going to suffer. I understand that our railroads to-day pay to labor over 60 cents out of every dollar received. The labor cost of making a ton of steel to-day is 85 cents out of each dollar of total cost.

"In so far as our people in America are prepared to go to work at reasonable wages, in so far as we are prepared quickly to abandon the artificial extravagances of the war, will we lay the foundations for a new prosperity such as we have never enjoyed before.

"This is the route through which not merely America but the peoples of our allies can find their way out, and triumph in peace as they did in war."

All of the foregoing is terse, timely and true, but virtually the same sentiments and ideas were given expression to in the columns of the "Canada Lumberman" eight or nine months ago by W. J. Smith, of John B. Smith & Sons, Toronto, when he delivered a frank and stirring address at North Bay at a reception tendered the visiting lumber retailers of Ontario on the occasion of their midsummer educational trip.

According to the report, which appeared in the "Canada Lumberman," Mr. Smith spoke of the labor aspect and the need of greater production on the part of certain trades. He declared the reason that many industries were slowing down was owing to the attitude of labor. Mr. Smith stressed that thrift be practiced to meet the necessity of the days to come. Owing to the terrific costs, many persons with money who contemplated building, were holding off by reason of the inefficiency of bricklayers, plumbers and other trades. Mr. Smith furnished a number of examples of the inefficiency of labor, and asserted that there were men in every city and town possessed of an ample amount of money and ready to erect homes for themselves. Rather than undertake the task at the present time in the midst of such unrest, demands and indifference on the part of labor, they would remain tenants or live in apartments and boarding houses. If rents were further increased, many, under the present circumstances, would prefer paying an advance sooner than build under the conditions existing to-day, particularly so far as labor is concerned.

It will be observed that Mr. Smith pointed all this out as far back as August last and gave expression to the same thoughts at North Bay as Mr. Chas. M. Schwab did lately in New York. The strength of the position taken, the candour of the statements, the saneness of the view, and the subsequent depression in industrial, commercial and economic circles, have demonstrated that what was said at North Bay many months ago, is turning out to be exactly as predicted. As one authority recently said, "unemployment is a serious problem these days. Labor in demanding wages even higher than those current in the past year or so, is merely making a bad situation worse and more difficult to solve."

Who Plants a Tree Plants a Hope

Many towns and cities in Ontario are conducting a vigorous tree-planting campaign with the object of beautifying streets, avenues and boulevards, and converting cheerless open spaces and unsightly squares into shady and artistic retreats. The work is one which is being encouraged by parks boards, horticultural societies and other civic bodies. In some schools the children are being given practical demonstrations in reforestation, and saplings are being secured which will be planted in city parks. The pupil who plants the tree has the privilege of naming it, and thus a spirit of pride and possession is engendered.

It is announced that one city recently received 1,200 trees from the Provincial Forestry Department, which will be set out in the different parks. In the lot were butternut, elm, sugar maple, walnut, pine and red oak. It is understood that the Department of Public Highways is prepared to help in the beautification of the provincial thoroughfares with landscape and ornamental effects if given a little encouragement and co-operation.

In a recent address delivered in one western town, the former head gardener of Queen Victoria Park, Niagara Falls, who is now provincial forester for the Department of Highways, spoke of the importance of the beautification of the approaches to cities, which he said meant the development of them industrially, artistically and in every other way. Such a centre attracts tourists and also people who are looking for pleasant places in which to build homes.

A spirit of tree-planting develops community pride and causes people to vie with one another to improve their property in keeping with the environments. Children are inspired by the inviting and the ornate, and delight in a home that is surrounded by everything lovely and pleasing.

It has been declared that there is no more sacred or ennobling a place than home. Everybody should try to understand the yearning and longings of the average family. Children should be encouraged to plant trees so that they may love them and each municipality should have tree plots and let the younger generation take part in the annual tree-planting fete. Arbor Day will be celebrated this year as usual on May 20th, and each school will, no doubt, do its part in making bright its environs by planting and otherwise catering to aesthetic tastes and instinct.

Tree-planting is a great and inspiring work. It should receive support in every community and from every society or public body, which has as its aim the making of this old globe a more fit and lovely place in which to dwell. Thus is practical expression given to the oft-repeated truism that "a thing of beauty is a joy forever," and has not Joyce Kilmer sweetly said:—

I think that I shall never see
A poem lovely as a tree—

A tree whose hungry mouth is prest
Against the earth's sweet flowing breast;

A tree that looks at God all day
And lifts her leafy arms to pray;

A tree that may in summer wear
A nest of robins in her hair;

Upon whose bosom snow has lain;
Who intimately lives with rain.

Poems are made by fools like me,
But only God can make a tree.

There were fifty-four students in attendance in the Faculty of Forestry, University of Toronto, during the past year, which constitutes the greatest number since forestry was placed on the curriculum. The course is a four-year one and there were six graduates this month who will receive the degree of B.ScF. The school under Dr. C. D. Howe, is doing a splendid work and one that is worthy of every encouragement, support and sympathy.

Solid Mahogany

The first time I cedar I made a quick mash,
A lumberman's daughter is sweet Maple Ash;
I'll spruce up and ask her if she won't be mine,
And, if she won't have me, I know I will pine.

"Lumber, World's Cheapest Building Material"

Slogan Sounded by the Southwestern Ontario Retail Lumber Dealers' Association at Annual Gathering—New Officers Elected—Vital Topics Considered

John T. Wallace, London, Ont.
Newly-elected president.

Enthusiastic, well-attended and harmonious was the seventh annual meeting of the South-Western Ontario Retail Lumber Dealers' Association, held at the Chamber of Commerce Rooms, Sarnia, on April 27th. The gathering will live long in the minds of those who had the pleasure of being present, for the hospitality of the local dealers was unbounded and there was not an uninteresting moment during their stay in the progressive Frontier City.

Another feature of the assembly this year was that several of the members were accompanied by their wives, who were well looked after during the afternoon and evening. The ladies were given automobile rides around Sarnia and were entertained at the home of Mrs. C. H. Belton, and in the evening attended a local musical production at the Imperial Theatre.

The delegates, many of whom arrived early in the day, spent a profitable forenoon visiting the extensive and well-equipped yard and factory of the R. Laidlaw Lumber Co. on Devine St. The handsome and inviting new office of the company was much admired. The structure is covered with asphalt shingles and the interior is splendidly laid out and finished in birch mahogany.

Later the delegates made a tour of the busy sawmill of the Cleveland-Sarnia Sawmills Co., where they were warmly welcomed by E. C. Barre, general manager; W. A. Saurwein, assistant manager, and others. The mill started operating on April 18th and is cutting between 70,000 to 80,000 feet a day of white pine.

The Sarnia entertainment committee was composed of E. C. Barre, chairman; John McGibbon, C. H. Belton, W. A. Saurwein and L. H. Richards, and too much praise cannot be bestowed upon them for their kindness and attention; in fact nothing was left undone to make the seventh annual meeting of the South-Western Ontario Retail Lumber Dealers' Association an outstanding one.

After the business proceedings were over the delegates enjoyed a splendid dinner in the Chamber of Commerce dining room, provided by the Sarnia dealers. This was followed by a theatre party at the Griffin Theatre, when a special film of interest to lumbermen was shown depicting the cheap and flimsy character of a portable house. Later the visitors were taken for an automobile ride around Sarnia and paid a visit to the cosy summer home of W. A. Saurwein, located on the shores of Lake Huron about three or four miles out of the city. He certainly proved an idea host and a most delightful time was spent.

Business Proceedings Opened

One feature of the gathering that was unique was the civic welcome extended by George Crawford, mayor of Sarnia, who cordially welcomed the lumbermen and presented President John T. Wallace with the civic key. This huge, wooden device was borne in triumphantly and laid upon the desk of the new presiding officer, who accepted the gift in the same genial way in which it was tendered. The incident aroused much merriment.

The annual session opened at 2 o'clock with A. R. Sanders of St. Thomas, president of the association, in the chair. He was gratified to see such a large attendance and expressed his thanks and appreciation for the honor conferred upon him last year. Having the privilege of presiding over the deliberations of such a body was one of the proudest events in his business career. Mr. Sanders said he was much gratified at meeting so many dealers at the various meetings which had been held during the past twelve months, there being no less than eight special sessions, all of which were well attended. Several important matters had been taken up, such as cost accounting, mill work construction, how to meet mail order competition, etc., and a great deal of good had resulted from the conferences and discussions. He then called upon B. F. Clarke, secretary-treasurer of the association, to read the annual statement. This showed that the membership of the association was forty and that there was a balance on the right side of the ledger.

The next business proceeded with was the election of officers, which resulted as follows:—

The New Officers for 1921

President—John T. Wallace (Dyment, Baker Lumber Co., London).

Vice-president—E. C. Russell (Walker & Sons, Walkerville).

Secretary-treasurer—B. F. Clarke, Glencoe.

Executive Committee—S. Herath, Ojibway; M. R. Bogart (S. Hadley Lumber Co.,) Chatham; John McGibbon, Sarnia; Chas. Hubbell, Thamesville; W. J. Green, St. Thomas; J. A. McPherson, Merlin; T. C. Warwick, Blenheim; George H. Belton, London.

Discussion took place in regard to what the fee should be and it was finally decided to make it $10.00 a year. The previous fee was $5.00. All the members present expressed the conviction that the work and worth of the association was of such a valuable character that the membership should be increased. The nominating committee for the association was composed of George N. Kernohan, J. C. Scofield and A. R. Sanders.

President Sanders then vacated the chair and the newly-elected presiding officer, John T. Wallace, of London, assumed the gavel. He warmly thanked the members for the kindness they had bestowed upon him and hoped the association would have a very successful year. At this point Mayor George Crawford presented an appearance and extended a hearty welcome to the lumber dealers on the occasion of their visit to Sarnia which was a distributing point, not only for lumber but many other products. He spoke of the importance of the Chamber of Commerce to Sarnia, and said the citizens were building more homes for themselves than in any Canadian city of similar size at the present time. Last year thirty-nine houses were erected under the Housing Commission, and this year the Commission, of which he was chairman, had $100,000 at its disposal for the construction of dwellings. He believed that Sarnia was putting up more homes to-day than any other place of 18,000 population in the Dominion and among the larger structures in contemplation was a new collegiate institute and technical school to cost $700,000.

At this point his Worship extended the freedom of the city to the lumber dealers, and presented President Wallace with the civic key—a huge, wooden device. The recipient smilingly acknowledged the heartiness of the municipal greeting and assured the Sarnia authorities they were very glad to be present.

No Mutual Group Insurance

The report of the committee on Mutual Life Insurance was presented by A. R. Sanders, St. Thomas, chairman of the committee. Mr. Sanders read a letter which he had received from V. E. Gray, Superintendent of Insurance, Ottawa, and was as follows: "Answering your letter of the 7th inst., I have to advise you that there is no provision in the Ontario Insurance Act which applies to group insurance. It would not be possible under the Ontario law for the Ontario Retail Lumber Dealers' Association to organize a mutual scheme of group insurance for their employees except by special legislation."

E. D. Hardy & Co., of Ottawa, also wrote in regard to the matter, explaining that as far as they could learn, special group insurance could not be undertaken without a special enactment. Mr. Hardy said that, while the original scheme might not be taken up, there was on the other hand nothing to prevent an insurance company from writing a group of lumbermen providing some individual is responsible for the collection of the premiums. Mr. Hardy then explained further details of the plan. The meeting decided to do nothing at the present time beyond adopting the report presented by Mr. Sanders, and a hearty vote of thanks was tendered the committee for its work.

Mill Work Costs Creates Ideas

The committee on Millwork Costs then presented its report, which will be found in another column in this issue. During the discussion on this report, it was said that certain firms were supplying garage doors for $15.00 a pair which would cost the average lumber dealer $25.00 to make in his own mill. This caused Mr.

E. C. Russell, Walkerville, Ont.
Newly-elected vice-president.

B. F. Clarke, Glencoe, Ont.
Re-elected secretary-treasurer.

M. R. Bogart, Chatham, Ont.
New director of Association.

J. A. McPherson, Merlin, Ont.
New director of Association.

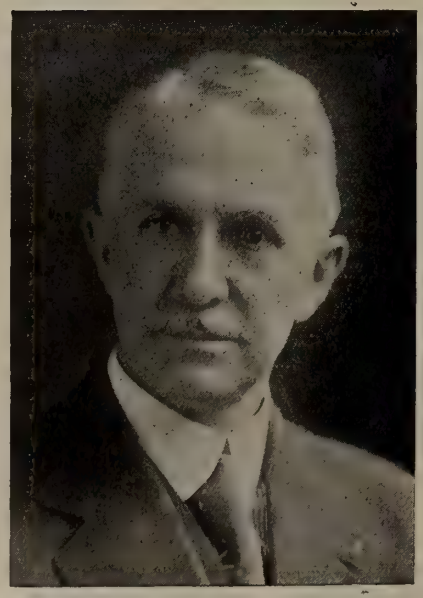
S. Herath, Ojibway, Ont.
New director of Association.

John McGibbon, Sarnia, Ont.
Re-elected director of Association.

Chas. Hubbell, Thamesville, Ont.
Re-elected director of Association.

W. J. Green, St. Thomas, Ont.
Re-elected director of Association.

George H. Belton, London, Ont.
New director of Association.



J. C. Scofield, Windsor, Ont.
Vice-president of Ontario Association.

A. R. Sanders, St. Thomas, Ont.
Retiring president of Association.

W. A. Hadley, Chatham, Ont
Former president of Association.

Officers Elected at Annual Meeting of South-Western Ontario Retail Lumber Dealers' Association, Held at Sarnia, Ont.

Scofield of Windsor to point out how certain firms were turning out ready-made material which it would not pay the average planing mill owner to have anything to do with so far as manufacturing the product is concerned. Mr. Scofield added: "If you can buy anything in the line of window frames, outside door frames, etc., do so, as it does not pay you to make them under present conditions."

Mr. Bogart argued in favor of an effort being made to standardize frames and door jambs. Other members thought that, under present conditions, and the strenuous outside competition, it would be well to furnish millwork at as low a cost as possible in order to get the business, and that the profits should be made on lumber and other supplies for the job. It was declared by some speakers that the manufacturing end of their plant should earn a reasonable profit, and that this branch should stand upon its own bottom. Other members said that this was alright in certain towns and sections, but in other places, where there were two or three dealers outside the association making special bids for this class of work, they (the members) intended to meet such competition and not let the other fellow walk off with the business.

Lumber is Cheapest Building Material

The next matter taken up was a discussion on "Would a Big Drop in the Price of Lumber Stimulate Building?" Chester H. Belton, of Sarnia, stated that he believed the drop in the price of lumber had already stimulated building to a large extent. Chicago dealers had met and adopted the slogan, "Lumber is the Cheapest Building Material in the World To-day! Buy It." He thought the retailers could make use of publicity along this line with splendid effect. He himself was doing so. Well-directed advertising should assist the public in coming to a decision to employ lumber for construction instead of other commodities which had not come down. For instance, cement had not been reduced in price to any appreciable extent in Canada, whereas in the United States it had gone down 50 per cent. Mr. Belton pointed out that all branches of the lumber industry would have to take some loss. His firm were sacrificing their stock and replacing it with lumber which they could buy much cheaper to-day than they could a few months ago. Mr. Belton contended that lumber is doing its portion in decreasing the price of building, and if attractive and effective advertising were done, he had not the slightest hesitation in saying that structural activity would be stimulated, the same as bargain sales increased buying in the ordinary stores. He advised all to make known the fact that lumber had decreased in price and now was the time to build as he did not think that values could, under present circumstances, go any lower.

G. B. Van Blaricom, editor of the "Canada Lumberman," Toronto, was asked to address the gathering, and spoke along the lines of publicity for the lumberman, the reduction in the prices on the finished product that had taken place, and added that lumber was too often made "the goat" by contractors, builders, real estate men and others for construction work not being proceeded with. Charging lumber with being too high in price and forgetting what other materials cost in comparison with it, was most unfair. Lumber had already dropped very considerably in value, and other commodities would have to come down in proportion. The various district associations were taking up the matter of showing that lumber was to-day the cheapest big article in the building world, and were going to drive home this fact with force and frequency. Mr. Van Blaricom pointed out that the retail dealers in Toronto were uniting to do some cumulative advertising in the way of showing what recessions had taken place in lath, shingles, interior trim and other lines in which they dealt. A series of advertisements would be presented, showing the public just where the retail lumber dealer was to-day and how he was taking a loss on his products and playing his share in the process of liquidation and readjustment.

Reviews Work of Provincial Body

Horace Boultbee of Toronto, secretary of the Ontario Retail Lumber Dealers' Association, spoke of the worth and work of the district or branch associations and how they were strong buttresses to the parent body. One important matter which had been taken up was draughting a new Mechanics Lien Act, the prospects of which seem favorable. The bill had been introduced during the past session and referred to a standing committee of the Legislature for consideration during the recess. This committee is composed of Messrs. Raney (Attorney-General), Rollo (Minister of Labor), Sinclair, Marshall, Hill, Price, Homuth and Swayze. Mr. Boultbee said that the new act was patterned after the one that prevailed in Ohio, where it gave splendid satisfaction and in every way afforded ample protection of the retail lumberman. He explained some of the features of the new bill, which have already appeared in the columns of the "Canada Lumberman."

Mr. Boultbee also took up the question of getting out an association plan book of houses and the exchange of credit information and various other matters which had come up from time to time. He spoke of the progress of the O.R.L.D.A., and how it was increasing in influence and importance and doing a good work for the welfare and prosperity of the retail lumber dealer. He advised the members of the industry to have confidence in one another, not to pass along mere rumors, but to investigate any stories which might prevail at the present time with regard to price-cutting and other allegations. Stability, unity and co-operation were necessary adjuncts in the management and administration of business at the present time.

Getting Out Plan Book Endorsed

The matter of getting out a plan book was then taken up and discussed and advocated in brief speeches by J. C. Scofield, Geo. H. Belton, T. C. Warwick, and others. It was moved by G. H. Belton and seconded by T. C. Warwick, that the Ontario Retail Lumber Dealers' Association consider the advisability of getting out a book, showing floor plans and elevations of dwellings, and also giving the full bill of materials required in connection with each house.

The closing business included the passing of a resolution of condolence to the family of the late John Piggott of Windsor, whose sons are members of the South-Western Ontario Retail Lumber Dealers' Association.

A. R. Sanders and J. C. Scofield moved that a hearty vote of thanks be tendered to the Sarnia lumber dealers for their hospitality and entertainment. This was received with hearty applause.

Mr. Scofield, vice-president of the Ontario Retail Lumber Dealers' Association, stated he had a letter from E. M. Barrett of Ottawa, president of the O.R.L.D.A., wishing the members of the South-Western Association every success and regretting his inability to attend the meeting owing to a previous engagement.

Closing Agenda of the Day

George H. Belton of London, gave an interesting report of the recent trip which he had taken along with his brother, Chester H. Belton, of Sarnia, to British Columbia, Salt Lake City, Denver, Chicago, and other points. Mr. Belton spoke of the fine class of timber which British Columbia possesses, and told of the cordiality with which they had been received by the various manufacturers in both the mountain and coast districts. Some of the mills in British Columbit were operating while others were closed down.

John McGibbon of Sarnia, a member of the executive, who is widely known throughout Western Ontario, was called upon to say a few words and expressed his pleasure at having so many visitors in Sarnia and trusted that their stay would be both enjoyable and profitable.

Adjournment then took place, and it is understood that the annual meeting of 1922 will be held in Windsor, an invitation having been presented by the lumber dealers of that city and accepted.

At 6.30 o'clock a banquet was tendered the visiting dispensers of wood products in the Sarnia Chamber of Commerce restaurant. E. C. Barre made an admirable presiding officer and everything passed off delightfully. Splendid music was contributed by an orchestra and during the evening songs were sung by Ross Wilson of Port Huron, and C. G. Heiby of the Mueller Mfg. Co., Sarnia.

The Menu Cards Were Original

The menu cards were decidedly unique and got out in the form of a blueprint, entitled "Plans and Specifications of the Programme and Dinner of the South-Western Ontario Retail Lumber Dealers' Annual Meeting, Sarnia, Chamber of Commerce, April 27th, 1921." The speeches and programme came under the head of "plan." On the opposite page the following appeared.—

Specification
for
The Furnishing, Disposition
And Completion
of
Dinner to
Retail Lumber Dealers
Fine Common & Better Soup
Fried Fish Potato Balls
Free of Knots
Celery Olives
Lobster Salad
No. 1 Cuts & Better, Young Roasted & Stuffed
Vegetables
Mashed Potatoes Green Peas
Dessert
Apple Pie Ice Cream
Tea Coffee Cow Brand Milk

On the back of the original programme were the names of the members of the entertainment committee, E. C. Barre, John McGibbon, C. H. Belton, W. A. Saurwein, L. H. Richards. On the page were shown several lumbermen's tools.

Short addresses were made during the evening by Mr. Barre, W. H .Kenny, president of the Sarnia Chamber of Commerce, Horace

Boultbee, Toronto; G. B. Van Blaricom, Toronto; George H. Belton, London; Neil Watson (the Mayor of Mull), while C. H. Belton led off in the singing of the various choruses. The principal speaker of the evening was R. C. Restrick, of the Restrick Lumber Co., Detroit, who delivered an admirable address on trade conditions, the increasing cost of doing business, and the outlook in the lumber arena, particularly in the Detroit section. Mr. Restrick's address will be found in another column of the "Canada Lumberman."

The Roster of the Retailers

Those who attended the annual meeting were: George N. Kernohan, London; W. J. Green, St. Thomas; John T. Wallace, London; Gordon E. Longfield, Mount Brydges; Wm. H. Longfield, Mount Brydges; M. R. Bogart, Chatham; E. C. Russell, Walkerville; T. C. Warwick, Blenheim; W. R. Stephenson, Appin; A. R. Sanders, St. Thomas; B. F. Clarke, Glencoe; J. C. Scofield, Windsor; George H. Belton, London; S. Herath, Ojibway; D. D. Dagneau, Chatham; Chas. Hubbell, Thamesville; E. C. Poisson, Ford; T. J. Doyle, Chatham; W. A. Taylor, Ridgetown; J. McGibbon, Sarnia; G. D. McPherson, Merlin; C. H. Belton, Sarnia; Walter C. Laidlaw, Toronto; Wm. T. Conklin, Kingsville; H. S. Ludlam, Leamington; Neil Watson, Mull; Allan Hale, London; H. Boultbee, Toronto, secretary of the Ontario Retail Lumber Dealers' Association, and G. B. Van Blaricom, Toronto, editor, "Canada Lumberman."

Retail Lumbermen Consider Millwork Costs

Working Basis Submitted at Annual Meeting of Southwestern Association—Factories are Being Run at Loss or on Too Small Profit at Present Prices

The subject of costs is always interesting and many a business has gone down and under owing to the man at the head of it not being familiar or conversant with just what constitutes costs. There is no topic more vital and important to the retail lumber man than mill work costs and none on which a wider divergence of opinion prevails. The subject has been discussed at several meetings of the Southwestern Ontario Retail Lumber Dealers' Association. At a session held at Chatham in March, a special committee of the Association was appointed to consider and deal with mill works costs. This committee, composed of M. R. Bogart, of Chatham; L. H. Richards, of Sarnia; John T. Wallace, of London, and B. F. Clarke, of Glencoe, presented their report at the annual meeting of the S.W.O.R.L.D. Association, held at Sarnia. The report, which was read by Mr. Bogart, was as follows:—

> In the first place we have only considered such items as generally effect all members of the Association, such as inside and outside door and window frames, feeling that with these essential items on a proper basis, the better grades of mill work such as stairs, panelling, etc., will naturally adjust themselves.

Each member of the committee gave the subject considerable attention and worked out the costs in each factory individually and on meeting together were surprised at the similarity of their results and, therefore, feel that the figures shown represent the actual facts. Facts, with which we as mill men are sufficiently familiar.

All estimates on outside frames are based on using white pine throughout and all frames are figured assembled or built up.

The costs arrived at and agreed upon are as appended, and we are indebted to Mr. Richards for printing them.

The question of trim has not been considered as it is simply a matter of computing casings, etc., per lineal foot from any of the published wholesale lists, and which costs plus freight should represent our own productive costs on these items.

Your Committee also found in this connection that nearly every mill had a different system of supplying such trim so that no set cost could be shown.

Please bear in mind that **the prices shown are costs and do not include any profit whatever.** This must be added and can only be determined by each individual dealer.

Your Committee were a unit in expressing the opinion that, under present conditions and prices, our factories are being run either at a loss or on altogether too small a margin of profit, considering the investment involved, being merely an adjunct to our yards, and recommend that some effort be made to place the factory upon a more profitable footing so that it can stand independent of the yard as regards profits.

Under existing conditions the yard man who has no mill, and is buying his mill work from a nearby factory has a more remunerative investment than the man who has the drag of a factory upon his hands, a condition which, in our opinion, should be remedied.

Factory Costs Report

The figures submitted by the Mill Work Cost Committee were as follows:—

Window Frames—

For either frame or brick veneer wall up to glass width of 30 in.

19 ft. B.M. White Pine in jambs, head, etc., at 10c.	$1.90
Mouldings: 16 ft. Blind Stop, Wt. Pine, 1½	.24
16 ft. Parting Stop, Wt. Pine, 1½	.24
16 ft. O.G. 1¾ Stop, Wt. Pine, 1½	.24
16 ft. Brick Mldg., Wt. Pine, 3	.48
	3.10
15%lumber waste	.46
4 pulleys	.40
Machine work and assembling	1.25
Nails and screws	.12
Cambers and braces	.50
50% overhead cost on labor	.63
Total cost	$6.46
The price of $100.00 per M on Wt. Pine lumber in jambs, etc., has to take care of difference in sizes of jambs, etc.	
Window frame for solid brick wall, add	.50
For same window frame for glass width over 30 in. and without transom bar, add	2.25
Double or mullion frames	Double above prices
Triple frames	3 times above prices

Casement Window Frames—

Cost based same as above, say for glass size 24 in. x 30 in. 1 lt.	$5.90

Sash and Doors—

Cost on these not gone into, owing to the complete information in Sash and Door Association Catalogues, showing actual cost to us.

Outside Door Frame—

24 ft. B.M. Wt. Pine in jambs, at 10c.	$2.40
18 ft. Brick mldg., at 3c	.54
Cambers and braces	.50
Nails, etc.	.10
15% waste on lumber	.44
Labor, machine and nailing up	1.25
50% overhead on labor	.65
Total cost	$5.88
If 2 in. oak still add	$1.00

Inside Door Frame K.D. With Stops Supplied—

18 ft. R. 1 x 6 Clear Y. Pine, 9 ft. at 10c	.90
18 ft. R. Stop 1¾ Pine, at 2c	.36
	$1.26
15% waste on lumber	.30
Labor	.40
50% overhead on labor cost	.20
	$2.16
For arch jamb, add	.50
For 2 in. rabbetted jambs, same basis	2.40
For 2 in. arch jambs, add	.75

Cellar Window Frames—

12 ft. B.M. 2 x 8, 16 ft. B.M. Wt. Pine, at 10c	$1.60
4 ft. B.M. oak strip	.15
15% waste on lumber	.26
Nails	.10
Actual labor paid	.75
50% overhead on labor cost	.38
	$3.24
For coal chute frame with oak sill, add	$1.00

John Anderson, ex-M.L.A. said to be the oldest Free Mason as well as the oldest retired politician in Canada, died lately at his home at The Barony, situated in York County on the St. John river, about 40 miles west of Fredericton. He had not suffered from any disease but had been failing because of his advanced age and death was due to senile debility. He was aged 99 years.

Besides operating a large farm at the Barony, Mr. Anderson for many years carried on extensive lumbering operations on the St. John river and its tributaries. Hard work agreed with him, and even after he had passed the four score mark he drove timber rafts from his home to Springhill.

Customer Not Satisfied With Olden Ways

Today He Wants to Know What is the Best Lumber for His Particular Requirement, and the Whys and Wherefores—More Effective Merchandizing in the Retail Arena

*By R. C. Restrick (Restrick Lumber Co.), Detroit, Mich.

I asked one of my neighboring lumbermen the other day how his business was going. Much to my surprise, he replied—that things were looking up. Of course, I perked up my ears hopefully at this sort of encouraging reply, only to have the cheer dashed out by his further caustic remark—that naturally the situation was looking up. How could it do anything else when it is flat on its back. This, of course, is the great trouble of the day—the low volume of trade. These are not hard times—it is just that things are not quite as soft as they were.

To go back into history, with which you probably are familiar.—Last spring we were all enjoying a very wonderful business. Then it was not necessary to put forth much effort to sell lumber, but merely a problem of keeping a supply sufficient for the seemingly ever-increasing demand. We all became nothing but "order takers." However, about September of last year, on account of the low ebb of the banking resources of the country and the inflated building values, the financial world curtailed loans for construction purposes. Building began to slow up and the yards found themselves with large stocks of high-priced lumber on hand. They stopped buying and the over-expanded wholesale market fell like a barometer before a severe storm, until at the time of inventory, prices had fallen off nearly 50 per cent. from the peak of the late spring. In the meantime, the retail price followed the market downward and building was practically at a standstill. This condition necessitated a severe inventory loss, and placed several firms in a position where they were obliged to realize on their stocks to meet their outstanding indebtedness. This, of course, further depressed the retail price until lumber was being sold at less than cost. In the face of this situation some of the Detroit lumbermen began to analyze their costs and give the problem serious thought.

How Cost of Operation Ascends

We found that last year our volume of trade was about twenty millions. On account of a 40 per cent. deflation in prices, this figure would be reduced to twelve millions and further reduced in feetage about one-third, leaving us about an eight million volume of business for the present year, or less than one-half of last year's business from a dollars and cents standpoint. In reviewing our costs basis on percentage of expense to sales, we found that the average cost of operation in 1919 was 24.7 per cent., which increased to 31.4 per cent. in 1920, and jumped to the astonishing figures of 67.2% in January, 51.5% in February, 47.1% in March of this year.

With this situation confronting us there were, theoretically, three courses to pursue. To cut out one-half of the yards, reduce expenses by one-half or raise the price. Practically what we did do, however, is to sell a lesser volume at an increased rate of expense (percentage of costs to sales) at a less margin of profit.

Cost Per Thousand in Handling

You might be interested in knowing the percentages of costs in different cities and the cost per thousand of handling lumber, and I am going to ask you to bear with me a moment while I read the tabulation of these figures for the period of 1920:—

Minneapolis	24%	$14.00 per M
Buffalo	25%	16.00 " "
East St. Louis	19%	13.50 " "
Kansas City	24%	14.00 " "
Cincinnati	21%	12.75 " "
Erie	22%	13.50 " "
Toledo	25%	$16.00 per M
Pittsburg	23%	15.00 " "
Detroit	31%	19.50 " "

We found, in comparing costs, that our Detroit percentage was the highest of this group of cities, but on investigating the matter, found that Babson's cost of living table, placed Detroit at 2.18% for that year as compared with the average of cities named of 1.50%. This was based on a comparison with the normal pre-war purchasing power of the dollar.

Our great problem, however, is the small volume of trade which has made our costs out of all proportion, due to overhead, which cannot be cut down and hold an organization together. The only permanent remedy is increased building activity. To stimulate building business, we must restore the confidence of the public, but before we can do this, we must first restore confidence in each other. I do not know of a better way than through association work. The getting together at a meeting like this one helps. We find in Detroit that we are feeling much better towards one another since we have been meeting at luncheon once a week, just to put our feet under the table and talk over our game of golf with our competitors. Speaking of golf, we are arranging for a series of golf parties—among other places, we hope to have the pleasure of playing on your Windsor course, at the Essex Country Club.

Building Up Unity of Interest

And then the unity of interest built up by the association knits the different units together. We have incorporated, in our Association office, a Stock Exchange Department, which enables any one yard needing a waggon-load of a certain stock to be put in immediate touch with some other yard having a surplus of this item. We have also a Credit Bureau where credit information can be obtained on practically all the Detroit contractors. This department has also organized meetings of the Credit Men of the different yards every two weeks for discussion of their particular problems.

Our Legal and Collection Department furnishes this service at cost. Along the lines of knowing costs, our Association has made arrangements with the Mill Work Cost Information Bureau, of Chicago, who have, through the actual experiences of over four hundred mills, established a system of costs applicable to mill work, to conduct a class each week for our estimators. These classes are well attended and much interest is shown.

In an effort to stimulate trade, the Association conducted a prize contest among the younger architects in the city, known as the "Thumb Tack Club," for the best six drawings of small houses, to be not over 12,500 cubic feet, especially adapted for 30 ft. lots. This brought forth about 30 very clever drawings.

Better Merchandizing of Lumber

Just a word about merchandizing lumber. In the good old days a customer was satisfied with just lumber, but now he wants to know what is the best lumber for his particular requirements and the whys and wherefors. To illustrate the interest that the public is showing in building, we have just put on a Building Show in Detroit, which was attended by over one hundred and twenty thousand people. Along these lines our firm has established a Builders' Service Bureau, by means of which we are endeavoring to give the prospective builder all the information possible in regard to building, to help him to overcome his individual building problems, and to put him in touch with reliable contractors who are best suited to erect his type of home. I firmly believe a firm who is giving real service in merchandising his product will prosper most during the coming year.

*Address delivered at the annual meeting in Sarnia of the South-Western Ontario Retail Lumber Dealers' Association.

Quebec Lumberman Will Reside in Victoria

Henry B. Billingsley, Quebec, P.Q.

Henry B. Billingsley, of Quebec City, accompanied by his wife and four sons, left recently for Victoria, B.C., where he will reside in the future. Owing to ill-health he has been obliged to retire from the lumber business and depart from Quebec. Mr. Billingsley is a former director of the Canadian Lumbermen's Association and enjoys a wide measure of respect and esteem. Arriving in Quebec from Montreal some fifteen years ago he took up his abode in what was then known as Montcalmville. He served a term in the council and was then promoted to the office of Mayor, which position he held until the town became annexed to Quebec City. During his civic regime many improvements were carried out. He also served on St. George's School Board and was a member of the Canadian Club and other bodies. Mr. Billingsley was manager of the old lumber and timber firm of J. Burstall & Co. during his residence in Quebec City and a partner in the company for several years. Before coming to Quebec he served in the Montreal end of the business for nine years, his family having been identified with the same house for three generations or about ninety-three years altogether. He was also identified some years ago with Quebec's old Cavalry Corps—the Queen's Own Canadian Hussars, was a member of the Quebec Golf Club, the Garrison Club, the Quebec Curling Club, etc.

Until recently Mr. Billingsley was known by the name of H. Billingsley Poliwka, but in order to simplify life matters, and by Act of Parliament, the latter name has been replaced by his former middle name, which was also his mother's maiden name.

Northern Town Backs Up Lumber Company

There is considerable feeling in some quarters at Fort Frances, Ont., over an alleged threat by Premier Drury to cancel the timber licenses of the Shevlin-Clarke Company. More than 100 business men recently waited upon the town council of Fort Frances to emphasize the serious effect upon the town and district of such a course.

The council unanimously endorsed a resolution to be forwarded to the Provincial Government, setting forth that in its opinion any action that would cause the Shevlin-Clarke Company to withdraw from the district would be "an absolute calamity at this time." It points out that the company annually expends about $2,000,000 in wages within the district, and resents the action of the government, which, it says, prejudices the issue now before the courts.

Short Jottings of General Interest

A new sawmill is being built at Squamish, B.C., to replace the one which was destroyed by fire last year. W. F. Dixon, who is head of a group of Squamish business men, who have purchased the interests of Gibson, Merrick & Lindsay of Vancouver, was in Vancouver recently to purchase machinery for the new plant. The mill will have a capacity of 12,000,000 board feet annually and will be equipped with a double rig and will have a combined capacity of 100,000 feet daily. It is expected the plant will be in operation about the 1st of June.

A recent despatch from Nelson, B.C., says: A Canadian company, the Lindley Bros., has just completed 900 feet of rock tunnel and flume around and over the gorge and 15-foot falls of the Manoaklin, thereby opening up the forest products of the great Fire Valley to the outside world.

The Canadian Robert Dollar Co. has completed negotiations for the purchase of 250,000,000 feet of timber at Deep Bay near Union Bay on Vancouver Island. The limits have been acquired from the receiver of the Burrard Lumber Co. The transaction involves approximately half a million dollars, and the new area will add considerably to the timber holdings of the Canadian Robert Dollar Co. With the Port Moody limits and a tract it has been logging at Union Bay, the company will have 465,000,000 feet of timber. All the logs will be sawn at Dollartown.

K. J. Burns, manager for the Canadian Robert Dollar Company, and F. Clendenning, foreign freight agent for the Canadian Pacific Railway Company, recently returned from the trans-pacific conference at Seattle. The only thing worthy of mention that took place at the meeting was the decision to increase the lumber rate to the Orient. The new scale will go into effect on July 1 and will be $12.50 a thousand. The present rate is $10.

A two-days' conference was recently held in Regina, Sask., when agents of American silo firms met representatives of the Beaver Lumber Co. R. J. Gorley, general manager; A. A. Sykes, credit manager; A. L. McNicol of the Winnipeg staff of the Beaver Lumber Co., and about 40 agents from Saskatchewan were present.

Indicative of an early summer, New Brunswick's first forest fire this season was reported to the Department of Lands and Mines on May 7. The first forest fire reported last year was on May 16.

Timber Trade With Far-away Egypt

A comprehensive report has been compiled by W. McL. Clarke, Canadian Government Trade Commissioner to Italy, who paid a recent visit to Vancouver. Mr. Clarke points out Canada's opportunities for trade with the land of the Pharaohs and advocates business between leading interests there and the Dominion in lumber as well as paper. A permanent trade can not be built up by the latter, he believes, unless there is a regular steamship service. A poradic trade might be developed through New York or Liverpool, but it could not be sufficiently large to warrant attention. In view of the fact that during the war a large consignment of Canadian timber was sent to Egypt in 1916, there was great opportunity for the development of this business with importers in the East.

The report concludes with a list of articles imported yearly by Egypt "of interest to Canada."

A detailed report on every commodity imported by Egypt, together with the countries which have been supplying them in the past, is contained in the booklet. Valuable advice to exporters is also submitted.

Play the Game and Not the Name

"I like men who stand up and play the game honorably," said a leading lumberman the other day. "Of course, the fellow, who knocks a competitor, never meets with a large measure of favor. He is gradually passing out so far as actual denunciation and condemnation of his opponents are concerned. He is now proceeding in a new way to gain his selfish ends and convey nasty impressions.

"In the present scurry for orders there is, naturally, keen competition, and even when only a small quantity is required, it is found that retailers are getting prices from a large number of firms.

"Now," declared a leading Toronto wholesaler lately, "I know of two or three firms who, when they find a retailer has given an order for certain stock and that it is, possibly, on the way, will turn round and quote from $2.00 to $4.00 less per M just to make the purchaser sick, if they can, or to convey the impression that he has been an easy mark and paid too much for what he is getting. Of course, only a few of those who are quoted lower prices, pay attention to the seductive proposition knowing that decreased figures are named simply for a purpose, and in the face of the fact that a sale is not likely to be made. Still there are some who will swallow any bait, and the unscrupulous salesman puts it across. The retailer immediately gets after the concern from whom he has bought saying that he has been charged too much, as he can buy the stuff from so and so at $2.00 to $5.00 less per M and he wants to cancel his order.

"This is one way of creating disturbance and annoyance and another is the mean underhand habit of saying: 'Oh! You bought this from Brown! Ah, yes! I know him very well, but, of course, he is merely a commission man.'

"Now practically every wholesaler is a commission man. Even the largest manufacturers buy stock to supplement what they have and cater to the varied needs of customers. If one is going to split hairs over the exact definition of a 'wholesaler,' it will be found that practically all wholesalers, in fact all lumbermen, disposing of mill products are commission men. They do not manufacture all they dispose of or handle, by any means, and naturally buy some stuff to turn over to others. It is thus that business is carried on, but to speak of 'Brown, the commission man,' in a suggestive, slurring accent, is going far afield to do a legitimate wholesaler a gross injustice, and convey a misleading opinion regarding the strength and standing of a man or a firm.

"There are many other faults that certain salesmen possess, but the foregoing are quite noticeable and seem to have cropped up a little more during the past few months than any other shortcomings," concluded the speaker.

What Lumber Manufacturer is Up Against

Leading Ontario Lumberman Recounts Story of Growing Costs and Other Problems Which Producer Faces—Comparative Figures for Supplies, Food and Wages

Mr. E. C. Barre, general manager of the Cleveland-Sarnia Saw Mills Co., Limited, Sarnia, was invited to be present at the recent annual meeting of the South Western Ontario Retail Lumber Dealers in Sarnia and address the gathering when the subject, "Is white pine too dear; if so, why?" came up for discussion. President Wallace extended a hearty greeting to Mr. Barre, who was given a cordial welcome. The latter expressed his pleasure at meeting so many representative retailers of Western Ontario, and would endeavor to shed as much light as possible on some of the difficulties which the manufacturers of white pine had to contend with today. Those not conversant with the various details of converting the tree into the finished product little realized what the logger and millman had to encounter.

During the past few years the cost of everything which entered into the production of lumber had advanced tremendously. The lumberman's charges came under the headings of stumpage, ground rent, crown dues, logging (which included the operation of cutting down the tree, skidding, hauling, driving, towing, etc., to the foot of the jack-ladder of the mill). Then came the cost of sawing, piling, loading, insurance, etc., as well as the recent heavy increases in freight rates. There was also the boarding of the men, the heavy

E. C. Barre, Sarnia, Ont.

outlay for supplies and many other things which had to be taken into consideration. Mr. Barre said he would endeavor to deal with these briefly so that they would be able to appreciate that the manufacturer today had no bed of roses. Stumpage, which a few years ago had been from $5 of $10 per M. feet now had gone up as high as in some cases closes to $25.00 per M; in fact, he understood that one firm paid close to $25.00 for timber some few months ago. Then there was also a ground rent paid of $5 per square mile, and crown dues of $2.50 per M feet, log scale, all of these levies finding their way into the provincial treasurer to help reduce the expense of government. On top of this the lumberman had to pay 1c per acre per annum for fire ranging, which amounts to $6.40 per square mile. The carrying charge in the way of interest and investment on a township containing 125,000,000 feet of white pine was very heavy, declared Mr. Barre, and, in his opinion, would involve an expenditure of about $750,000 or more.

The Angle of Wage Problem

Referring particularly to the matter of wages Mr. Barre said that up to 1914 the average lumberjack had received $30.00 a month and board. From this date up to December 15th, 1919, wages had steadily increased, and the wages of woodmen had been $65.00 to $75.00 a month and board and this had continued throughout the winter of 1919-20. Last fall the wages for lumberjacks had jumped fully $10.00 per month, operators paying $75.00 to $80.00 and board. After the 15th of December the pay of the men had been reduced to $50.00 and $75.00 per month. Practically the greater part of the work had, so far as cutting was concerned, been completed by December 15th. It was not necessary to retain as many men in the camps to carry out operations; in fact, the force could be reduced by one-third after the cutting was completed, but it would be seen that the highest wages had applied to the largest number during the season, so that the saving did not amount to a great deal to the manufacturer. The companies, therefore, had not gained so very much as far as the labor was concerned.

Mr. Barre pointed out that logging concerns paid during the past season,—cooks $150.00, blacksmiths $150.00, foremen $165.00 to $175.00, and other skilled help in like proportion. The speaker declared that the logs of all white pine manufacturers were to-day costing them from $2.00 to $4.00 more per M to bring to the foot of the Jack-ladder than it did in 1920. In the line of provisions the only things that were cheaper during the past season than a year ago were oats and potatoes. Hay had cost $30.00 to $35.00 per ton, delivered at the railway station.

How Cost of Supplies Have Ascended

Mr. Barre then pointed out that costs had gone up in a large number of other lines just as much as in the matter of wages. Long clear bacon was to-day 23c a lb., oleomargarine 33c a lb., cow beef 15c a lb. and tea 40c a lb. Before the war, long clear bacon could be bought at 6c, 7c and 8c a lb., beef 5c to 6c a lb., hay $10.00 to $11.00 per ton and tea at 18c a lb. Mr. Barre then detailed the advances in the cost of other supplies which were as follows:—

	1910 to 1914	1920-21
Six-foot cross-cut saws, per dozen	$43.00	$84.00
D. B. axes. per dozen	9.50	22.00
Peevies, per dozen	12.00	40.00
Rope	12c	25½c
Pike poles, per dozen	17.25	54.00
Harness	33.00	96.00

Continuing, the general manager of the Cleveland-Sarnia Sawmills Co. stated that some years ago the cost of driving logs from a certain point to the mouth of the Spanish River was 5c per M, and to-day the cost of driving logs under the same conditions would be from 75c to $1.00 per M, but you must understand that there is no lumberman to-day getting his logs driven down the river for 75c or $1.00 per M, for in the past few years the lumberman has had to go back 50 or 60 miles and in some cases farther and in place of driving logs for 75c per M now costs from $2.50 to $3.00 and $4.00. In looking at a map, covering the limits of certain lumber companies, it might be said that such and such a territory was a nice place in which to log, but in the case of his own organization they had spent $17,000 to build a tote road to get over six miles of hilly country. He did not see how white pine was going to be cheaper without the manufacturer having to take a big loss on his output of to-day. All manufacturers were taking a loss at the present time and were doing their share in the matter of readjustment and deflation.

Working Together on United Spirit

Mr. Barre hoped that all branches of the lumber industry would work together in meeting the problems, that were now presenting themselves, in a united spirit and harmonious endeavor to bring about a stabilization of conditions,—not the feverish, inflated quotations which had held sway in the year of 1920. No one wanted to see a return to such a fictitious and abnormal condition of affairs, but all would like to see an improvement in the market and greater equalization brought about; a situation on which producer and consumer could depend and wherein supply and demand would be more evenly divided.

The manufacturer of lumber always had to gamble with the future. The very nature of his calling required this, and those who had carried on woods operations during the past winter were taking chances on conditions 18 months ahead of time. "The logs," added Mr. Barre, "which we cut during the past winter, will get to you retailers in the shape of white pine lumber in 1922, so you see how far the producer has to look ahead. He has very heavy carrying costs to bear before he can realize anything on his finished product, and any reduction that applies to wages, materials and supplies, has to be carried into effect a long time before the lumber operator can realize the benefit of such recessions."

Romantic Lumber Days in Quaint Old Quebec

When Ancient Capital was Once Centre of Timber and Lumber Export Trade of Dominion—Firms Which Flourished a Generation Ago—Interesting Incidents

The present temporary dullness in the Canadian lumber trade, and the remarkable fact that the navigation of the St. Lawrence has been open to shipping for six weeks from the port of Quebec to the sea, not one vessel has been chartered to carry lumber overseas to the European markets up to the present. The present situation in comparison with the past, recalls to the mind a vision when Quebec City was until comparatively recent years the centre of the timber and lumber export trade, and when Quebec was sought after by the lumber interests of Western Canada to advance the necessary financial assistance to carry on their operations in the woods.

The first timber that was shipped from Canada to Europe was exported under the French regime in 1667. The export to England began in the early days of the nineteenth century when the continental ports were closed against British trade by Napoleon. The trade grew rapidly and when at its zenith, as many as 1,600 square rigged sailing ships entered the port of Quebec yearly to load timber. It reached its climax about 1864, in which year 20,032,520 cubic feet of square timber was exported, and since then it gradually declined, owing to the manufacture of deals in the mills in Canada instead of in England as previously.

Formerly shipments of pine deals were extensively made from Quebec. In 1880, 5,823,263 standards were shipped, but a great part of this trade has since gone to Montreal, the port nearer the western Canadian mills. The palmy days of Quebec City as a timber port, were also characterized by activities in shipbuilding, forty or fifty wooden ships sometimes being built in a year. At one time this port gave employment to five or six thousand laborers. The timber coves were extended for a distance of ten miles on both sides of the river. Now barely a mile on the Quebec side is so occupied, with one or two coves across the river.

It is interesting to note the decrease in the number of sailing vessels now clearing at Quebec. The sight of one has become a curiosity, as the traffic is now entirely carried on by steam. The disappearance of the wooden sailing ships have also removed the romance of the timber trade in the early days. Then the harbor of Quebec, with its forest of masts, lent an aspect and color to business activities and scenes linked with the Canadian port, never again to be reinacted. Ships came from every foreign part of the world, flying the flags of all nations. Crews were to be seen in their distinguished native dress lining the streets, in the taverns, the sailors' boarding houses and dance halls.

Then there was the scene of the big rafts of timber guided by the raftsmen who had worked in the woods all winter. They drew their wages in Quebec and then allowed themselves to go loose on a rollicking time. St. Peter Street was the commercial centre of attraction, which was crowded from morn until late in the evening with a truly cosmopolitan aggregation of humanity and where ships were chartered in this street and many exchanged hands. Here merchants, shipmasters, ship handlers, stevedores, and towboat owners mingled together and carried on business. Everything was done in a regular business manner and everybody knew where to locate his men. Even the telegraphic messenger boys were to be seen running hither and thither calling out names of business men and ship captains to reach them and deliver the telegrams.

It was a scene to be remembered by those who lived in those good old days of the timber trade in Quebec, now buried in the oblivion of the past, never again to return. It is now well to complete the physical features of the former-day timber trade in Quebec by a sketch of those who carried on the administration for its development, individuals and firms who were prominent. Many of them have since joined the majority, and some of whose names still live in the firms now doing business.

Early in the nineteenth century the English Government sent several practical men to Canada to procure timber for shipbuilding. One was Peter Patterson, who later in connection with Henry Usburne in the year 1811 purchased land on the site of the famous Montmorency Falls near the city of Quebec and conducted business for a period of forty years, when he died and was succeeded by the late George Benson Hall, who conducted six mills and died in 1876, and to-day nothing exists but the ruins of wharves to mark the once great lumber mill establishment. Mr. H. M. Price, who pulled down the Hall mines for the erection of a cotton mill, has also passed away.

The firm of Hamilton Bros., founded in 1811 by George Hamilton, no longer exists. Mr. Henry Atkin carries on the two lumber establishments on the Etchemin River founded by Sir John Caldwell. The Bushey lumber mills, built in 1846, on the Chaudiere River, are still in existence and in control of the Bushey family.

The King Brothers, who played an important part in Canada's lumber industry, with headquarters at Quebec, established in 1879, have all passed away. The last surviving member of the firm of W. & J. Sharples, founded in 1830, in the person of the late Hon. John Sharples, has been succeeded by the sons and employees of the late Mr. Wm. Power, who continue to carry on the business under the name and style of W. & J. Sharples, Reg. The firm of John Burstall, founded by the late Henry Burstall in 1832, is being continued by a nephew of the founder, John Burstall.

Nicholas Flood, one of the oldest operators, has passed away, and with him his business. The firm of Price Brothers, one of the most important in the Dominion with mills in various parts of the province, was founded by the late Mr. William Price in 1840, who left an immense business to his sons, the last of whom, Hon. E. J. Price, was succeeded by his nephew, Sir William Price. In the latter part of 1904 Sir William converted it into a limited stock company and since then has added very largely to the business operations, including the building of pulp and paper mills.

The firm of T. B. Synes & Co., no longer exists. This firm was established in 1840 and the last member, the late S. F. A. Knight, wound up the business over 30 years ago.

The W. J. C. Benson Co., in its time one of the largest shippers in the port, was wound up in 1890. The firms of Henry Fry & Co. and many others have gone out of existence.

D. R. McLeod, for over a half century a broker between manufacturers and shippers of timber, has been claimed by death and left no successor. McLean, Kennedy & Co. are still carrying on business, likewise the firm of H. R. Goodday & Co.

Such is a short sketch of the past and present history of the timber and lumber trade in Quebec City that a half century ago held the premier place in the Canadian trade and was so recognized by the business world.

John Maloney Joins Silent Majority

John Maloney, a well-known lumberman, died recently at his home in Rogersville. He was confined to bed only a short time but had not been in good health for a year or more.

Mr. Maloney had been engaged in the lumbering business all his life, working up from a small beginning to a place among the largest operators of the province. At the time of his death he was on the board of directors of various boom companies of the Miramichi. Of a genial and kindly disposition, he made friends with all with whom he came in contact.

The deceased lumberman was 66 years of age and is survived by his wife, five daughters and two sons, J. W. of Newcastle and Patrick of Rogersville.

The funeral of the late Mr. Maloney was very largely attended, practically all the lumbering interests on the Miramichi being represented. As a mark of respect, the schools and places of business were closed. The floral offerings were numerous and beautiful.

Paying a tribute to the deceased, Rev. Dr. A. Babineau, who spoke in Rogersville R. C. Church, said that Mr. Maloney had during many long years displayed great charity and taken a deep interest in the welfare of the country and people.

Has Been Busy in Timber Estimating

P. D. Coolidge, forest engineer, of Bangor, Maine, states that he had a very busy winter notwithstanding the slackness in pulpwood and in the lumber business. The larger part of the timber estimating done by him and his staff was in Canada. In Maine, the snowshoeing was found to be unusually good in the townships examined.

Mr. Coolidge states that much damage was done by the spruce budworm both in parts of Canada and in Maine, but that it is surprising how many portions of the Dominion have escaped loss from this pest. Mr. Coolidge is also of the opinion that the development of adequate fire protection is an urgent need for Canada if the supply of pulpwood and sawed timber is to be maintained for all the operating mills.

Something Specific in House Building

There is a disposition on the part of many who have anything to do with building to make lumber "the goat" so far as new structure is concerned. Nearly every man, who is thinking of construction, when asked why he is not proceeding at once with the project he has in hand, will reply that lumber is altogether too costly, as if this commodity was the chief element of the whole structure. In a great many cities in Canada solid brick or brick veneer houses are erected and the expenditure on them for lumber is only about one-fifth or one-quarter of the entire disbursement. In an ordinary frame dwelling house, lumber and millwork costs run possibly one-third of the total outlay for the building.

Just why the general public has the impression that the price of lumber precludes the possibility of building homes, it is difficult to state. The idea has steadily grown, and it is charged by certain lumber publications in the United States that a great Government Department at Washington is responsible for the misconception through the imposition upon the daily and weekly press of garbled extracts from a recent Forest Service report. To correct the misapprehension, an educative campaign is now being conducted by several journals, and figures are being printed, showing that on a frame house of average size, say 24 x 36, containing four rooms and a closet on the first floor and two bedrooms, a bathroom and four closets on the second floor, the total outlay, including the contractor's profits was $5,454.93. Of this lumber and millwork was $1,719.00, or 31 per cent. Here are the detailed figures, which may be of interest:

Painting—2 coats outside; 3 to 4 inside	$ 215.00
Plastering—555 yards at 80 cents	444.00
Heating furnace	290.00
Plumbing	590 00
Carpenter labor at $1 an hour	600.00
Electric wiring and fixtures	113.00
Grading and excavating	115.00
Mason work, cement cellar, sidewalk and chimney	535.00
Heavy and trim hardware	81.00
Gutter and tin work	40.00
Lumber and millwork	1,719.00
Contractor's liability insurance	
Incidental and office expense	12.93
Extra drayage and profit	

Cost of Construction and Cancellations

"During the year we have procured estimates of costs of construction upon identical specifications of a two-storey frame building in various cities in the country. This information is extremely interesting, showing that almost uniformly the lumber bill of this house represents from 10 per cent. to 14 per cent. of the total cost, and the mill work 10 per cent. to 14 per cent. additional. The remainder of the cost is represented by other building materials, and 68 per cent. of the cost of the majority of the bids represents building trades labor. As building material prices are beginning to show a tendency to follow lumber prices downward, the only way that building costs can be lowered is in labor, and the public may safely be counted on to compel building trades workmen to be reasonable in this matter and accept such reductions as are fair in the light of reduced living expenses," says J. E. Rhodes, secretary-manager, in a recent address, on the "Statistical Status of the Southern Pine Industry," before the annual meeting of that association in New Orleans.

Continuing, he remarked:—

"Reports from 686 savings banks show total deposits on December 31, 1920, of $5,535,389,904, or an increase of $474,760,804 during the year. This is a very marked increase for a year during which most of the business in the country was undergoing a decided readjustment. There is now more money in the savings banks of the United States than ever before. Insurance companies are loaning large sums of money for home building, and as soon as building costs are reduced to a point where a safe margin of equity is available, it is certain that a large amount of capital will go into construction of all kinds.

"As before stated, the manufacturing end of the lumber industry has already taken its liquidation. It is known that retailers of lumber have in many sections of the country made reductions in prices to the consumers, but there is bitter complaint that in many sections this has not yet been done.

"What the future of the lumber market will be is not for me to prophesy. I submit these statistics for such lessons as each individual may be able to draw from them.

"Manufacturers of southern pine suffered severely during 1920 by cancellation of orders which had been accepted by them in good faith, and which they were prepared to fill without delay. The cancellation evil disrupted to a large extent the normal process of the lumber manufacturing industry, as well as the plans of many producers.

"During 1920, 112 subscribers reported a total cancellation of 7,317 cars. Inquiry developed that, at least, 20,000 cars of orders for southern pine were cancelled during the year, representing approximately 450 million feet of lumber."

The Abitibi Power & Paper Co. of Smooth Rock Falls, Ont., have now developed 53,000 net continuous horse power. Within a few weeks the company's production of newsprint will reach 160,000 tons of paper a year. The earnings have risen to over $5,000,000 per annum. In connection with the recent issue of 8% sinking fund gold bonds, which a large financial house has been underwriting, it is stated that the results achieved could never have been brought about without the expenditure out of earnings and from the sale of additional securities of an amount sufficient to bring out the latent possibilities of the enterprise. It is also stated "that since this expenditure has been made results have more than justified the outlay, and it is now the part of wisdom to fund the company's floating indebtedness and reimburse it for part of this capital expenditure."

5-Roomed House Built from Foundation to Roof in Eight Hours.

In order to show just what could be done in relieving the housing situation, the lumbermen's association of Chicago, erected a five-room frame dwelling from the foundation to the topmost-shingle in eight hours. The work was started at seven a.m. and was ready for occupancy, with the exception of decorations, at 4.30 p.m. Houses of this type can be erected and sold for $3,500, according to the officials of the lumbermen's association. Thirty carpenters built the one-day house. The photo shows the house nearing completion.

Breezy Briefs From the Far East

The officials and employees of the N. B. Provincial Department of Lands and Mines are putting forth every effort to cope with the forest fire menace and thus prevent a continuance of last year's devastation in the valuable timber lands. Literature on the vital importance of protecting the forests is being circulated, warnings will also be displayed prominently against starting fires, throwing cigarettes and cigars about carelessly in the woods, etc. Last week a number of fires were reported along the C. N. R. Near Anagance Station there was a grass fire which swept through half a mile and damaged the fence, but did not work into the woods. There was also a grass fire along the Shediac branch line near Ccarouc.

The N. B. Advisory Board of the Department of Lands and Mines at a recent meeting gave considerable attention to matters pertaining to fighting forest fires.

The driving operations on the upper part of the St. John River are now well under way and it is expected that all of the logs will soon be in the main river. The drive of Randolph & Baker has been brought out of the Grand River and is now in the St. John. The logs of the St. John Lumber Company, cut north of Van Buren, has been driven to Keegan and are being sorted in the booms.

Logs have been arriving in the booms of the St. John Log Driving Company for about a week now, but are said to be in small numbers. The company believe that the main river drive will be limited to only one trip from Grand Falls to Fredericton. When it will be made is not as yet known and must be determined by the time it takes the individual operators on the upper river to get their logs in the main stream. Preparations, however, are being made to start it in three weeks. The drift drive, which has been operating between Fredericton and the mouth of the river is nearing St. John.

The Fraser Companies, Ltd., sawmills commenced operations on April 29 at Victoria Mills, in Fredericton, N.B. Only sixty-five men are employed. Last week Stanley Douglass, Ltd., started their mill at Devon, N.B., on a ten-hour day. From present indications many mills will be run on the ten-hour day and would indicate a collapse of the strike declared some time ago against the longer hours.

A five-masted schooner "Hjeltenars" sailed from the port of St. John recently for Queenstown with the largest deck load of lumber ever taken out of this port. She carried 1,135 standards of timber 2,200,000 feet, and had a deck load of fourteen feet or about 800,000 feet.

Elwood Burtt, who was in St. John recently, stated that he had no trouble with his men over the readjustment of the wage scale and working conditions at his mills in York County. They accepted a fifteen per cent. cut in wages and agreed to the ten-hour day.

Two large lumber shipments were recorded from the port of St. John within the last few days. The schooner Balsa cleared for New York with 540,747 superficial feet of spruce planks shipped by W. Malcolm McKay & Company; and the schooner Emily F. Nartham cleared for New York with 1,176,200 spruce laths shipped by Stetson-Cutler Company, Limited.

Handling Over Two Million Railway Ties

The Canadian Tie and Lumber Co., Toronto, during the season, which closes in September next, will have handled 2,500,000 ties. These are sold to railways, contractors, industrial plants and other concerns. The number handled is half a million more than the previous year and about 40 per cent. of the ties are jack pine, 15 per cent. cedar, 35 per cent. hardwood, and the remaining 10 per cent. hemlock and oak.

During the past season an advance of 10 per cent. to 15 per cent. in railway ties, went into effect, and a number of hardwood lumber operators, who saw the decreasing value of lumber, devoted their attention to sawing ties instead.

The Canadian Tie and Lumber Co. are the general contractors for all cross ties purchased in Canada for the Grand Trunk Railway System, and buy in all parts of Ontario, Quebec and the Maritime Provinces. Deliveries of ties are now being made to the company by a large number of firms and contractors, and during the past few days inspectors have been exceptionally busy at the different shipping points.

The contracts for switch ties and cross ties for the coming year will be made in October next. The outlook, notwithstanding quietness in certain centres, is regarded as favorable.

Canada Needs 158,000 New Houses

Canada could do with 158,000 new houses to-day, said J. M. Piggott, of Hamilton, at the Builders' Parliament recently in Ottawa. Many people were living in dwellings unfit for habitation; others were in small apartments when they could and would afford comfortable homes if these homes were available. The condition has now become so serious that governments throughout the Dominion should accept a greater share of the responsibility and seek a means of remedying them. They should also stimulate public works wherever possible.

There had been 11,117 houses built in Canada during 1920. In the same year there were 70,000 marriages. Immigrants numbered 117,336, of whom probably 50 per cent. were married, making a further requirement of 200,000 houses. J. A. Ellis, said Mr. Piggott, had estimated Ontario's house shortage at 20,000. The total house shortage for 1920 alone was 79,000.

Largest Load Hauled by Two Horses

The largest load of logs ever hauled by two horses is claimed by the camp employees of B. F. Underhill, who operate for the Shives Lumber Company on the Upsalquitch River, N.B. On March 10 preparations were made for the record-breaking achievement. The large bob sleds to which were harnessed Cap and Frank, one of the

finest teams of the Shives Lumber Company, were placed and then John Hyland of South Esk, Miramichi; Patrick and Edward Casey of Barnaby River, and Fred Smith of Charlo, all expert loaders, under the direction of B. F. Underhill, camp foreman, set to work. They piled on 350 logs, scaling 16,349 feet, and hauled it to the landing. The counting and scaling was done by John Farrer, head scaler of the Shives Lumber Co., and James Colwel of St. John. Eric M. Bamford and I. J. Underhill were the government surveyors. The figures were checked by John Redfern, an inspector.

Campaign Reveals Public Home Interest

The success of the "hardwood flooring weeks" which have been features of a special campaign on the part of both manufacturers and dealers in various cities in Ontario, reveals how much interest can be stimulated in the cause of better homes and better home furnishings. In each centre that the demonstration has been held, eager crowds have sought information, and the local lumber dealers, the hardware men who handle oils, stains, waxes, fillers, and finishes for the wood, and others, have secured a long list of prospective customers. These inquiries, if properly followed up, will, no doubt, result in a considerably augmented business for both the lumber merchant and the hardware man.

The question naturally arises if "hardwood flooring weeks" have done so much to kindle the imagination of so many probable patrons, what would not a practical building demonstration or exhibition do in the cause of having more homes erected in the various towns and cities of Canada. Expositions of this character have been conducted at many points across the border. Similar enterprises might be undertaken aggressively and profitably by lumber merchants, builders, supply-men, contractors, investors and others in several centres of the Dominion, which are suffering from a very real house famine.

Getting Real Firsthand Knowledge in Lumber

Alert Salesman Spends Several Weeks in Mills and at Hard Daily Grind—Talks Entertainingly on What He Has Learned—Different Kinds of Pine

Editor, Canada Lumberman:—

I started out on the road selling lumber for a western Canadian firm a couple of years or so ago. I had a theoretical or academic acquaintance with the industry but nothing practical, at least not since I had worked around a sawmill in Ottawa as a boy in my teens. I, therefore, resolved that I would not be under any handicap in the future but, at the first favorable opportunity, would get a practical insight into the product out of which I was making my living. Well, you know trade in the lumber line went very flat a few months ago, and I thought now is the time for me to get out and go through a few hard knocks in order to fortify and equip myself for future activities, so I came over from B. C. into W—— and now have a real job. My hands are blistered, my back aches, my muscles are sore, and during the first few days I seemed to be experiencing all the tortures of the D——.

Now I am a full-fledged "private" in the ranks of a mill, a real laboring chap instead of being a welldressed, optimistic lumber salesman. No longer do I stroll in leisurely at 9 o'clock and polish my unmentionables on a ball-bearing, swivel chair in front of a beautiful glass-top quarter-cut oak desk. At that hour, viz., 9 o'clock, I am exactly half through the forenoon's labor and wondering what has become of the huge (for me) breakfast that I tucked away at 6.30. At 7 o'clock I am in the mill and can now keep up at the work with any of "the boys." Of course, you might call my place a sort of student job, but eight or nine hours every day I carry lumber on my shoulders for the grader to pile.

Terribly Trying on the Muscles

For the first few days I was hourly renewing acquaintance with muscles in my arms and back that I had long since forgotten—also meeting some hitherto unknown ones. When I called the roll at eventide every little sinew responded. "Here, Here, Sir"—I mean ache! ache! here!!! However, it is easing off now. My arrangement with the company is to work with the graders and learn the grading, (sans wages), but the company puts me up at its boarding house where I get three meals, very good ones, too, a room and good spring bed, which I seek about 7.00 p.m. promptly. Rough grey blankets and the absence of sheets did not bother me the first few nights,—I was too tired to worry and now I am getting used to it.

This experience is really doing me good, both physically and mentally, and getting into intimate contact again with the actual lumber is greatly clarifying my understanding of the terms and phrases. When I get through the five or six weeks, which the superintendent here tells me will be all I will need (I have already been put, at times, on the actual grading myself) I plan to get in, if possible, into the M—— mill at S—— for a while as a sort of post-graduate course before returning home to B. C. Then if business does not require my immediate return to the office, I may try a month in one of the coast mills as a sort of clincher. After all that I won't be an expert experienced millman, but I will have a pretty good knowledge of the production end of the article that I am selling.

Having been on the road, I know what the essential things are that I require to learn, and don't let myself waste time on non-essentials. By not accepting wages from the companies, I feel at liberty, within reason, to pick and choose my work, so far as it co-ordinates with the general routine. Also I find the chief has passed the word down to show me, which is very decent of him.

The Game is Mighty Interesting

This lumber business is mighty interesting, isn't it? Far more so I think than any other thing with which I have been associated. By the way, I recently got a book from the Department of Interior, Ottawa, Forestry Branch, Bulletin No. 61, Native Trees of Canada, by B. R. Morton, B.ScF. It's a sort of primer on trees, well illustrated, simply and interestingly written and easily absorbed. I got it to read up about pine. I would like to, but feel far from competent to give you any literary contribution on pine, I suggest that you get someone who **really knows,** let me emphasize that, who **really knows pine of Canada, East and West;** one, who has a definite knowledge of the various commercial terms applied—and which often I find mis-applied, to supply an article on that subject. From what I learn, the existing facts are as follows.—The White Pine of Eastern Canada (Pinus Strobus) is the real white pine. It is also found in Wisconsin, etc., but is getting pretty well cut out.

In B. C. and Western U. S. A. among other pines are two outstanding types,—1st, White Pine, or better known as Idaho White Pine. The botanical name is Pinus Monticola, and it is for all practical purposes the same wood as the Eastern White Pine—Pinus Strobus. Westerners claim that it is better. It is found in the Central-Eastern portion of Southern B. C. and again scattered along the coast and on Vancouver Island—no individual stands but a few trees here and there. It is also found in Eastern Washington and Oregon and in Idaho.

The Various Species of Pine

In the mountain districts of B. C. and the northern states is found another type—Pinus Ponderosa, commonly known as Yellow Pine. The larger and better trees of this species, while having a yellowish heart comprising about one-third of the tree, have an outer portion or sapwood of a whitish color—very similar, indeed, to the real White Pine. Uusually this pine, which I shall for convenience call Ponderosa, is harder than Monticola and has a more decided grain effect. But trees vary, and I have several times recently been tested and failed to tell which was which of two boards, one Monticola and the other from the outer portion of Ponderosa.

Now the joker in the pack is this: Some of the mills producing Ponderosa, have, owing to the poor reception given to Yellow Pine (as it is confused with its close relative, the hard Bull pine) adopted the names Western White Pine or Western Soft Pine. Consequently an easterner, reading their advertisements and ordering on the name "Western White Pine," might get a shipment of this Yellow Pine—Pinus Ponderosa, when he was expecting the real western contemporary of his Eastern White Pine. I was tangled up myself at first in this confusion of terms—in fact, I tested out three of the graders here by asking them separately what they would send me if I forwarded them an order from the East for "Western White Pine." One man said he would fill it with Ponderosa; the other said he would send White Pine and, when pressed for a clearer answer he added that he would send Idaho White Pine. The third man, who had lived in Wisconsin, declared that, knowing where the order came from, he would ascertain which was really wanted before filling the order.

Of course, if the order read, "Idaho White Pine," there would be no doubt that Monticola was meant, but the confusion arises from applying the terms "Western White Pine" or "Western Soft Pine," to what is really the harder yellowish wood.

Yours, etc.,
TYRO.

Split Posts and Round Posts

Is a split fence post as durable as a round fence post? This is a question frequently asked of the U. S. Forest Products Laboratory. The fact is, one kind of post will last about as long as the other if the amount of heartwood is the same in both. But if the percentage of sapwood is increased by splitting, the split post will be less durable, and if the percentage of heartwood is increased, it will be more durable than a round one. Posts of spruce, hemlock, or any of the true firs are exceptions to this rule, because their heartwood and sapwood are about equally durable.

When posts are to be treated with creosote or other preservative, a round post is preferable to a split post, because of the comparative ease with which the sapwood can be treated. The heart faces on split posts do not, as a rule, absorb preservative well. Split red-oak posts will take treatment, because the wood is very porous, but the heart faces of split posts of many other species, notably white oak, red gum, and Douglas fir, resist the penetration of preservative, even under heavy pressures.

British Government Stocks in Canada

With regard to the British Government lumber stocks in the Quebec and lower port districts, the Associated Importers, Limited, of London, England, have appointed Messrs. Cox, Long & Co., Limited, 433 Coristine Building, Montreal, as their authorized agents in Canada. All inquiries as to any of these goods must be sent to Messrs. Cox, Long & Co., Ltd.

Quebec Men Say British Trade is Dull

The Quebec firm of Dobell, Beckett & Co. will continue doing business for some months to come before closing down altogether. The reason for the temporary continuation is due to the fact that this firm has been awarded a contract by the British Admiralty for the supply of timber: waney pine and rock pine for 1921. The firm has also received orders for the delivery of timber to the east and west coasts of Great Britain, and this wood will be all shipped from Quebec. Apart from the Dobell, Beckett & Company's contract with the British Admiralty, only one cargo of wood up to the first of May has been sold for shipment to the United Kingdom, and this comprises small orders from the English market spread over several Quebec export firms.

Mr. J. G. Levie, vice-president of W. & J. Sharples Co., Reg., who recently returned from the United Kingdom, where he spent two months, is not very optimistic over the chances for the timber trade in the United Kingdom for the year 1921. In an interview with the Quebec representative of the "Canada Lumberman," he made it plain that trade conditions were absolutely at a standstill and the situation, to say the least, tragic. He said he was reluctant to discuss the situation, nevertheless the truth should be known without quibble or reserve, and it was in his opinion that the Canadian lumber trade could not look for business this season from overseas unless the unexpected should happen towards the close of the St. Lawrence navigation, which he for one did not anticipate. There was only one thing to do for the present, which was to sit tight and wait patiently for a reaction. It was not only the lumber trade that was in a bad state, said Mr. Levie, but all branches of trade and manufacturing industry in England, due to the unsettled political aspect of the whole of Europe, and revolutionary attitude of labor, and it was problematical when a change for the better would set in.

Lt.-Col. R. M. Beckett, of the firm of Dobell & Beckett, who also recently returned from England, confirms the statement made by Mr. Levie and says conditions could not be worse. Like Mr. Levie, he says the outlook for Canadian trade as far as the United Kingodm is concerned, is absolutely discouraging for the year 1921. He referred to the large stock of timber and deals that had been bought in Canada during the war by the British Ministry, and since sold to an association of British export lumber firms, saying that this stock would not be absorbed for another year at least. Until this wood was exhausted by consumption, Canada could not look for many orders except for special lines of wood to fill European orders. In the meantime the Quebec lumbermen are not worrying. They are in a strong, solvent position and can patiently wait for the turn of trade conditions, but they have decided to cut down operations in the woods and at the mills until the dark clouds roll by. There is, however, a feature in regard to the income tax that is causing the big firms to do a lot of thinking. They were prosperous for some few years past, and now are called upon to pay into the Government a large portion of their profits, and handing over to the Government a very large sum of money that naturally comes out of business which later on may be seriously felt.

More Opinions on Building Outlook

The Bryan Manufacturing Co. of Collingwood, Ont., say: The outlook for building in the town this year is not very good, as the shipyard, which is our main industry, is practically closed down at present. Consequently there are a lot of empty houses. The principal demand is for repair work, verandahs, etc. The farm trade on which we depend to a large extent has also been pretty quiet up to date this spring, although we anticipate this will improve later on. The business in the small villages around from which we draw considerable of our business, has been fully up to the average of the last few years. The chief demand at present is for material for summer cottages for Wasaga Beach, a summer resort about twelve miles from here which is getting to be popular. There are an increasing number of buildings going up there each year. Taking it all around, our business up to now has been fully up to the average of the last three or four years.

Nantel & Remillard of Montreal:—Retail trade is good and we are very busy just now, but we find that building operations are not what we should expect. We have about the same amount of stock as last year at this period and are not buying in large quantities as prices are coming down and we expect them to go lower. We have increased our sales 50 per cent. over last year. Our yard and buildings are large enough for the present. We do not manufacture but have our lumber dressed near our place.

Pellow & McMeekin, Hearst, Ont., whose sawmill is at Hazel Siding, say they have three-quarters of their last year's cut still on hand and will not be cutting as much this season as they did last. The firm report that locally the demand for lumber has just opened up and prospects seem fair but at a lower figure than has previously prevailed. They are of the opinion that the requisitions for dressed products will be more numerous than for rough lumber.

Opeongo Lumber Co., of Pembroke, report that in their section of the country business is just fair. There are a few new buildings going up along with the new Roman Catholic Church, and a new match factory, which has already started making matches for export. The pulpwood business was brisk for a time but has now quieted down. Mr. F. E. Armstrong states that he is now a member of the Opeongo Lumber Co., wholesale dealers in lumber, ties and cedar poles. They took out about the same cut during the past winter as the year before, with a larger percentage of ties. The 1920 stock is mostly on hand but the 1921 cut of ties and lumber has been sold. It is stated that the box business is rather quiet in Pembroke but is likely to pick up in the near future.

The Lumberjack in the Celestial City

During the past season lumber-jacks were more contented in disposition and inclined to hang on to their jobs rather than meander from camp to camp.

The nomadic life of a bushman is proverbial. It has been the cause of expense and loss of time and output to lumber companies, and also the subject of jests on the part of those who can see humor in any situation, no matter how grievous.

One of the best stories on the restlessness of the lumberjack was told by E. C. Barre, general manager of the Cleveland-Sarnia Sawmills Co., at the annual meeting of the South-Western Ontario Retail Lumber Dealers, held recently in Sarnia.

According to Mr. Barre, a certain lumber-jack died and ascending to Heaven, was met at the gates of the pearly city by a guardian angel, who enquired the name and business of the sojourner.

"I am a lumber-jack," came the response from the caller.

"Well, you can't get in here," emphatically declared the guardian angel. "No lumber-jack is admitted to this celestial abode."

This flat refusal led to a rather warm argument, and during the controversy St. Peter came up hurriedly, and enquired what all the row was about.

The guardian angel told the "Keeper of the Keys" that here was a lumber-jack who wanted to gain entrance into the Kingdom. "And you know," he added, "no lumber-jacks are ever admitted here."

"Oh! that's all right," blandly smiled St. Peter. "Let the fellow in. He'll only stay a day or two anyhow."

Ontario Association Appoints Committee

Standing committees of the Ontario Retail Lumber Dealers' Association have been appointed for the year and are as follows:

Trade Relations and Arbitration: J. B. Reid, chairman; W. C. Irvin and T. H. Hancock, Toronto

Legislation and Transportation: B. F. Clarke, Glencoe, chairman; A. M. Davis, Ottawa; Frank Kent, Toronto; H. Sheppard, Toronto; G. S. Zimmerman, Tavistock; J. B. McKenzie, Georgetown; P. G. Piggott, Chatham; O. W. Rice, Welland; F. B. Van Dusen, Brockville; Howard Hesson, Sault Ste Marie.

Insurance and Workmen's Compensation: W. C. Laidlaw, Toronto, chairman; Alex. Rhind, Toronto; D. C. Baird, St. Marys; W. G. Gorvett, Arthur; W. J. Green, St. Thomas; A. Bailey, Hagersville; H. Crosthwaite, Hamilton; G. P. Davidson, Ottawa; D. H. Andress, Sudbury; H. A. L. Swan, Ottawa.

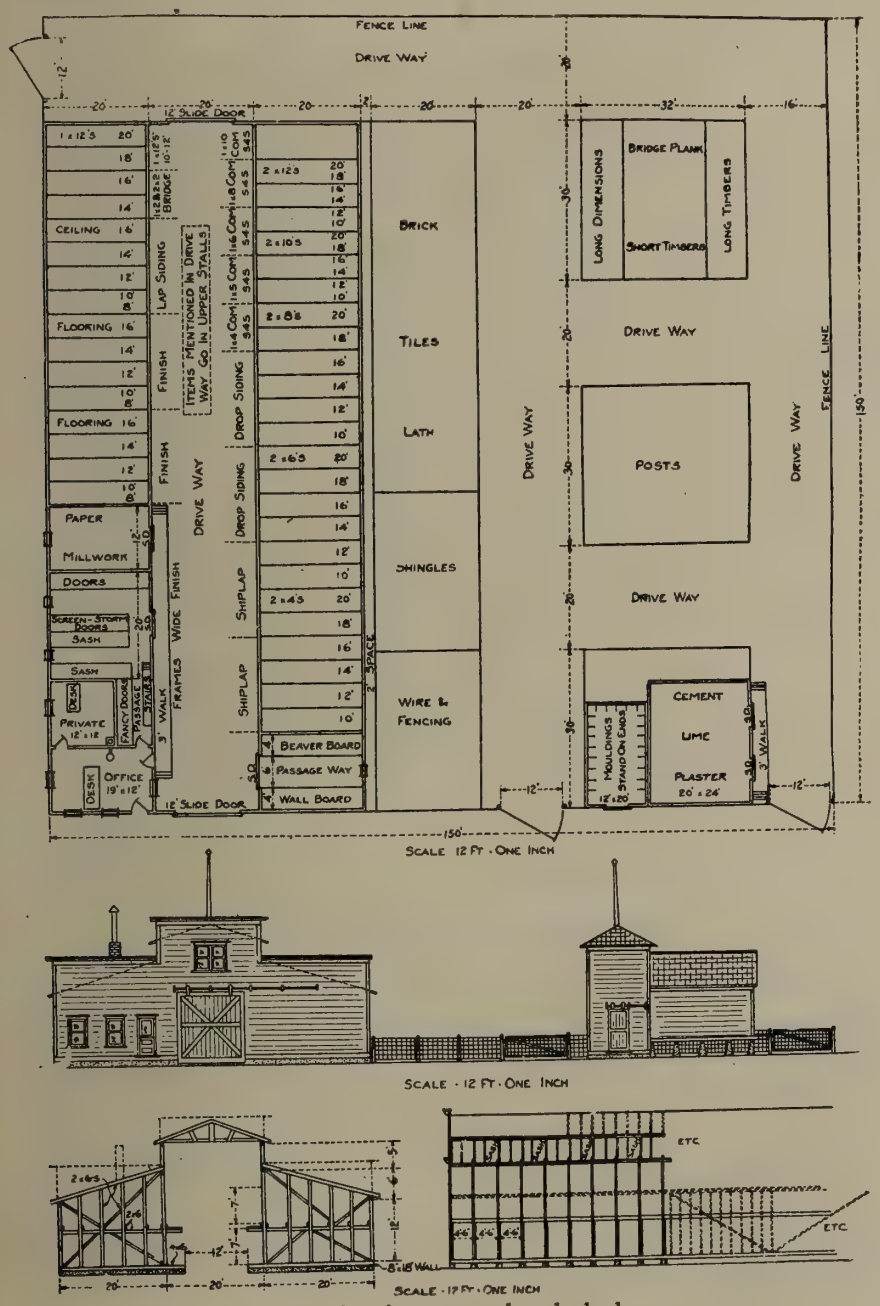
Operators Will Have to Take Loss

Writing to the "Canada Lumberman" from Midland, Ont., a lumberman says. "During the last week in April we had several days of heavy rains. This will assist the operators to get out their logs, but in one of two cases it carried away some of the dams and there were several logs scattered around Georgian Bay, quite a number of which may be lost. Several of the larger mills began operating the last week in April and seem to have no trouble getting labor, which is plentiful, although wages have dropped in some few cases as much as 30 per cent. This decrease in the sawing expenses will very little more than counterbalance the increased cost of logging. On the present market prices it looks to me as if operators are up against a loss this year. Have not heard of any stocks being sold as yet. Several are offered but are being held at prices only $5.00 or $6.00 below 1920 quotations. I do not think the value placed by the manufacturers can be realized by them in the face of present competition."

Fine Layout for Retail Lumber Shed and Yard

Practical and Economical Plans that are Suitable for Small or Large Business—Convenience and Service the Watchwords—Buildings are Not Expensive

Perhaps nothing will do more to prove to the public the fact that now is a good time to build than for retail lumbermen themselves to go ahead with necessary improvements and construction, and the remodelling of plants which badly need it. This evidently was in the mind of a live retailer when he said, "If the necessary construction of lumber offices and sheds should be undertaken this spring throughout the country, it would help to inspire confidence in the public toward needed building operations and also serve as an injection of optimism in the lumbermen themselves and help to improve the business conditions of the lumber industry all around and elevate the lumber retailer in the esteem of the general public."



Plan showing an enclosed shed.

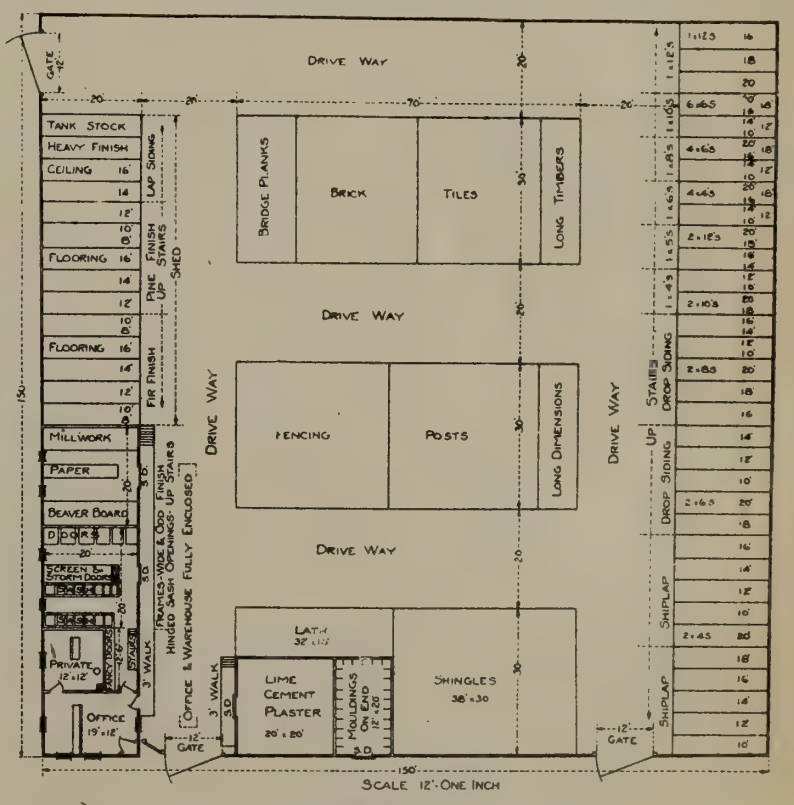
John A. Smith of the Potlatch Lumber Co., Genesee, Idaho, recently wrote the "American Lumberman" giving his ideas of a well arranged and properly laid out lumber shed and yard. His plans are practical, and laid out with an eye to economy and are suitable for either small or large yards, in that if a large company wants to follow the layout the plans can very easily be enlarged. Regarding these designs, Mr. Smith said:

"Having established a number of yards in different parts of the Northwest and managing them for several different companies in the last eighteen years, and observing a good many yards throughout the country, I believe that I have arrived at a system of yard and shed arrangement that includes convenience and economy of space and design of offices and sheds that are sightly and not expensive. Perhaps the most common of unsightly things in modern business is the lumber office built in conjunction with the open sheds and the open sheds also that we see when travelling on trains. These poor buildings must cause a very depressing effect upon the inhabitants. A good design of office and sheds is the best advertisement that 'Building Booster Specialist' can have, and 'practice what you preach' in building is like anything else, it invites and encourages imitation and proves also a good asset to self esteem and confidence. It is not very consistent for a lumberman or building expert to appeal to civic or personal pride and still retain the lumber office and sheds one usually sees.

"An office built on the front of an open shed can be greatly improved upon as to appearance by putting on three gables, and a corner door entrance, on the corner near the yard, direct to the lobby and passageway to the door of the sash and door display room, and also the side door leading direct to the yard. This lobby and door and desk arrangement is very convenient and is shown in 'Plan A'; the office can be made several feet wider, if desired, than that shown in the plan. A private office is necessary.

"The sheds also should be built with some regard to the appearance of the outlines. An open shed should have a hood projection of 10 feet to allow for loads to be driven under out of the rain. This style of a hood is a great protection to material in the sheds, also for material unloaded on the ground, as is often necessary for the piling of the lumber into the sheds. In fact, an open shed of this design is just as desirable as a closed shed in many sections of the country and is a whole lot more convenient and accessible.

"The moulding houses as illustrated are great time and patience savers in getting the desired lengths and in bundling up quantities



Plan with office in front of shed.

of molding, to say nothing of the time saved in marking the lengths of molding before putting them into the old style pigeon holes, as is so frequently done. The stand-on-end system permits a ready display and inspection and is also a protection of moulding against dust collection. I would never think of putting molding overhead in a double shed, or any other kind of a shed unless I wanted to make myself as much inconvenience and work as I possibly could, as molding demands considerable attention in the average yard.

"The cement house should be built up so that the floor is about three feet from the ground, which facilitates loading and unloading and also serves to keep the cement dry. The cement house should never be built in a double shed, as dust and dirt from the cement is easily carried into the office, and it is not so easy to get the cement house up to its proper height as shown on plans.

"You will notice that the driveway around the yard facilitates driving as well as economizing space. The sheds and warehouse arrangements are well thought out for the purpose of having stock in proper order and convenient for handling."

The two plans designed by Mr. Smith have essentially the same storage capacity and it is merely a matter of choice as to which design will be selected so far as that particular feature is concerned. Some retailers will much prefer Plan "A," which has an enclosed shed with the standard dimensions and lumber stored in the shed. The office in this plan might be made more attractive by the substitution of one large plate glass window for the two windows shown in the front. The idea of a separate moulding house is good and one well worth careful consideration by retailers.

Emphasis is to be placed upon the fence design in the plans prepared by Mr. Smith. Such a fence could be of wood pickets, or, of course, could be of wire. One large line-yard operator at present is considering the standardization of fence design, using the diamond shape mesh unclimable wire fence with an angle iron running along the top capped with a row of spikes.

One thing well worth remembering in the erection of any shed is the advisability of painting white inside as soon as it is completed. The bright walls will greatly facilitate working in the shed in dark weather and will make it much easier to see the stock in the bins. This painting can be done with a cold water paint, with regular interior white paint. Probably the best paint to use of all is a fire resistant white paint which will greatly lessen the danger of the spread of fire or the starting of a fire.

Definiteness Needed in Forest Contracts

The more general appreciation of governmental forestry branches of the advantage of administering our timber lands along lines of scientific forestry practice should be an incentive to foresters to promote the adoption of more specific terms than heretofore customary in descriptions of trees or timber, says A. V. Gilbert. In the past, no little confusion has resulted in different interpretations being placed upon the nomenclature adopted in forest legislation; it would, therefore, be of advantage that a standard terminology bo followed.

A matter under discussion at present is, as to whether licenses issued but a few years ago, in which a condition appeared reserving "pine," included jack pine or only white and red pine. More recent forest legislation included a classification of "spruce and other soft woods." "Soft woods" is, of course, a very indefinite term, and may mean anything. With the high prices of all kinds of timber, this broad classification has become a very live problem, one in which both the public and the timber trade are intensely interested.

The "pine" controversy has demonstrated that while a certain designation may seem sufficiently specific to define what is presently intended, with changing conditions the use later of a certain timber species for some industrial purpose may render the term ambiguous. For instance, with the increasing use of jack pine for pulpwood purposes, a pulpwood concession which contained a restriction reserving "pine" would very largely reduce the amount of pulpwood available, if the interpretation of "pine" were to include jack pine.

To overcome what may at any time become an acute situation, more definite names should be applied to timber species. Undoubtedly, the most satisfactory terminology to be used in legislation would be the recognized botanical names, since common names are too often varied by local conditions.

The Dominion Forestry Branch has published a pamphlet, "Native Trees of Canada"; the nomenclature adopted therein might with advantage be followed as a standard throughout Canada.

Purchase Ties Where Price is Favorable

That certain individuals were given to attempting to use political influence to secure contracts for railway ties and that it was the business of the committee to frown on such practices was stated before the special parliamentary committee on Government-owned railways and shipping recently at Ottawa by Hon. T. A. Crerar, Progressive Party leader. While Mr. Crerar had every sympathy with the farmers "getting out" ties, the railways must be run on well-accepted business principles. Railway officials would not be fulfilling their duties if they permitted themselves to be influenced.

R. C. Vaughan, vice-president and director of purchasing and supplies for the National Railways, said the ties were purchased where the price was favorable to the railway. Other supplies were purchased on a similar basis.

Urges Westerners to Build Right Now

In impressing upon the members of the B. C. Manufacturers' Association, at Vancouver, the wisdom of giving support to the "Build Now" campaign launched recently by members of the building trades, Lt.-Col. Ryan, at the meeting of that body, expressed the belief that costs had reached bottom and could be regarded as being stabilized for some time to come. He emphasized the big drop in lumber prices, but said any advantage to be obtained along that line should be realized now, and urged the use of local products before other materials. A revival of building operations on a large scale would do more to restore confidence and improve business than anything else.

Using Bamboo for Making Paper

The current number of The Bulletin of the Imperial Institute contains a comprehensive and valuable article on the utilization of bamboo for paper-making. Bamboo has come much to the front in this connection during the last year or two, and it seems likely that in the near future the manufacture of paper from this material will be undertaken on a large scale in several countries. A British firm have been granted a concession for cutting bamboo in the government forests in Trinidad and has also established a bamboo plantation there of 1,000 acres. Leases have been granted or applied for for working bamboo forests in Burma, Madras and other parts of India. In Indo-China two factories equipped on up-to-date lines are actually manufacturing paper chiefly from bamboo. Paper made entirely from bamboo pulp is of high-class quality. On the whole it is too good for the manufacture of ordinary newsprint and is more suitable for the better grades of printing paper. The article gives an account of the general characters and distribution of bamboos and a detailed statement as to their occurrence and utilization in various countries. The technical side of the subject is fully dealt with, particulars being given of the various methods which have been employed for the conversion of bamboo into paper pulp.

Great Alaska Pulp Wealth Available

There is sufficient pulp wood in Alaska to furnish perpetually one-third of the print paper consumption in the United States, Colonel Greely chief forester for the United States, who recently made a survey announced.

This could be laid down on the Atlantic seaboard on a basis of between 3½c and 4c per lb., based on present rail freight rates, and lower by water, he added.

For the Manufacturers of Saws

According to a statement given out by Consul Dooman, the lumbering industry in Taiwan, Japan is very promising. The forests which have an estimated area of 7,177,417 acres, contain a number of valuable varieties of trees. Canadian saw manufacturers who are anxious to obtain some of the Japan trade would find this item worthy of further consideration, as there are at the present time 23 lumbering companies in Taiwan, in addition to the sawmills operated by the Governor-General. These concerns buy their supplies through wholesalers and importers in Japan, who have the agencies for American and British manufacturers. About 70 per cent. of the saws used are of British and Canadian manufacture and the remainder are of American manufacture.

Readable Paragraphs in Short Shape

The Marshay Lumber Co. started operations last week at their mills at Milnet and Laforest, Ont., on the Canadian National Railways.

The Conger Lumber Company's mill at Parry Sound, Ont., started up last month, which is the earliest opening in years. The Conger Lumber Co. expect to cut about 5,000,000 feet of hemlock this season.

The freighter Bessie Dollar left Vancouver lately with 12,000,000 shingles for New York, the largest shipment to leave this port for many a day. She also carried copper ore, canned salmon, lumber and other British Columbia products.

H. Boultbee, of Toronto, secretary of the Ontario Retail Lumber Dealers' Association, is arranging for the annual midsummer educational trip of that body, which will take place early in August. It is expected that the sawmills at Spanish, Cutler, Spragge, Blind River and Byng Inlet, Ont., will be visited.

Many Bids Received for Lumber Supplies

At a recent meeting of the Council of St. John, N.B., tenders were submitted by lumber dealers for the supply of material, before the Harbor Department. A reduction of 50 per cent. in the price of spruce deals was noted. There was a large number of tenders. The call was for 153,000 feet of three-inch spruce deals, 20,000 feet of 8 by 8 spruce, 80,000 feet of 12 by 12 hemlock, 40 pieces of 12 by 12 Douglas fir, 122 pieces of 8 by 8 D. F. and 45,000 feet of 12 by 12 D. F., 250 pieces of spruce piling in lengths of 20, 25 and 35 feet, with not less than 25 per cent. 7 inches at the top, and birch timber. The bids were:

J. A. Gregory—Spruce, $28 a thousand and $34 a thousand; Douglas fir, $59 and $60 a thousand; spruce piling, 8, 10, 15 and 18 cents a foot respectively for the several lengths.

Thomas Bell—B. C. fir, $56 per M; spruce piling, 19 cents a foot.

J. M. Driscoll—Spruce, $32.50 per M; hemlock, $35 per M; Douglas fir, $58.75 and $57.75; spruce piling, 15 cents a foot.

J. A. Likely—Douglas fir, $55.75 per M.

C. T. Dean—Douglas fir, $71.50 and $68.50; spruce piling, 17 cents a foot.

J. Roderick & Sons—Spruce, $28.10 per M and $40 per M; hemlock, $37 per M; Douglas fir, $57.50 per M; spruce piling, 16 cents a foot.

J. S. Gregory—Spruce piling, 7½ cents a foot.

J. E. Moore & Co., Ltd.—Spruce, $31 per M, and $45 per M; hemlock, $35 per M.

Union Lbr. Co. (J. S. Eagles)—Douglas fir, $56.50 per M.

Canusa Export Co., Montreal—Douglas fir, $45 per M; fir piling, 23 cents a foot.

G. F. Stevens—Spruce piling, 16 cents a foot.

John McGuire, Golden Grove—Spruce piling, 11 cents a foot.

Randolph & Baker, Ltd.—Spruce deals, $33.75 per M.

Haley Bros., Ltd.—Spruce, $38.50 and $39.60 per M; birch, $75 per M; Douglas fir, $67.50 and $66 per M; spruce piling, 15 cents a foot.

G. M. Hayes—Spruce piling, 16 cents a foot.

Geo. McKean & Co., Ltd.—Spruce, $32.50 and $48 per M.

K. S. Lingley—Spruce piling, 18 cents a foot.

G. M. Johnson, Golden Grove—Spruce piling, 11 cents a foot.

John Douglas—Spruce piling, 18 cents a foot.

The tenders were referred to the Commissioner of Harbors and the city engineer for a report.

The Mayor and Commissioners remarked that lumber had dropped considerably in the last year and the Commissioner of Public Works recalled that a year ago he had paid $56 a thousand for spruce.

Quebec Looks For More Construction Work

Reports from all over the Province of Quebec indicate that a considerable amount of construction work is proceeding, and that the prospects for the season are good. This can be stated, despite the pessimistic views of some who are connected with the building industry, whose opinions have been influenced by the slow way in which construction commenced.

In the case of the pulp and paper mills, very little work is expected, because of the reaction in that industry, and also because there is at present no room for any material enlargement in the way of additional buildings. To offset this, we may expect a substantial expansion in house building; in fact in such industrial centres as Three Rivers, Drummondville, and Sherbrooke large numbers of dwellings are now going up, while in Montreal a feature of the permits is the many houses to be erected.

A considerable number of important buildings are also projected in various parts of the province, including factories, theatres, apartment houses, hospital, convents, monastries, and office structures. All these may not materialize, but the fact that plans have been prepared and tenders asked is an indication of a greater inclination to build.

Prices of building materials have now probably reached bottom, and as wages are on a lower scale—say ten per cent. cheaper—there is more incentive for people to invest in buildings. There are those, however, who declare that costs will have to be more substantially reduced before the public can expect a boom, and that immediately there are signs of a real revival of labor trouble may be expected.

The lumber industry is, of course, interested in this phase of commercial activity, as the building trade forms an important factor in the demand for lumber. According to one Montreal manufacturer and wholesaler, more lumber is going into consumption than at this period in 1920—but as to prices, well that is another story, and one that is not appreciated by the trade. The most serious obstacle to an immediate advance in values is the slackness in many industries where, in the ordinary way, large quantities of lumber are consumed. Several important plants are practically shut down and, until these and others resume work on an active scale, there does not appear to be any great hope of such a demand as will warrant a rise in prices.

The Weight and Length of Cars

The question of freight rates and inaccuracies in classification and charges and other matters came up for consideration at the annual meeting of the South-Western Retail Lumber Dealers' Association, held recently in Sarnia, Ont. Mr. McIntosh and Mr. L. H. Richards of the R. Laidlaw Lumber Co., who have devoted considerable attention to cars, weight, etc., presented an interesting statement regarding the carrying capacity of the same, which is appended in full. It would be well for the reader, who has any doubt on the matter or who has frequent disputes with the transportation lines, to cut out the summary and have it for ready reference.

Here is an interpretation of the different weights and lengths of cars:—

Clapboards, Flooring, Shingles, Lath, Dressed Lumber.	For cars under 35 ft. in length, inside or platform measurement	34,000 lbs.
	Except when cars loaded to full capacity will not contain this minimum, actual weight, but less than	30,000 "
	For cars 35 ft. and not over 36 ft. 6 in. inside measurement for box, stock and gondola or 36 ft. 10 in. platform measurement for flat cars	40,000 "
	Except when cars loaded to full capacity will not contain this minimum, actual weight, but not less than	35,000 "
	For open cars under 35 ft. in length, inside or platform measurement	40,000 "
	Except when cars loaded to full capacity will not contain this minimum, actual weight, but not less than	35,000 "
Lumber (except Dressed Lumber), and other Forest Products.	For gondola cars 35 ft. and not over 36 ft. 6 in. inside measurement, or flat cars 35 ft. and not over 36 ft. 10 in. platform measurement	45,000 "
	Except when cars loaded to full capacity will not contain this minimum, actual weight, but not less than	40,000 "
	For box or stock cars under 35 ft. in length, inside measurement	35,000 "
	Except that when cars loaded to full capacity will not contain 35,000 lbs., the minimum will be the actual weight, but not less than	30,000 "
	For box and stock cars 35 ft. and not over 36 ft. 6 in. in length inside measurement	40,000 "
	Except that when cars loaded to full capacity will not contain 40,000 lbs., the minimum will be the actual weight, but not less than	35,000 "
	The term "full capacity" to permit a space of 12 in. between the top of the load and car lines or rafters of the car.	
	When box, stock or gondola cars of greater length than 36 ft. 6 in. are used, the minimum weight for a car of that length will be increased 5 per cent. per foot or part thereof. When flat cars of greater length than 36 ft. 10 in. are used, the weight for a car of that length will be increased 5 per cent. up to 37 ft. 6 in. and an additional 5 per cent. for each foot or part thereof over 37 ft. 6 in.	

As explained by Mr. McIntosh, if full weighing particulars are not on the expense bill, the consignee is not bound to pay the freight. The bill must show the gross, tare and net weights. It is for the consignee to see that charges are made on the right basis, "and," added Mr. McIntosh, "if you call for a 35-foot car, do not let them charge you for a 40-foot car. If your shipment comes in the minimum class and you are charged more, see that the railways rectify the bills if they are not right. Too much attention cannot be given to shipping details and charges now, in view of the high rates which prevail."

Interesting Case Over Lumber Company

Holding that a provincially-incorporated company can be wound up only unwillingly under the Dominion Act, where insolvency is shown, Mr. Justice Orde has dismissed the motion of shareholders of the North American Lumber Company for a winding-up order. The petitioners, who hold $6,400 of the capital stock, claimed that the stock had been depleted more than 25 per cent. Their petition sets out that the company was incorporated in January, 1920, with a nominal capital stock of $100,000 and that $60,000 of the stock was paid over for a timber license in Proudfoot township, and that $7,700 was paid up in cash.

They further state that it was later found that another person had a claim on the timber license, and that settlement of this difficulty reduced the capital stock to $22,700 and lowered the assets from $89,275 to $29,275.

Average mahogany wood from Cuba has a specific gravity of about 0.72 and a weight per cubic foot of about 45 pounds, 533 board feet weighing a ton. Florida mahogany is heavier, weighing 52½ pounds per cubic foot.

Personal Paragraphs of Interest

S. G. Stone, lumberman of Sault Ste. Marie, Ont., was in Toronto recently on business.

J. McN. Austin, of Austin & Nicholson, Chapleau, Ont., spent a few days in Toronto recently on business.

Fred. Huntington of the Canada Lumber Co., Liverpool, Eng., is spending a few weeks in Toronto and other centres on business.

George McPherson, sales manager of the Keewatin Lumber Co., Keewatin, Ont., is spending a few days in Toronto and other eastern cities.

John James Haslam, a well-known lumberman of New Brunswick, died recently at Sussex at the age of 67 years. His wife died three weeks ago.

W. Turner, who is in charge of the hardwood flooring department of the W. M. Ritter Lumber Co., Columbus, Ohio, transacted business in Toronto during the past few days.

W. H. Cushing, ex-M.P., of Cushing Bros., lumber dealers and woodworkers, Calgary, spent a few days in Toronto recently on business and called upon a number of members of the trade.

W. S. Loggie, M.P., head of the W. S. Loggie Co., general merchants and lumber manufacturers, Chatham, N.B., who has been seriously ill at his home, is, according to late reports, improving.

F. E. Lehr has been placed in charge as manager of the Crown Lumber Co. at Innisfail, Alta. Mr. Lehr is an experienced lumberman and has spent his life in the building and lumbering business.

T. N. Phillips, of Timms, Phillips & Co., Vancouver and Toronto, who has been looking after the interests of the firm in the east for several months past, has taken a house at 57 Chicora Ave., Toronto.

John B. Reid of Toronto, honorary president of the Ontario Retail Lumber Dealers' Association, and Mrs. Reid, who have been spending the past two months at Atlantic City, have returned home.

H. R. Patriarche, who has been with the lumber industry in Western Canada for some time, is now connected with the H. S. Galbraith Co., Limited, of Winnipeg, representing them throughout the Manitoba territory.

J. P. Johnson, of Toronto, was in Rochester, N.Y., during the past week attending the funeral of his mother, Mrs. J. S. Johnson, who passed away recently at an advanced age. She leaves a family of four sons and one daughter.

Joseph A. Olscamp passed away lately in Campbellton, N.B., after a short illness following an operation for appendicitis. He was a son of Joseph E. Olscamp of Ste Anne de Restigouche. At the time of his death he was employed in the office of the Chaleurs Bay Mills.

Francis T. Mercer, eldest brother of the late Major-Gen. Mercer, died recently at his home in Toronto. He was about 70 years of age and spent his boyhood days in Tillsonburg. Until about 10 years ago he was engaged in the lumber business and was manager of several mills in British Columbia.

R. F. McDonagh, late of Hart & McDonagh, is now located in his new offices, 203-204 Confederation Life Bldg., Toronto, and is doing a wholesale lumber business under the name of the McDonagh Lumber Co. Mr. McDonagh has had many years' experience and insight into the industry.

George R. Naden, Deputy Minister of Lands, Victoria, B.C., returned recently from a business trip to Ottawa, Toronto, and other cities. While in the east he called upon L. L. Brown, Toronto, B. C. Lumber Commissioner, and expressed himself as well pleased with the work which is being done in the east.

O. W. Edgcomb, Vancouver, representing the Vanderhoof Lumber Co., Ltd., is at present on a business trip to Eastern Canada. The Vanderhoof Lumber Company contemplates opening an eastern office in the near future. The company's mill is at Vanderhoof, on the G.T.P. in the northern interior of B.C.

Chas. E. Oak of Bangor, Me., died recently in that city. He was formerly a prominent figure in the lumber business of New Brunswick, being at one time the manager of the Miramichi Lumber Company's plant at Chatham. He afterwards became manager of the New Brunswick Railway Company's lands.

Alfred E. Read, of Read Bros., accompanied by Mrs. Read and family, and Mr. and Mrs. Chas. P. Read, Toronto, have returned after enjoying a delightful holiday at Daytona Beach, Florida. Mr. Read states that the lumber business is good in that state and that a great deal is going on in the way of building operations.

Ernest Cay, who for the past three years has been with Mickle, Dyment & Son, Toronto, and has had considerable experience and insight into the lumber industry, has joined the sales force of Campbell, Welsh & Paynes, Toronto. Mr. Cay entered upon his new duties last month and is now covering Western Ontario in the interest of the firm.

T. M. Lewis, who was formerly associated with the Fesserton Timber Co., Toronto, as western representative, has rejoined the company who have offices in the Winch Building, Vancouver. He succeeds George W. Abraham until recently Coast representative for the Fesserton Timber Co. The latter is now covering the Niagara Peninsula for the firm.

Terry & Gordon, Limited, wholesale lumber dealers, have recently opened an eastern office at 308 Coristine Building, Montreal, Quebec. J. E. Green, who has been associated with the firm in Toronto for a number of years, will be in charge. Mr. Green is well known and carries with him to Montreal the best wishes of a host of friends for his success.

L. L. Brown, B. C. Lumber Commissioner, Toronto, will early next month start out on a two-months' automobile tour of Western Ontario, visiting every important town and city and calling upon all the wood-working firms, doing propaganda work in the interest of B. C. forest products. After completing the tour of Western Ontario, Mr. Brown intends to pay a similar visit to the Maritime Provinces.

James C. Fraser, who was a well-known lumberman and was woods superintendent for the Spanish River Pulp and Paper Co. up to the time of his death, passed away recently at his home in Sturgeon Falls, Ont. He was at his office the day previous and did not feel any indisposition. Mr. Fraser formerly lived in Massey, Ont., where interment took place. He leaves, besides his wife, two sons and two daughters.

R. B. Reid of Toronto has been appointed accountant for Hall Bros., Limited, wholesale lumbermen, Toronto. The firm have started operating their mill at Marlbank, Ont., and have carried out considerable improvements to the plant. They have installed a Robert Bell boiler and centre crank high-speed Bell engine as well as new Long trimmers. Their cut this year will be slightly larger than last.

R. B. Elgie, of Elgie & Jarvis, wholesale lumber dealers, Toronto, and Mrs. Elgie, who have been spending the past three months in Western Canada, have returned home. Mr. Elgie is much improved in health and visited Winnipeg, Calgary, New Westminster, Vancouver, and other points, staying several weeks at Banff. He reports that the lumber business in the west is quiet, but it is expected that conditions will gradually improve from this out.

William Campbell died recently at his home, Chaplin Island Road, near Newcastle, N.B. He was born at Shippegan, Gloucester County, and went to Newcastle as a young man when he first worked for the Harding Lumber Co. Later he engaged in the lumber business for himself and continued at this as well as taking up farming. Mr. Campbell was 58 years of age and a kindhearted and generous resident. He is survived by his wife, one son and one daughter.

The new wholesale lumber firm of Hart, Hamilton & Jackson, have taken possession of offices 701-702, Bank of Hamilton Bldg., Toronto. The members of the organization are composed of G. P. Hart, H. A. Hamilton and C. C. Jackson, all of whom were until recently associated with Hart & McDonagh. The new firm will do a general wholesale business in both hard and soft woods. Mr. Jackson will have charge of the sales end and Mr. Hamilton will look after the executive duties.

Edward Beck, of the Canadian Pulp and Paper Association, has left Montreal for a visit to England and Scandinavia with a view of studying forestry and pulp and paper conditions there. Canada has recently been visited by several representatives of Norwegian and Swedish pulp and paper concerns, and Mr. Beck's trip is in response to invitations to pay a visit to their countries. He expects to be joined in Stockholm by G. C. Piche, chief forester of the Province of Quebec.

John W. Vanderbeck, M.P.P. for Northumberland, died at his home at Millerton, N.B., a few days ago. Blood poisoning set in with complications, which caused his death after being ill only four days. Mr. Vanderbeck had been engaged in the lumber business and was widely known. He had been a member of the municipal council for 20 years, and at the time of his passing was president of the Northumberland Liberal Association. When a young man he spent some years in the middle west where he was engaged in ranching.

A bill has been introduced in the Senate at Ottawa to incorporate the Commonwealth Bank of Canada, with headquarters in Toronto. The capital stock is placed at $10,000,000. Among the provisional directors of the new Commonwealth Bank of Canada are Charles Grant Anderson, wholesale lumberman of Toronto. Mr. Anderson has for many years been connected with the lumber industry and is widely known both as a dealer in hardwoods and softwoods. He is head of the C. G. Anderson Lumber Co., and the Anderson-Miller Lumber Co., which have their offices in the Excelsior Life Building, Toronto, and also president of the Commonwealth Securities Corporation, Limited, Toronto.

Value of Canadian Woods to World Consumers

Splendid Showing Made at Empire Timber Exhibition—Canada Leads in the Production of Structural Timbers and Joinery—The Various Species

By W. B. Stokes, Forest Products Laboratories, Montreal.

Countries Exhibiting at Empire Timber Exhibition

Canada
British Guiana
British Honduras
British North Borneo
Ceylon
East Africa
Fiji
Gold Coast
India
Tasmania
Trinidad
Western Australia
United Kingdom
Newfoundland
New South Wales
Nigeria
South Africa

That the world's supply of timber is not inexhaustible is slowly becoming generally recognized and the prospect of serious international competition for the timber resources of the world has been apprehended by many far-sighted statesmen. The stringency brought about by the war added another reason for prompt study of the subject and the importance of the Empire as a whole, and even of individual countries in it, being self-supporting in the matter of timber has exercised the minds of the leaders of political thought at a time when many other problems were pressing for solution. The result has been that at the earliest possible moment after the close of hostilities the forestry authorities and experts of the Empire met in London to discuss forestry problems and, at the same time, the governments of the various dominions and colonies of the Empire held an exhibition of the timbers grown within their territories.

The simultaneous event of the first Imperial Forestry Conference and the Empire Timber Exhibition marks the close of a period of apathy and the beginning, it is hoped, of an era of intelligent conservation of the Empire's forest resources. If the growth of timber in the British dominions and not merely the harvesting is to be encouraged, this growth must be to good purpose; trees must be selected for their merits as lumber and not for their qualities as plants. A review of the forest products at present available throughout the Empire should serve, therefore, a double purpose, (1) the selection of useful species for afforestation and, (2) the exploitation of our standing forest crops to the best advantage.

The British Empire Timber Exhibition was held in London, England, in July, 1920, and was organized by the Exhibitions Branch of the Department of Overseas Trade, assisted by a committee composed of representatives of all British dominions, colonies, and dependencies; of the British timber trade; and of scientific and technical institutions concerned with forestry and timber. The exhibit occupied the entire floor-space (30,000 feet) of the Holland Park skating rink in the west end of London. The countries which exhibited were:

It was possible to see at this exhibition the woods of any British country and, in many cases, a number of articles made from these woods. The exhibit of the United Kingdom was interesting as illustrating the possibilities of a number of small industries depending upon local supplies of home-grown timber, and provided many examples of close utilization of the product of the tree which might well be imitated elsewhere. Among the timbers grown in the British Isles were many native to Canada which seem to find a congenial soil in the home of their adoption.

Canadian Exhibit Was Attractive

The Canadian exhibit was provided by the Department of Trade and Commerce and the work of selection and display was entrusted to the Forestry Branch of the Department of the Interior. The writer was responsible for the execution of this work of collection and preparation in Canada and for the installation of the exhibits in London, and was thus enabled to observe the relation of Canadian timbers to those of the rest of the Empire. In two respects Canada stands alone, for no other country in the Empire possesses such immense quantities of standing timber nor does any other of the British dominions offer softwoods suitable for structural and building purposes in any considerable quantity. The Canadian exhibit, therefore, presented a striking contrast to the exhibits of dark-colored hardwoods from other countries, and if its softwoods offered less of interest to the cabinetmaker they nevertheless monopolized the attention of the builder and engineer. All the commercial timbers of Canada were shown as boards, usually four boards of each species, two boards being clear and two being of a merchantable grade. One board of each grade was rough and one was smooth. These boards were displayed on stands supported by columns and cornices of Douglas fir and other woods. Hand-specimens of sixty-nine Canadian woods were also exhibited. Veneers and panels illustrated the decorative value of several woods, and a raised platform showed 360 square feet of hardwood flooring in birch, beech, and maple. Specially designed tables and other articles served to illustrate the possibilities of Canadian woods for such purposes. Western woods were well represented by doors, handrails, and newels, while a special feature was provided in two models of houses for which Douglas fir timbers are shipped from British Columbia cut to size and ready for erection. Wood-pulp occupies such an important position among industries employing wood that it was allowed an honorable place in the exhibit and the processes and products of ground-wood, sulphite, and kraft pulps were shown in a centrally placed cabinet of original design.

Canadian Woods for the Empire

The value of Canadian woods to consumers in other parts of the Empire can only be determined by results derived from actual trade. The following remarks concerning the possibilities of Canadian woods are based upon their use in the United Kingdom, but it must not be forgotten that in other parts of the Empire there exists a growing need for those timbers which Canada is so well able to supply. Shipments are made to India and Australia from the Pacific coast and improved communications between South Africa and the Atlantic coast offer possibilities in the development of trade with that region.

Canadian white pine (**Pinus Strobus, L.**), known in Britain as yellow pine, has no rival in the United Kingdom for the finest painted joinery or interior finish, for cores for veneered work or for pattern-making, and the demand for the best grades is unceasing. Inquiries were received from large manufacturers of matches for white pine suitable for this industry. Western white pine (**Pinus monticola,** Dougl.) has been shipped to the United Kingdom as waney logs, and being so similar to the eastern species should find a ready market.

Red pine (**Pinus resinosa,** Aiton.) has a definite position in the British market where it is purchased as squared logs or as the product of the same. It finds a distinctive use also in wide, clear-faced boards. Western yellow pine (**Pinus ponderosa,** Dougl.), called also western soft pine, and even jack pine (**Pinus Banksiana,** Lam.), attract the British user on account of their similarity to Baltic pine and are finding a position on the market.

Tamarack (**Larix laricina,** (Du Roi) Koch) was shown at the exhibition but fresh applications must be found for the special characteristics of this timber before its export can be increased. Western larch (**Larix occidentalis,** Nutt.) has also to find a special use. Its appearance recommends it to the British buyer as a handsome and strong timber for interior or exterior work. This refers to the true larch and not to the white fir often sold under that name in British Columbia.

White spruce (Picea canadensis (Mill B.S.P.) and other eastern spruces have been exported to the United Kingdom in large quantities for a variety of users in construction, box-making, etc.

Englemann spruce (Picea Englemanni, Engelm.) is not known as such in the United Kingdom but might well supplement the eastern kinds by reason of its size and quality. Sitka spruce (Picea sitchensis, Carr.) has been shipped during the war in large quantities for airplane construction, and the great surplus has now been diverted to other uses. It is known in England as silver spruce.

Eastern hemlock (Tsuga canadensis, (L.) Carr.) arouses no enthusiasm among British timber users but it is recognized as useful for rough nailed work. Western hemlock (Tsuga heterophylla, (Raf.) Sarg.) has been shipped to the United Kingdom as railway ties but may find favour for unpainted interior finish.

Douglas fir (Pseudotsuga mucronata, Sudw.) known also as Oregon pine, is taking an important place for structural purposes and interior finish in the United Kingdom. One firm, using large quantities of southern pine for the repair of coal lighters in coaling stations abroad, expressed a willingness to experiment with Douglas fir.. The report on the strength tests made on this species at the Forest Products Laboratories of Canada provides ample justification for the employment of this timber for such a purpose. The excellent

doors and mouldings made from Douglas fir in British Columbia attracted much favourable comment.

Balsam fir (Abies balsamit, (L.) Miller) is sufficiently plentiful to be exported under its own name but until some special use is found for it this is hardly likely to happen.

Cedar (Thuja occidentalis, L.) was shown at the Exhibition on account of its quantity but it is hardly obtainable as clear lumber and its special qualities made no appeal to the British timber user. Western cedar (Thuja plicata, Don.), however, should find a definite if unimportant place on the British market for such purposes as wainscotting and boat-building.

Aspen (Populas tremuloides, Michx.) is inquired for by match manufacturers in the United Kingdom. It is required in blocks which will allow the turning of a thick veneer.

Paper birch (Betula Alba var. papyrifera, (Marsh.) Spach.) is shipped to the United Kingdom as spoolwood. This consists of small pieces of square section, the inner heartwood being rejected. British-grown wood is also used for making spools but can hardly compete in quantity with the Canadian product.

Yellow birch (Betula lutea, Michx.) is shipped to the United Kingdom as "Quebec" birch in round logs, waney timber, and planks; and from the Maritime provinces as hardwood planks. It is used for the frames of upholstered furniture,, pianos, and domestic appliances.

Beech (Fagus grandifolia, Ehrh.) serves similar purposes to birch in Britain. One inquiry concerning this wood revealed a special use in the construction of automobile bodies for the upper rail or strake.

White elm (Ulmus americana, L.), sometimes known in England as orham, is in demand for school and church furniture and shop fittings. Rock elm (Ulmus racemosa, Thomas) is used in the United Kingdom for "centering" or temporary timbering for brick-lined tunnels and culverts, and for more permanent use in wet situations.

Sugar maple (Acer saccharum, Marsh.) is in demand in roughly turned blocks for shoe-lasts and also in rough blocks for mangle rollers and other turned articles. The more general use of hardwood floors in the United Kingdom proceeds slowly, but for large halls, skating rinks, etc., maple flooring is already appreciated.

Basswood (Tilia americana, L.) finds many uses in the British furniture trade and for automobile bodies and foundry patterns.

White ash (Fraxinus americana, L.) is used in Britain for cheap furniture, school desks, and tool handles.

Empire Woods for Canadian Manufacturers

The British dominions offer such a variety of woods that the selection of a few for the attention of Canadian manufacturers seems an invidious task. Canada leads so easily in the production of timbers for structural and joinery purposes that she may cast an indulgent eye upon the resources of New Zealand and Western Australia. The various eucalypts of the latter country known as York gum, karri, and jarrah were shown in many different forms as timbers, railway ties, interior finish, furniture, car frames, and wagon wheels. New Zealand is better provided than Australia with soft-woods, of which Totara and Kauri pine are the best known.

Canadian manufacturers of furniture and musical instruments must look to the tropics for material for their finer productions. The import of tropical woods may be greatly assisted by the improved communications with the tropics effected by Canada's mercantile marine. A practical step would be, therefore, to encourage trial shipments of West Indian and West African timbers.

Of tropical woods displayed at the Empire Timber Exhibition, crabwood, cigar box cedar and locust from British Guiana, Trinidad, and British Honduras may be considered as useful to Canada. The excellent mahogany from the latter colony also is unsurpassed for many purposes, particularly for fine furniture and airplane propellers. Mention must be made of British Guiana greenheart, which is one of the very best timbers for piles and dock sills exposed to marine-boring animals.

Nigeria offers several woods, including African mahogany, which is shipped in large quantities to England, but many of the products of this region and its neighbor, the Gold Coast, are known as yet only by their scientific names. In the East, British North Borneo, Ceylon, and the East Africa Protectorate offer a variety of hardwoods which have yet to be developed commercially, but British India has approached the exploitation of her manifold resources in an admirable manner and did much to make the Empire Timber Exhibition a notable one.

The history of the development of furniture shows that the use of a novel material has often ushered in a new period of design. Thus the introduction of walnut in place of oak marked the radical change in construction which came at the time of William and Mary and Queen Anne. It was the importation of mahogany which made Chippendale's work possible, and the exploiting of satinwood, rose-wood, etc., which gave Sheraton his inspiration.

If history is to repeat itself the introduction of the beautiful woods exhibited by British India will mark the beginning of a new period of furniture design. If Canadian manufacturers aspire to a share in that development they must make themselves familiar with the products that come from India. The names of these woods are mostly strange to western ears, but Andaman padauk, prima vera, rosewood, and teak are well known. It is, however, to the less known Indian black walnut, gurjun, Andaman marble-wood, laurel-wood, Indian salmon-wood, Indian tulip-wood, and Burma lancewood that one must look for inspiration in the construction of fine furniture in which, as the exhibits showed, beauty of line and proportion need suffer no loss by being associated with the greatest wealth of color and figure that ever grew in the heart of a tropical tree.

Lumber Exports From Campbellton District

Mr. G. C. Woodward, American Consul at Campbellton, N.B., made the following report on exports of wood and products to the United States from Campbellton, which consular district comprises the counties of Restigouche and Gloucester, N.B., and Bonaventure and Gaspe, Que.:—

Article.	Qty.	Quantities.	Values.	Quantities.	Values.
Wood and Products:		1919		1920	
Lath	M	134,142	401,842	36,137	320,425
Lumber	M	92,929	1,447,857	48,384	1,940,726
Miscellaneous	—	8,715	5,585	.....	.....
Pulp	Tons	26,560	2,073,769	35,889	4,270,537
Pulpwood	Cds	26,333	366,235	39,972	777,831
Shingles	M	111,404	468,327	49,572	314,647
Ties	Pcs	175,498	74,723	141,183	137,655
Total wood and products			$4,939,338		$7,761,821

Standard Canadian Export Reference

Heaton's Canadian Export Book, Heaton's Agency, Toronto. On both the Atlantic and Pacific Oceans' steamship lines run direct to all ports of the world; exporters and importers can now ship direct to and from the Dominion. With this new development of national effort a standard export book for Canada became a necessity and towards the end of 1919 Heaton's Agency of Toronto, was commissioned by the Canadian Trade Commission of the Dominion Government to prepare such a book, following the style of Heaton's Annual, the commercial handbook of Canada, which is now familiar to every commercial firm in Canada. This book, which has now appeared, does credit to the enterprise and judgment of the Canadian Trade Commission. It contains a full directory of the seaports of Canada, showing loading, wharfing, and transportation facilities, etc., with maps of harbors, valuable notes on shipping and marine insurance, an official directory, exchange tables, etc. But the book is chiefly remarkable for three things,—a directory, containing the names, addresses, cables, codes, etc., of over 2,500 firms who state that they are prepared to fill export orders, with a complete list of products exported; a comprehensive encyclopedia of the manufactured articles and natural products exported by Canada, and a list specially prepared by the Dominion Census Bureau showing in detail the products exported from Canada to very country in the world.

Propped Up In Timber

The Forest has been called the Mother of Civilization.

At whatever point you make a contact with Canadian industry—whether the farm, the mine, the fisheries, manufacture, whether the machinery of production or distribution, whether you build ships, grow peaches, or read a newspaper you establish your dependence upon the Canadian Forest and the materials and services rendered by it.

Every reader of this card is a shareholder in Canada's forest resources and a responsible partner in their protection against fire. Therefore:

This is a good thing to keep in mind next time you are in or near a timbered area:

No forest can resist your unextinguished campfire, your tossed-away match or lighted tobacco.

Put out every form of fire in a forest—Dead out!

Not because it is the Law, but because it is Right.

Turning Poplar and Basswood Into Splints

Converting Raw Material Into Suitable Dimensions For Matches is Interesting Process in Large New Industry Just Been Started by Noted British Firm in Canada

E. A. Dunlop, Pembroke, Ont.
President of the Company.

The latest edition to industries of Pembroke, Ont., is the new match splint factory of Maguire, Paterson & Palmer, who have completed a large and well-equipped building on the town's waterfront. The company are building not only for immediate requirements but are taking a large view of the future demand, and thousands of feet of floor space are reserved for the installation and duplication of splint-producing machinery that will greatly increase the output as soon as business and commercial conditions again become normal.

In August, 1920, it became known that the British interests who owned the large match-manufacturing business of Maguire, Paterson & Palmer, Limited, with headquarters at Liverpool, had decided to extend their operations to Canada. Incorporation was secured in the Dominion with head offices in Montreal and an authorized capital of $5,000,000. A suitable location was then sought and finally Pembroke, Ont., was decided upon, largely through the activity and interest of E. A. Dunlop and other progressive citizens of that live town. The site having been determined, the company lost no time in getting down to business. They secured a new building erected a couple of years ago by the Pembroke Iron Works as a munition factory. This structure had never been used and they also got possession of the properties belonging to the Pembroke Lumber Co., comprising upwards of 800 square miles of timberlands and the extensive industrial operations in Pembroke. The Iron Works building was dismantled and re-erected, forming part of the present structures, which might be termed by the ordinary layman as a "glass factory." The materials used in construction are largely comprised of iron uprights, cement foundation and base with glass taking the place of brick walls.

Building is Well Laid Out

The building is one storey in height, except in the centre which is raised several feet, showing an oblong structure with windows on each side for the purposes of admitting natural light to the interior. Its entire length is 460 feet, width 140 feet and height 40 feet. The floor space is approximately 49,000 square feet and the ventilation, lighting, and "safety first" equipment, are all strictly modern in every detail.

The boiler house is a two-storey solid brick structure, located at the northwest corner of the main building, and is 60 feet in length by 60 feet in width, with a height of 40 feet. In this building is an 150 h.p. boiler and, with an eye to future development, there is also an emplacement for a second one of like capacity. This boiler is used for heating the factory and drying the splints when reduced to match size. The upper storey is used for the storage of fuel and contains also the mechanical apparatus necessary for the conveyance of the fuel to the furnaces on the ground floor.

Power is supplied by a 90 h.p. motor at present, but this machine will ultimately be replaced by one of 140 h.p. as it is felt when capacity production is reached the one now in use will prove many horse-power short of requirements.

Poplar and Basswood Used

The raw material required consists of four-foot poplar and basswood logs, eight inches up in diameter and the annual consumption, it is estimated, will reach fully ten thousand cords, the supply of which will be in the hands of the Pembroke Lumber Co., although all offerings made at the factory will be handled in the ordinary course of business.

The process of converting the raw material into splints of suitable dimensions for matches is interesting. At the extreme western end of the factory the four-foot logs are sawn into 22-inch lengths and, in the winter season, are immersed in a tank of water where they are "stewed" or "boiled" in order to remove the frost and ice. The barking machine is next put in action for the removal of the bark. The pieces of timber revolving on their own axis come in contact with a twenty-three inch blade which gradually removes the bark with a minimum of waste. They are then conveyed to the peeling machine, where again revolving on their own axis in contact with a sharp knife, they are cut into strips of veneer the thickness of a match—each block producing two strips which measure from seven to eight feet in length with a width slightly over ten and a half inches. These veneer strips are then taken to the chopping machines in bundles of seventy and fed into a machine which has a blade which makes horizontal as well as vertical cuts at the same time and at the rate of 170 strokes per minute, each stroke producing about 350 splints.

The next process is that of drying trays and taken to the steam drier where all the moisture is eliminated. They are then conveyed to the polishing machine, a huge drum which revolves at a high rate

The spacious new match splint factory recently built at Pembroke, Ont., by Maguire, Paterson and Palmer.

of speed and materially improves the appearance of the product. Next comes the cleaning machine which removes the dust and any particles of wood still adhering to the splint. The levelling machine is next seen in action. The splints are subjected to a swift jogging which causes them to take up parallel positions in groups at the bottom of a specially designed tray. These trays are then taken to the packers who remove the splints to the packing cases, exercising the greatest care in building these groups from the bottom up, so that on their arrival at the finishing factories in England, they are at once ready for feeding into the continuous process machine which dips, heads and place in packages the finished product ready for the market.

The cases shipped from the Pembroke factory contain approximately half a million splints each and the daily production averages 30,000,000. Some new machines are in course of installation and conveyors will be installed in the near future which will add to lessening cost of production as well as increasing the general efficiency of the plant.

At present there are 110 employees on the pay roll and this number will be increased to 150 when in full operation in the course of a couple of months.

Made Record in Construction

The factory was erected by Fraser, Brace & Co., of Montreal, who made a record for winter construction work in this locality. They commenced dismantling the munition factory and building operations on October 29th last and practically completed their contract by the 10th of February—not quite three months and a half. The mild weather of the past winter undoubtedly assisted in the speedy completion of the work.

The principal factory of Maguire, Paterson & Palmer is located in Liverpool, England, where some 2,000 hands are employed. Before the war this factory received its splint supply from Russia and Sweden. The outbreak of war automatically cut off these sources of supply and the plant in Russia, under the management of Mr. Reed, who is now in charge of the Pembroke plant, had to shut down. The conclusion of the war brought very little relief. It was impossible to look to Russia for supplies owing to the chaotic condition of affairs in that unfortunate land and Canada was eventually selected to fill the breach. Pembroke had an advantage for two outstanding reasons—proximity to abundant supplies of raw material and its ability to furnish a sufficient supply of labor.

The employees are all Canadians with the exception of a few skilled workmen brought from England to coach the beginners, whom, the manager states, prove very apt in picking up the work.

E. A. Dunlop, ex-M.P.P. of Pembroke, is the president of the company; E. B. Reed, plant manager, and Chas H. Hill, office manager. Mr. Hill, previous to coming to Canada, had a distinguished career in the British regular army and won the much-prized distinction.—Commander of the British Order of the Empire in the late war.

How Proctor Saw Tooth Happened

There seems to be a great deal of discussion in regard to the tooth I carry on band saws, of which I am in charge. For the benefit of those interested I will give my experience of the development of this style of tooth, says A. E. Proctor in the "American Filer." I have had an experimental nature all my life and have tried many things in my seventeen years' experience as a filer, many of which I have discarded. A few have been of real benefit to me, of which the tooth I am now using is one. When I first came on the job I now am on, it was a head rig, 10-foot band mill, using 16-inch, 12-gauge, 60 feet long band saws with 3-inch space teeth, travelling 10,600 feet rim travel per minute.

We had some extra hard fir logs and had quite a little trouble with bull heads or goose necks, as some filers prefer to call them, due to high speed. I explained this to the superintendent and got him to slow the mill to 8,500 feet saw travel per minute, which did away with the bull heads, but then my saws dodged the knots at that speed. So I started to let out hook, which helped the dodging and the saws ran better than they ever had before.

Then I began to study sawdust resistance and saw that the no-hook tooth had practically none. I commenced to enlarge my gullet and in about a month had teeth down to about a depth of 1 and 7/16 inches. At this depth they commenced to washboard in the cut so I dropped back to 1⅜ inches, which I now have and have had for the past four years.

The sawyer told me that I sure had the right thing as the saws ran much better than with the hook tooth. After getting the long side fixed up with the no-hook tooth, I turned my attention to the short side head rig which is a 9-foot mill on which I run the old head saws, 12-gauge saws, 3-inch space tooth and are worn from 16 inches to about 12½ or 13 inches when put on the short side. This mill is run by a 250-horepower motor, saw travel of 10,300 per minute. I had the ordinary hook tooth, see cut No. 1, 13 inches of hook in 16-inch saw, 1⅛ inches deep.

My saws were running as good as the average hook-tooth saw, but the electrician came to me on an average of twice a week and told me that my saws were pulling too hard and that the switch kept bothering him by kicking out every time the saw was in a cut above 30 inches. I told him that the motor was not large enough for the work and that was where his trouble was as other mills of a like size had 250-horsepower motors and did not have this trouble. However, I set to work to see what I could do. I was about ten days changing from tooth like cut one to tooth like cut two. The sawyer immediately told me that the saws cut much easier and that he could carry about one-third more feed.

This ran along for about a month when the electrician came to me and asked what I had done to the saws. In turn I asked why he

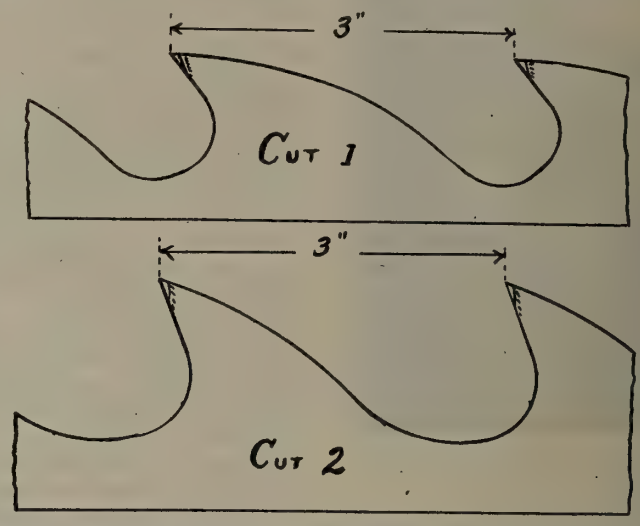


Fig. 1. Hooked tooth. Depth greater than width of gullet.
Fig. 2. Less hook, more room for dust and less saw-dust resistance.

wanted to know. He said he was not bothered any more by the motor kicking out and that the ammeter showed about a hundred horsepower less being used. Then I told what I had done. We never have had the motor kick out since that time and have cut much larger logs than before.

Now I will tell you why cut two tooth pulled easier than cut one tooth. No one can dispute the fact that the hook tooth will cut through the timber easier than the no-hook tooth, but you cannot get the proper dust chamber with the hook tooth, therefore, you have sawdust resistance, which consumes much more power than does the scraping cut of the no-hook tooth. For example note that the distance on line A in cut one is greater than line B. Now note that sawdust is forced backwards due to hook into the pocket or gullet and must make nearly a complete turn to release itself. Therefore, it consumes considerable power to force it down and out. You will note line A in cut two is shorter than line B. There is practically no pocket in cut two back of the point, therefore, no sawdust resistance and as a natural consequence, less power.

Why will tooth two take more feed than tooth one? Because with the less hook you can make a much deeper, larger gullet with no sawdust resistance, which will carry away a much greater quantity of sawdust per tooth than is possible with tooth like cut one. Therefore, less strain on the blade and it is natural that a much greater feed can be carried without putting the saw out of line.

Hrere are a few reasons why all filers should use this style of tooth. First, it has reduced my work by half due to saws running longer each turn. Second, they have reduced my bench work more than half by tension staying in much longer, due to less sawdust resistance making less strain on the blade. Third, increased feed and better manufactured lumber, with the use of less power means less strain on the saws. Less strain means less bench work, less bench work means longer life for saws. Longer life for saws means longer life for the emery wheel, which means longer life for the filer, due to eating less emery dust, so I consider I have a wonder in the Proctor tooth.

The Falls of Shawinigan, Que., have been restored to it by a kind Legislative council. When the bill that was amended by the Legislative Assembly cutting the words falls off from the name of this prosperous town came before the Private Bills Committee of the Upper House quite an argument occurred between Mr. Ricard, M.L.A., for St. Maurice and Mr. Mailhot, as to whether the change should stand, the big corporations in the district contending strongly for the rentention of the name of Shawinigan Falls. Hon. Mr. Bryson raised the question as to whether the change had been covered by the proper notice, and although in the Lower House the chairman had ruled that it was, the Hon. A. Turgeon, speaker of the Upper House ruled that it was not, and so the committee struck out the amendment and Shawinigan Falls will still remain Shawinigan Falls.

Are Jobbers' Camps Not Up to Mark?

Lively Discussion Regarding Convenience and Facilities For Lumberjacks in the East

Considerable discussion takes place from time to time regarding the equipment, accommodation and comfort of lumberjacks in the various camps throughout Ontario and Quebec. Too often are distorted statements made and given an application as if they applied generally to all camps conducted by recognized companies. There are jobbers' camps in many parts of Quebec and probably some complaints received with regard to them are not in any way exaggerated. These camps have not the same sanitary supervision and provincial oversight as those of the regular lumber companies. There is, no doubt, great room for improvement in their equipment and facilities.

Recently eastern papers have been devoting considerable attention to the alleged overcrowding and filthy condition of some of these camps, and the question is asked who is to blame for the state of affairs. One lumber official says the men alone are to blame. A number of bushmen have been kicking against the wages they have received, claiming that contractors did not live up to agreements.

It is not well to pay attention to all the irresponsible and misleading utterances of certain correspondents in the press. A following letter, which appeared in a recent edition of a Montreal paper, would indicate that the man raising the kick and signing himself "Lumberjack," worked for a jobber and not for any recognized lumber company. The letter in part is as follows:—

"Now, for instance, this last winter we hired myself and two boys. The agent came to the house, but this is the first time in twenty years, and promised me, as an experienced hand, $100 a month. To the older boy he promised $90, and to the younger $70. He also told us that it was a first-class camp with iron bedsteads, mattress, and other usual fairy stories, which of course we took with a large amount of salt. We went, and when we got to rail end or headquarters of the company, the agent admitted that he had not the power to give $100 a month to anybody, but still assured me that if I worked well I would get it. We went to camp, as I have a large family and could not well afford the expense of losing time and train fare to change company. Anyhow, there might be worse , I thought. When we arrived at camp this is the sort of camp we found: The camp was about 30 feet wide by 20 to 25 feet long, and not more than 7 feet high from floor to roof. The floor was of logs hewn on one side and just laid on the ground. Some of the poles were 4 inches higher than others and this made it very uneven. The roof was of poles with bark still on and this was covered with earth on top, over which was an open space and then a roof of poles and tar paper or roofing. Inside the camp were beds on each side, of the old muzzle-loader type, 7 beds 2 tiers high, 2 men to a bed, which meant bed room for 56 men, who were supposed to sleep and wash and pass any spare time in this confined space. After we had worked a while at camp we asked the foreman what wages we were getting, as it really depended on him what we get, as he is the sole authority as to whether a man is earning his money or not. After many days I found that I myself was rated at $90. After a further delay of about two months the elder boy found out he was rated at $70, a loss of $20 a month. He put up a kick, as he was doing work for which other men were getting $100. He got a raise of $10 a month for the month of December, after two months' work. The younger boy got paid at about $55 a month, so you see that the wages were not what the agent promised.

"Now this is a camp called a Jobbers' Camp.—Muzzled loader beds; the floor was not washed for the time I was there which was 6 weeks; 2 small windows. Cook camp, sleep camp and horse stable under the one roof. If you do not believe these statements you can easily verify them by sending a good man to see for himself, but let him go as a worker, put in a week or two as a green hand in the bush and see the dirt. These are some of the prices we paid this last year: $10 for a pair of pants, $10 for a pair of moccassins, and other things in proportion."

Several of the charges made scarcely need any refutation. If the writer was really "soaked" $10.00 for a pair of trousers and $10.00 for a pair of moccasins, he certainly was an easy mark and should have had his eyes open to the fact that a fool and his money are soon parted.

An official of a leading lumber company, in discussing the letter, said that all reputable concerns owning and operating camps have an agreement with reliable employment agencies and that every man engaged by the agent to work in their camps is given a signed contract in which his rate of remuneration is stipulated. He added that jobbers' camps were operated somewhat differently and the jobbers generally brought gangs of workers from their own district.

The speaker said he had been in lumber camps frequently and had lived in them and had always found the men quite happy and satisfied. He added that any man who agreed to go to work in the bush without a signed agreement regarding what he should receive a month, evidenced that he must either be a greenhorn or lacking in foresight. He believed that the complainant in question was a man of little experience in lumbering.

So far as the allegation that certain men were not getting what it was promised they would receive, it is pointed out that a number of would-be lumberjacks misrepresent their qualifications and experience to employment agents. A lot of trouble arises over this. Not long ago a certain employment agent engaged a man who declared he was a good log roller. The first log he tackled rolled over him and nearly killed him. "This sort of thing is going on continually and, of course, we don't pay a man for work he is not fit to do just because he has told us that he can do it," declared the speaker.

It was asserted that all lumber firms are anxious to improve the condition of their camps especially as the heads of the firms have to spend some time there themselves. If there are any complaints in certain quarters, it is because the men themselves refuse to keep the places clean and take care of the fittings. It is most important that there should be undivided attention to this matter on both sides.

Looks For Bigger Shingle Demand

Fred. H. Lamar, the new secretary of the B.C. Shingle Association, Vancouver, recently denied the report that American shingles were being sold in Canada to the exclusion of the B.C. product. He said that the American market had for some time been a good one for B.C. shingles, and that eastern Canadian requisitions were also much more pronounced than they had been for some time.

"There are no American shingles coming in here," said Mr. Lamar. "As a matter of fact, the shipments of B.C. shingles that have been made across the line are greater than most people imagine. I may say," he went on, "that so far as the Americans under-

Fred H. Lamar, Vancouver, B.C.

selling us is concerned, it is the other way around. The local shingle is the better of the two, and the American consumer knows that that is so and is willing to pay a higher price in order that he may get a higher quality of shingles. I anticipate," he added, "that under the circumstances there will be a larger demand from the other side of the international boundary for B. C. shingles than there has been in the past six months."

Mr. Lamar went on to say that about the end of May or beginning of June would see a marked improvement in the prairie demand and he gave as his reason for that statement the fact that stocks are very low on the prairies and that every indication pointed to a bumper crop this year.

"It certainly will not be a time of boom buying," said Mr. Lamar. "The extent of the volume of business will depend upon the condition of the crop, but, as I have pointed out, everything is in favor of a big year for the farmers and that means heavier ordering of shingles and lumber as well."

Matters are now approaching normal, he stated, but it must not be expected that the demand will be such as to create a highly optimistic feeling.

Shipments of wood and manufactures of wood from the United States to Porto Rico increased in value from $1,900,863 in 1919 to $4,644,194 in 1920. The value of shipments of all merchandise increased 79 per cent. in 1920 as compared with 1919.

Lumber Firm May Supply Employees

Probable That Ottawa Company May Purchase Staple Foods at Wholesale Prices for Its Men

A suggestion, which may lead to one of the most important steps that has ever been contemplated by a lumbering company in Canada, is now under consideration by John R. Booth, Limited, Ottawa. It is to furnish the two thousand odd employees of the plant, with certain lines of staple food stuffs at wholesale prices.

The plan under consideration means that the John R. Booth, Limited, with its tremendous buying power will, if the plan is put in execution, purchase wholesale and sell only to its own employees on an absolute wholesale basis. The company, if it carries the project into effect, does not intend to enter into competition with retail merchants, but, on the other hand, desires to give its workmen the best food at the lowest possible rates.

With pulp and paper makers together with certain branches of the lumbering industry and manufacturing plants clamoring for higher, or, at least, last year's wages and the cost of the finished product going down, it is felt by some of the Ottawa Valley manufacturers that the discrepancy between the wholesale and the retail price of certain staple food stuffs is altogether too great.

One of the leading companies in the Ottawa Valley, for the purpose of combatting the claims of labor agents that the cost of living was not going down sufficiently to permit of a reduction in wages, has figuratively taken the bull by the horns and has tramped severely on the corns of such exponents. In fact, a comparative state of food stuffs has been furnished the Labor Department at Ottawa, showing costs of supplies usually used by a manufacturing lumbering company.

The statement, which is referred to later, shows that, by the computation of the lumber company from its records that the cost for a family of five which in 1920 was $15.26 is for the same articles to-day reduced to $8.17.

In a communication which has been sent to the correspondent of the "Canada Lumberman" at Ottawa by the company which filed the return with the Department of Labor, it is observed that the comparisons in the statement are made on the basis of a family budget for five persons and the articles selected are substantially the same as those given in the "Labor Gazette."

It is emphasized strongly that the decline in retail values has not been compatible with the fall in the wholesale quotations for the same commodities. The "Labor Gazette" gave the cost of the family budget for April, 1920, as being $16.36 and for 1921 as $12.62, which shows an approximate drop of about 23 per cent.

On the other hand, the decline in the wholesale prices is approximately forty-six and one-half per cent. According to the records of the firm, the retail prices were about ten per cent. higher than the wholesale price a year ago, while to-day by the same system of bookkeeping they are fifty per cent. in excess of the wholesale figures.

The statement furnished to the Department of Labor is as follows:—

Staple Food List

Comparison in cost for family of five between March, 1920, and March, 1921

Commodity	Cost in 1920	Cost in 1921	Percent drop in price	Quantity	Cost per family of five Cost in 1920	Cost in 1921
Bacon, (long clear)..	.27 lb.	.20 lb.	28%	1 lb.	.27	.20

					15.26	8.17

Ottawa Conditions Remain Practically Unchanged

The Ottawa lumber market during the opening period of May showed little or no change in comparison with the closing two weeks of April. Prices fortunately for the market remained firm. Stocks were about the same, and general conditions if anything grew worse instead of showing an improvement.

The whole situation as affecting sales and production, and on which the coming outlook is based, hinged on the attitude of labor. The crafts embraced in the building Trades Council went out on strike on May Day, as it was expected they would, following the firm stand taken by the members of the Ottawa branch of the Canadian Building and Construction Industries' Association, who insisted on a ten per cent. reduction in wages.

On top of this came the reliable information from the woodworking factories that a ten to fifteen per cent. cut was in effect in the larger plants. The Inside Woodworkers and Factory Workers' Union, up to May 10th, it was stated, were preparing to fight the issue, but if they do so seriously they are going to find themselves out of work. In short, with largely reduced orders and the plants making only reserve stocks, it is a very doubtful question if the factories will operate throughout the summer, with the amount of building that is promising.

The sawmills will not likely begin to operate up to any great proportions before the last week of May or the first of June. The correspondent of the "Canada Lumberman" has been given to understand that the manufacturers from this end have finally decided to cut wages from 12 to 15 per cent. in comparison with those paid last year, or, in other words, to revert to around the 1919 wage scale.

This year more than ever before it was apparent that labor as represented by the factory owners and manufacturers were out to reduce labor costs. The chances are they will do it even though it takes some months to achieve the goal.

Trade with Europe and the United States remained very dull. The domestic business was not anything to write home about, the principal demand being for mill culls and better for repairs and alterations. Logs at the mill ponds were not nearly as numerous as usual and the outlook for an increased sawmill cut this year, or a long season operation was not good.

There is plenty of rolling stock available. The chief trouble the trade has is, there is not being enough orders or shipments to fill the cars available.

Bad as conditions and the outlook were, the trade in several angles expressed hope and continued confidence that matters would, in time, satisfactorily adjust themselves. "We are passing now through a period of readjustment. Not only labor but the lumber trade has got to take its proportionate share of losses. If labor does not want to recede from its wages of 1920, then the lumber trade cannot operate successfully, and if it does not, then its non-operation will work finally to the detriment of labor and the cost of living," was the manner in which one of the leading lumbermen of the Ottawa Valley summed up the situation.

"You cannot force people to build unless they care to, whether labor costs drop or not. There is no use howling about the high price of lumber until the costs of other materials take a substantially larger drop. I think the whole situation depends entirely on the money market," was the explanation of the slow market which was given by a leading Ottawa Valley operator.

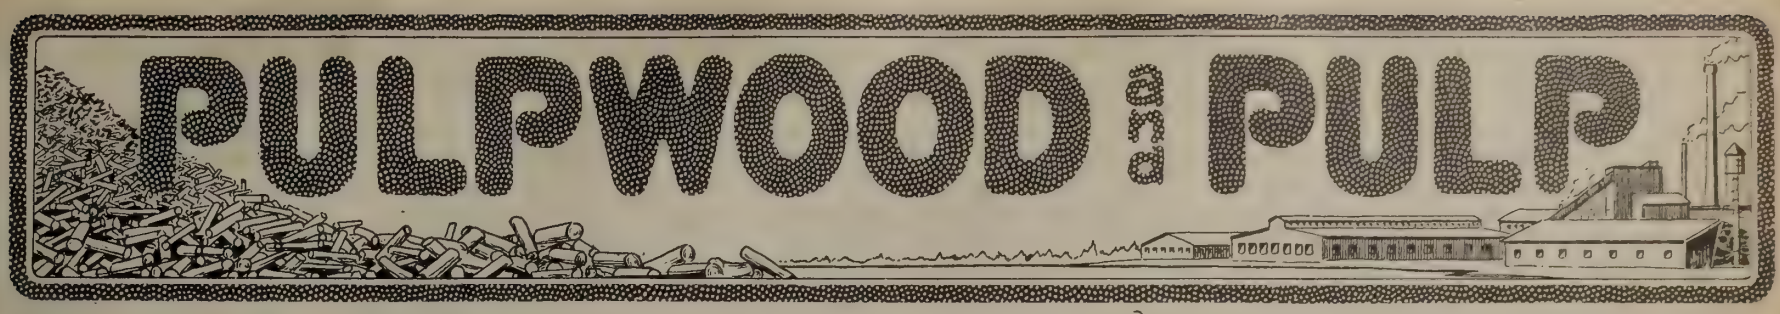
Many Dwelling Houses Are Going Up

During April the value of the building permits issued in Toronto amounted to $2,458,000, an increase of $321,000 over the corresponding month of last year. One gratifying feature was that 90% of the permits were for dwelling houses. The Toronto city architect's department has been very busy during the past few weeks issuing permits for new houses, which have been running as high as $100,000 a day. While the record for April was not broken in Toronto in the amount of permits, they came within $394,905 of the record year, 1912. when in April the permits totalled $2,842,905.

The total value of permits issued in Montreal for April was $1,011,535, as compared with $559,155 in March.

Alvan T. Simonds Economic Prize Awards

The prizes offered by Alvan T. Simonds, President of the Simonds Saw Manufacturing Company, Fitchburg, Mass., to encourage the study of economics in high schools and normal schools, of $1,000 and $500 for the two best essays on the subject "Present Economic Conditions and the Teachings of Adam Smith in the Wealth of Nations," have been awarded by the judges as follows. First prize of $1,000 to David Koch, High School of Commerce, New York City; Second prize of $500 to Aloysius Thiemann, Reedsburg High School, Reedsburg, Wis. Essays were submitted from every section of the United States and from Canada.



Protecting Pulpwood From Fire Fiend

In forwarding a subscription for a thousand dollars to the Canadian Forestry Association, Mr. Frank J. D. Barnjum of Annapolis Royal, Nova Scotia, calls attention to the unusual conditions obtaining in our forests at the present time. The small amount of snowfall of the past winter will probably mean low water and consequent dry conditions in the woods the coming spring and summer. This, with the enormous amount of dead dry trees which were killed by the spruce bud worm, increases the fire hazard to an extent greater than ever known in the history of timber lands in the provinces of Quebec, Ontario and New Brunswick, and he urges upon all railroads, forest fire protective associations and the public in general the importance of increased vigilance in the prevention and protection of our forests from destruction by fire. This is something that every man, woman and child in Canada has a personal interest in, as every mature forest tree that is killed means a matter of one hundred years to replace.

The Canadian Forestry Association is doing such good work that Mr. Barnjum feels it should have the hearty support of every citizen of our country, as there never was a time in the history of Canada when the protection of our forests was of greater importance.

Progress in Burning of Slash

The Dominion Forestry Branch is the pioneer in systematic slash disposal in Canada. On all timber sales in the Dominion forest reserves, this is one of the terms of the contract. Slash disposal is now generally in effect in timber sales on unlicensed lands in the Dominion forest reserves. Operators find that, once their men become familiar with the work and recognize that it must be done, the cost is by no means prohibitive and completion with timber cut under other conditions is quite possible. The stumpage revenues to the government are somewhat smaller by virtue of this requirement, but forest officers regard this as a good investment. On Dominion Crown lands, under license, slash disposal is not effective, these lands not being under the jurisdiction of the Forestry Branch. In consequence, the fire hazard in forest reserve lands is greatly increased.

In British Columbia considerable progress has been made toward slash disposal in the Coast region, and a beginning has been made in the Interior. This is largely the result of co-operation between the B. C. Forest Branch and the operators, though there is now legislation under which slash disposal may be made compulsory, the cost for the most part to be divided between the operator and the forest protection fund. On the coast, broadcast burning is the rule, this involving comparatively little additional expense.

In the eastern provinces, however, broadcast burning is not feasible to any great extent, partly because of damage to the remaining undersized timber, and partly because in many cases the soil itself is highly inflammable. As a rule, under such conditions, slash must be piled for burning, and this necessarily involves material expense, in addition to the cost of burning, which has to be done under careful supervision.

Combatting Forest Fire Scourge in East

The Forest Advisory Board of the Department of Lands and Mines for New Brunswick met recently and considered a number of matters connected with the fighting of forest fires as well as other items of departmental business. Hon. C. W. Robinson, Minister of the Department, was in the chair, and others in attendance were Archibald Fraser, J. W. Brankley, Deputy Minister Loggie and Chief Forester Prince. The Chief Game and Fire Warden, L. A. Gagnon, also was present.

The Chief Forester presented a report upon what had been done with regard to fire protection and what was intended. The report covered a variety of matters. The Canadian Forestry Association exhibition car will visit New Brunswick for the month of May, covering the counties of Restigouche, Madawaska and Gloucester.

A 30-foot lookout tower has been completed near Plaster Rock to cover about 2,000 square miles of forests and dangerous settlements on the Tobique watershed. The land is owned by the New Brunswick Railway Company, Fraser Companies, Limited, and the Crown. Both of these companies have approved of location and assisted in construction. The number of co-operative fire wardens employed by licensees which was 86 last year, was increased to 208 this year, and voluntary fire wardens have been increased to 439 this year from 130 last year. Road supervisors are appointed as fire wardens and all have received instructions with regard to fires.

The Board also considered facts obtained in an interview between representatives of the department and a delegation representing the licensees concerning the method of scaling logs. A proposition for a new log scale for logs under nine inches was taken. This matter is to be considered further.

A. T. Murchie, chief scaler, was appointed third member of the Board of Examiners in the place of J. W. Vanderbeck, M.L.A., who resigned.

The Pulp Possibilities of the North

By J. S. Dobie, C.E.

During the past year great industrial developments have taken place in different parts of Northern Ontario, and immense amounts of capital are being invested in the development of water-powers, construction of pulp and paper mills and similar enterprises. The Backus Syndicate of Kenora have secured from the Ontario Government the right to cut pulpwood over an area of several thousand square miles of country adjacent to the English River, in return for which they are to construct a large pulp and paper mill, develop a water-power and build a railway, the whole involving the expenditure of many millions of dollars. The Spruce Falls Pulp and Power Company are developing a large water-power at Kapuskasing on the National Transcontinental Railway. They are erecting a pulp and paper mill, and the Ontario Government is laying out what is expected to be a model town. This company will expend at least ten million dollars in developing this industry.

These are but two examples of what is being done in other parts of Northern Ontario. Meanwhile we do not appear to be able to attract even the passing notice of capitalists looking for favorable locations for such enterprises, and while these developments are taking place east, north and west of us, we are passed by, and our resources and raw material excepting for a few miles back from Lake Huron, remain as they were when the history of this country began.

Now what is the reason for this state of affairs? Why cannot some such enterprise be promoted to develop the resources of the country tributary to Thessalon? Does this country offer less inducements in the way of water-powers and timber wealth than those sections where such enormous developments are taking place? The answer is most emphatically "No."

Let us for a moment examine our potential assets and see what we have to offer in the way of inducements. Let us start at home. We have here in Thessalon a modern town; splendid schools and churches; modern conveniences such as water-works, electric light, first-class fire protection, etc., a splendid deep water harbor, several flourishing industries and a progressive up-to-date population of about two thousand people.

Now what have we back of this? This town is the outlet for a large territory lying between the "Soo Branch" and the "Main Line" of the Canadian Pacific Railway. This territory includes a number of townships upon which lumbering operations have been carried on for a number of years, and in which prosperous and progressive agricultural settlements have been developed. Lying north of these townships and included within the territory referred to, is the Mississaugi Forest Reserve, a vast area of virgin forest which is still almost entirely the property of the Crown, and upon which no lumbering has been done excepting upon a few townships along the south boundary. The Mississaugi Forest Reserve is not suitable for agriculture, and should be conserved for timber purposes under a forestry policy. A short summary of the resources of this territory is given herewith.

Great agricultural possibilities exist in the townships lying south of the Mississaugi Forest Reserve. A fair indication of what may be expected in the future may be obtained by considering what has been done in the past. No one familiar with this section during the past few years can fail to be struck by the advances made by the

farmers in this country. No section of Northern Ontario is better suited for mixed farming, and those farmers who have devoted their attention to stock-raising as well as to grain-growing, are in a most prosperous condition. Such a thing as a complete crop failure is unknown.

No section of Ontario's North Land shows a greater or a steadier growth, and yet only a small proportion of the land suitable for cultivation is under crop. There is no doubt whatever that the next few years will see a great increase in both the production of agricultural products of all kinds, and in the amount of land under cultivation.

There is in this territory a hardwood belt extending back for a distance of some forty or fifty miles from Lake Huron which contains hundreds of millions of feet of hardwood of a very great value. In the Mississaugi Forest Reserve there exists one of the largest blocks of white pine left in North America. While in the past the great bulk of the timber taken out of this country has been pine and other floatable timbers, the other timber resources have been largely neglected. There is in this section a very large area of hardwood, principally birch and maple with some oak, but owing to the difficulties in transporting this class of timber, very little attention has been paid to it, notwithstanding the high prices that it would bring.

The available stumpage of this class of timber in other places is every year becoming smaller, and the time is rapidly approaching when the exhaustion of other sources of supply will compel the development of this great hardwood belt, and in this development Thessalon is bound to play a most important part.

Within this territory there are vast quantities of pulpwood, sufficient to supply raw material for a large mill for many years to come, without taking into account the possibilities of making the supply permanent by means of proper forestry methods. This pulpwood is all tributary to the Mississaugi River and its branches, and can be driven down at minimum expense.

A large area of pre-cambrian rocks offering great inducements to prospectors as undeveloped mineral wealth is more or less uncertain, this will receive but passing notice for the present.

The Mississaugi River has a drainage area of some 3,000 square miles and there are several points easy of access, at which water-powers could be developed which would supply thousands of horsepower. The Mississaugi River is the only large river emptying into the north shore of Lake Huron on which no water-powers are at present developed. Is it reasonable that this condition of affairs should continue to prevail, in view of the tremendous hydro-electric developments on every side? These water-powers, in conjunction with the vast timber resources of the Mississaugi Valley, would form an ideal basis for the promotion of a large pulp and paper industry such as has been so successfully developed at Espanola, Sturgeon Falls, Iroquois Falls and other places.

The above brief summary of our resources shows that if industrial development has not come to us as we have had a right to expect, it is not because we are lacking in the necessary resources in raw material and water-powers. There is no valid reason why an enterprise somewhat similar to those recently promoted at Kenora and Kapuskasing, should not be promoted for the development of the resources of this country.

For some time past the Ontario Government has pursued the policy of offering sufficient inducements to capitalists, largely in the way of assuring them of adequate supplies of raw material at a reasonable price, to induce them to invest immense sums of money in the development of the pulp and paper resources of this country. This has been an established policy for some years past, and the present government has wisely continued along the same lines, with the result that tremendous developments have taken place in many sections of Northern Ontario.

Why cannot this policy be applied to the country back of Thessalon? This country is immensely rich in the very resources that are being so extensively developed on all sides of us. It lies right on the front street of Northern Ontario, yet with the exception of a comparatively narrow belt along the railway, our resources remain as they were when Columbus discovered America. Why?

Safety Progress in Pulp Plants

For some time past the problem of Accident Prevention has received considerable attention by the Canada Paper Co., Ltd., Windsor Mills, and the Brompton Paper Mills, Ltd., East Angus, Que. This interest culminated recently in Safety Rallies being held at both places. At Windsor Mills the campaign was opened by holding a meeting composed of the heads of every department in the mill to discuss the best method of improving the work of the accident prevention organization. Mr. F. J. Campbell, General Manager, conducted the meeting and the whole question of accident prevention was discussed with animation and many pertinent suggestions advanced. Mr. A. P. Costigane, Secretary and Engineer of the Ontario Pulp & Paper Makers' Safety Association, Toronto, who was present by invitation, outlined in a general way what was being done in Ontario by the Association that he represents. The following day a matinee was given for the benefit of men working on night shifts and school children. Each school in the town sent a strong contingent. Special Safety Films were shown amid general interest. In the evening a mass meeting of employees was held. The pictures were followed with close attention, and during the interval Mr. Campbell made a speech outlining the purpose of the meeting. Mr. Campbell was followed by Mr. Costigane, who dwelt on three phases of Accident Prevention, (1) Why Safety should appeal to employers, (2) Why Safety should appeal to employees, (3) How can results be obtained? The interest of the audience was held from start to finish. To give all members of the audience every chance of following the address, a resume in the French language was given by Mr. Beique, General Superintendent. The programme at East Angus was practically the same as at Windsor Mills. Mr. White, Chief Engineer for the company, acted as chairman, and was followed by Mr. Costigane, who in turn was followed by Mr. Bourgauth. The latter gave an abridged French translation of the address. Taken all round the experiment was most successful. There is a prospect that when the organizations in both mills are running in good shape, a friendly competition will take place between East Angus and Windsor Mills for the best accident record.

New Pulp Plant Starts at Fort William

The first groundwood pulp was produced during the past week at the plant of the Fort William Paper Co., Fort William, of which W. L. Bird is resident manager. Before many weeks pass it is expected the company will be shipping 120 tons daily. All the equipment of the new plant is installed and working satisfactorily.

Says Pulpwood Outlook Not Encouraging

Writing from Portneuf, Que., a leading dealer in pulpwood says: "Business is very quiet around this locality at present and has been for the past couple of months. About the only fellows who are active are those who entered into contracts for their pulpwood last summer and fall. Prices on spot lots of wood are lower now than they have been for the past two years practically, and even at that, there are no buyers. The outlook at present is, certainly, not encouraging. Consuming mills are still liquidating their present stocks."

Site Acquired for New Pulp Plant

It is expected that work will soon begin on the new 40-ton groundwood pulp mill which will be erected at Dixon Creek, near New Liskeard, Ont., by the Temiskaming Pulp and Paper Co. The company have purchased 53 acres of ground in Bucke Township as a location for the industry and the ratepayers of that township will vote upon a by-law on May 16th to grant a fixed assessment to the company, the president of which is Alex. Fasken, Excelsior Life Building, Toronto. If the by-law passes, construction of the plant will go ahead at once and will be carried out by day labor.

Jamaica has about 400,000 to 500,000 acres of forest, including cedar, mahogany, satinwood, rosewood, etc. A single sawmill stands near Port Antonio with a daily capacity of 10,000 feet of lumber and 5,000 to 10,000 shingles.

And Now—
Toronto Printers May Strike

THE present agreement between printers in book and job offices and employers in Toronto expires May 31. The minimum wage paid is $35.20 per week (increased voluntarily a year ago by the employers from $32.00, although the agreement had a year then to run). This wage covers a 48-hour week.

The International Union is demanding a week of 44 hours as the basis for all wage scales, and the Toronto unions are demanding a wage of $44.00 per week of 44 hours, $8.80 more per week for 4 hours less work.

This means an increase from 73 cents per hour to $1.00 per hour, or over 36%.

Publishers and other employing printers feel that under present conditions of business and the admitted decreasing cost of living, the increased wages and shorter hours demanded by the International Union are unreasonable.

This is acknowledged by many of the thoughtful, loyal printers employed in the Toronto offices, who believe that the International Union has blundered in its demand that local unions shall not sign new agreements except on the basis of the 44-hour week.

The position, however, may be that these local men may not be able to make the International officers in Indianapolis see, that to force a strike now on these unreasonable demands would be an act of folly—and a strike may be called on June 1st.

The facts of the case are presented here, for the information of the sections of the public—subscriber and advertiser—reached by this publication.
The attitude of the employing printers is shown by their voluntary action in giving a 10 per cent. increase last year while the agreement calling for the minimum wage of $32.00 a week had still a year to run.

They feel strongly now, however, that this is not a time when an increase of 36 per cent. in the labor cost of production should be permitted.

If publishers are forced to pay $44.00 a week instead of $35.20 and get only 44 hours of work instead of 48, it is inevitable that subscription and advertising rates must advance. No business can stand an increase in its wage bill of 36 per cent. and absorb that increase. The extra cost will have to be added to the sale price of the product.

Publishers sincerely hope that the great body of sane opinion among the local printers may prevail and that the Indianapolis (U.S.) officials will be induced to withdraw their unreasonable demands so that Toronto printers may continue to find well-paid, congenial employment.

If this sane, thoughtful opinion does not prevail, a strike seems inevitable, with its equally inevitable result of loss to the printers and publishers, and inconvenience and loss to the public.

An expression of the opinion of readers of this paper on the Union's proposals, involving an increase of 36% in the labor cost of printed matter, is asked. Will you not write a letter to the editor (not for publication) telling him your view of the situation.

This statement is published by and has received the endorsation of the Toronto publishers who are members of the

PROVINCE OF QUEBEC

Leasing of Water Powers and Timber Limit

Notice is hereby given that on Wednesday, **June 1st, 1921**, at 10.30 a.m., in the sales room of the Department of Lands and Forests, at Quebec, the following will be offered at public auction:

1. Different water power sites on the Megiscane and Bell Rivers, in the County of Temiscamingue;

2. A timber limit 400 square miles in area in the projected township of Louvicourt, Narrias, Tiblemont and Vauquelin, in the upper part of the Bell River watershed.

For fuller details and information please apply to the Department of Lands and Forests at Quebec.

ELZ MIVILLE DECHENE,
e.o.i.4-10 Deputy Minister.

TENDERS FOR PULPWOOD and TIMBER LIMIT

Tenders will be reecived by the undersign- up to and including the **4th day of July, 1921**, for the right to cut pulpwood and pine timber on a certain area situated in the vicinity of Long Lake, District of Thunder Bay.

Tenderers shall state the amount per cord on pulpwood, and per thousand feet, board measure, on pine, that they are prepared to pay as a bonus in addition to dues of 80 cents per cord for spruce and 40 cents per cord for other pulpwoods, and $2.50 per thousand feet, board measure, for pine, or such other rates as may from time to time be fixed by the Lieutenant-Governor-in-Council, for the right to operate a pulp mill and a paper mill on or near the area referred to.

The successful tenderer shall be required to erect a mill or mills on or near the territory and to manufacture the wood into pulp and paper in the Province of Ontario.

Parties making tender will be required to deposit with their tender a marked cheque, payable to the Honourable the Treasurer of the Province of Ontario for fifty thousand dollars ($50,000), which amount will be forfeited in the event of the successful tenderer not entering into agreement to carry out con ditions, etc.

The said $50,000 shall remain on deposit until the pulp mill, as provided by terms and conditions of sale, is erected and in operation. Any timber cut in the meantime shall be subject to payment of dues and bonus as accounts for same are rendered. After the said pulp mill is erected and in operation, the deposit of $50,000 may be applied on account of bonus dues as they accrue, but the regulation dues as mentioned above shall be paid in the usual manner as returns for cutting of wood and timber are received and accounts rendered.

The highest or any tender not necessarily accepted.

For particulars as to description of territory, capital to be invested, etc., apply to the undersigned.

All tenders should be enclosed in sealed envelope and marked plainly on outside "Tender for Long Lake Pulp and Timber Limit."

BENIAH BOWMAN,
Minister of Lands and Forests.
Toronto, January 24th, 1921.
N.B.—No unauthorized publication of this notice will be paid for. e.o.i.-4-13

Bush For Sale

100 acres heavily timbered in Maple, Black Birch in Lutterworth Twp. on shore of Gull Lake.

R. FLEMING,
41 William St.,
10-13 North Lindsay, Ont.

TENDERS FOR PULPWOOD and TIMBER LIMIT

Tenders will be received by the undersigned up to and including the **15th day of June, 1921**, for the right to cut pulpwood and pine timber on a certain area situated on the Nagagami River and other territory adjacent thereto, in the District of Algoma.

Tenderers shall state the amount per cord on pulpwood, and per thousand feet, board measure, on pine, that they are prepared to pay as a bonus in addition to dues of 80 cents per cord for spruce and 40 cents per cord for other pulpwoods, and $2.50 per thousand feet, board measure, for pine, or such other rates as may from time to time be fixed by the Lieutenant-Governor-in-Council for the right to operate a pulp mill and a paper mill on or near the area referred to.

The successful tenderer shall be required to erect a mill or mills on or near the territory and to manufacture the wood into pulp and paper in the Province of Ontario.

Parties making tender will be required to deposit with their tender a marked cheque, payable to the Honourable the Treasurer of the Province of Ontario for fifty thousand dollars ($50,000), which amount will be forfeited in the event of the successful tenderer not entering into agreement to carry out conditions, etc.

The said $50,000 shall remain on deposit until the pulp mill, as provided by terms and conditions of sale, is erected and in operation. Any timber cut in the meantime shall be subject to payment of dues and bonus as accounts for same are rendered. After the said pulp mill is erected and in operation the deposit of $50,000 may be applied on account of bonus dues as they accrue, but the regulation dues, as mentioned above, shall be paid in the usual manner as returns for cutting of wood and timber are received and accounts rendered.

The highest or any tender not necessarily accepted.

For particulars as to description of territory, capital to be invested, etc., apply to the undersigned.

All tenders should be enclosed in sealed envelope and marked plainly on outside, "Tender for Nagagami Pulp and Timber Limit."

BENIAH BOWMAN,
Minister of Lands and Forests.
Toronto, January 24th, 1921.
N.B.—No unauthorized publication of this notice will be paid for. e.o.i.-4-11

Models or Blue Prints?

The Winnipeg Home Builders' Exposition illustrated to a high degree the interest that the public takes in model houses as against blue prints.

To the layman a house plan or blue print means little or nothing in conveying the idea of what the finished building would be. Almost all lumber dealers have plans which are at the disposal of any one interested, but it takes a trained eye to read a plan in such a way as to get a mental picture of what a room or house would be like when there are only a few lines to go upon.

This was shown at the Exposition by listening to the comments of people who were constantly grouped about the different models exhibited. In some of these models it was possible to see the arrangement of the rooms. This is what the public wants, any person can get a comprehensive idea of what the completed home would be if he can see practically the same thing in minature.

Hundreds of plans were on show at the exhibition while there were not more than half a dozen models of houses, but the latter easily came first in attracting the attention of visitors for each was surrounded by people discussing the relative merits of the different styles. One model was particularly favored. It was just a square type house with wide eaves, but the arrangement and proportion of the rooms told a plainer story than any blue print could have done. It had polished floors, and even papered walls. Electric lights were hung inside the model to show the interior arrangement.

One or two model houses of a popular style as part of the display scheme of any lumber office would do much to interest customers in building and cause them to make enquiries which would often lead to business.

The main thing would be to get the public to come and see the models. A lumber office might be full of them but unless visitors came in to look they would not accomplish much. A yard that has a number of models could advertise them as being open to inspection and thus create far more interest than offering to provide plans for houses.

Review of Current Trade Conditions

Ontario and the East

It is somewhat difficult to present a comprehensive review of lumber conditions that prevail in Ontario and the east. Different reports are received from various centres, and in larger cities and in some of the smaller towns, where retailers are content to take a loss on their stock, they are sending out truck-loads and wagon-loads of material in large quantities. Other dealers complain that business is slack and that building is very slow to open up. Manufacturing concerns are only operating at part capacity and the expected improvement, which was to occur in buying, has not so far materialized.

There is no doubt that dealers in all lines of wood will suffer a financial reverse on stocks purchased last year, which so far have not been disposed of. Gradually the unloading process is proceeding and with it prices have been cut to the lowest notch. While a few carloads are moving, they are mixed lots, and a leading wholesaler remarked the other day, "Here is an order for two cars from a firm which should, under normal conditions, be taking five or six, and in the two cars there are nine different lots of stuff on which we have been obtaining prices from various concerns." Buying is still going on from hand to mouth, but the uncertainty in connection with the price situation is causing many dealers and wood-using industries to hold back from any excessive stocking-up.

Most of the sawmills started operations during the past two weeks and are working on a ten-hour basis with a cut of from 10% to 20% in the wages of ordinary help, and in some cases higher on unskilled jobs. Head sawyers, filers, doggers, setters and other skilled labor have, in some mills, not had their pay sliced, but ordinary labor is so plentiful that even if any of the regular hands did object to taking a cut, others were ready to come forward in their stead. Just how long the mills will operate this season will depend very much upon the condition of the market, the trade outlook for fall and the price situation generally.

So far few, if any, large stocks have been sold. Manufacturers are generally quite firm in their prices and do not seem to want to come down very much from what they obtained for their cuts last year. They maintain that their logs have cost them from $2.00 to $5.00 more per M during the past winter than a year ago, and the only saving they will be able to effect will be on the driving, towing and sawing, which will not be very much.

It is contended that the price of hemlock and spruce and jack pine are now below the cost of production from 10% to 20%—a difference of from $15.00 to $20.00 per M is reported on the prices which wholesalers want to pay and which millmen are asking for merchantable hemlock, box and better white pine and mill run spruce. Just whether a price adjustment will be reached at an early date may not be known for some time.

There is no disposition for the wholesaler to load up with a heavy stock as he cannot induce the retailer to buy, and the feeling is that the manufacturer may have to carry the load at least for some time.

White pine is a wood which has been holding up the best in the present price deflation, but there are some who say that, owing to the demand decreasing perceptibly of late, there will have to be a drop of several dollars before stabilization will be established. The prevailing prices last year for white pine cuts, box and better, was $65.00; merchantable, $47.00; spruce, $48.00 to $50.00. Of course, much depends on how the building situation looms up in the latter part of May and June. There is considerable house construction going on in the larger cities, but the industrial erections are few and far between. The largest job in Toronto will be the live stock arena to be erected on the Canadian National Exhibition grounds. The Anglin-Norcross Co. of Montreal, who tendered for $893,000., will likely get the job, their bid being the lowest. The structure will be of steel frame with concrete ground floor, while the walls will be brick. The second floor and the roof will be of wood, the covering of the roof copper sheeting. For the flooring three-quarters of a million feet 2 x 6 dressed and matched No. 1 common fir or white pine will be used, and there will also be requistioned 300,000 feet of small B.C. fir timbers 2 x 8, 2 x 10, 6 x 8 and 8 x 8. There is a report that the structure may not be proceeded with until after the Exhibition in September next. The question will be settled in a very few days.

One noticeable feature during the past few weeks is that wholesale and retail trade seems anxious for a stabilization of values. While the reduced freight rates have not yet had any material effect upon the demand for B. C. material, it is felt that an improvement will be noticeable from this out as No. 2 shiplap and boards and No. 2 dimension can now be brought from the Coast to Ontario and sold at a price to compete successfully with yellow pine, Ontario, Michigan and Wisconsin hemlock.

Another feature of the trade is that the demand for southern pine has fallen off considerably and so have the orders for Wisconsin hemlock. There was a certain amount of novelty or excitement in getting in these low-priced woods a few weeks ago, particularly southern pine, and many wholesalers went into the handling of yellow pine. Retail lumber dealers, however, have begun to recognize that, in many respects, the short-leaf yellow pine is not nearly as good for construction purposes as Ontario hemlock or B. C. fir. It neither gives the same value nor service, and it is declared that it will not stand exposure to moisture, decays very quickly and is liable to split. The article is not by any means what it should be, and some dealers are becoming backward about placing any further business.

The recent reduction in freight rates in the west will, it is thought, materially affect the situation and allow Canadian stock of the west to be sold in the east at a figure that is satisfactory, and will enable the average retailer to spend his money in the Dominion and help correct the adverse trade balance that has been defacing the value of Canadian currency from 10% to 18% ever since the close of the war.

United States

Business seems to be improving slowly but no great change is looked for until money loosens up. The majority of yards are buying a little more freely but business in many centres is still hampered by labor troubles and the refusal of artisans to take a reduction in wages.

There are no new features presented in the hardwood market but some material changes may be recorded in the next few weeks. During the past few days there was a slowing down in the demand for hardwood lumber for interior finish, owing to the uncertainty regarding what action labor would take during the first few weeks in May. While there is a good deal of projected building, contractors and others have been holding off until the wage and hour situation have become settled. There are, of course, many other industries using hardwood lumber, but none of these are in full operation.

The demand for furniture and other allied lines is not such as to justify any great hope of activity during the first six months of the year at any rate. It is felt, however, that basic conditions are generally getting better and a little more optimism prevails in the trade from time to time. There is some improvement in the southern pine situation and that a distinct upward turn is evident is emphasized by the fact that firms which usually hold off from buying, are placing fairly heavy orders. Many dealers last week reported business heavier than at any single week during the past six months, and say that bookings are keeping up well so far in May. There is a tendency for prices to be a little steeper.

The amount of hemlock moving is considerably below normal for this season, but the number of inquiries is indicative of a better future for the market. In fact buyers are being forced to take hemlock by a shortage of southern pine or Douglas fir dimension or their inability to get some items, or else as a result of putting off ordering too long they are forced to turn to the nearest source of supply. The volume of inquiries has shown a decided increase and these inquiries are beginning to result in orders. Stocks on hand are very light, and while as yet the mills have little difficulty in filling orders, it can not be expected that they will be able to continue to do so for long.

One eastern authority, which generally gives close attention to the situation, says that building is now at a low ebb and depression in the lumber business has entered upon its last stage, viz., strikes against necessary wage reductions.

Railroad freight rates have stifled industry so that in April the figures for idle freight cars reached over 500,000. Rates must go down before business will return to normal.

In conclusion, the same authority remarks:—

To sum up—this is low tide and this month should see the smoke lifting—win the strikes—cut freight rates, and clear the way to a revival of European trade by a definite settlement with Germany.

Spruce and fir prices have been weaker, particularly in laths and random. One cargo of Nova Scotia random was sold at $30.00 and we understand the best bid on another was $28.00 delivered New

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

"Rush Orders Rushed"

Cleveland-Sarnia Sawmills Co., Limited

SARNIA, ONTARIO

B. P. Bole, Pres. F. H. Goff, Vice-Pres. E. C. Barre, Gen. Mgr. W. A. Saurwein, Ass't. Mgr.

York Harbor, subject to regular terms. As Boston prices on laths have dropped to $7.50, our market is correspondingly weaker.

Conditions will get no worse—the turn of the tide is in sight, but bear in mind that the rise in the tide will be largely in activity rather than immediate higher prices, and all the while manufacturing prices must be kept down.

Great Britain

Business in the lumber line shows really no change and the effects of the recent strike and the unsettled industrial position are being felt. It is stated that trade has reached such a low level in many places that it could scarcely be worse.

Speaking of the recent upheaval and how it is regarded by the timber trade, "Timber" says: Although in the end, the timber trade, like all others, must suffer from the waste and the dislocation of industry which is now proceeding, yet very few immediate effects of the strike can be traced in the wood market. Housebuilding, which is the main hope for timber merchants this year, is being pushed on; more men are employed, and more timber is used, but there is not the slightest improvement in general business, and until the other industries of the country revive, there will be no disposition on the part of importers to make contracts. There is sufficient stock in the country to last for many months to come at the present rate of consumption, and the spirit of speculation is nowhere to be found.

The Continental markets are just as quiet as ever. In fact, the attitude adopted by the importers in France and Belgium is to wait until the English buyers commence. There is a great shortage of wood in these countries, and large quantities will be wanted for the rebuilding of the war-destroyed areas, but not only are importers heavily handicapped by the adverse exchange, they are afraid to make any purchases until values are established. There is, of course, the possibility of a further drop of considerable magnitude. As our readers know, the present quotations of the united shippers in Sweden and Finland are based on £30 for 7 in. from Sweden and £27 to £28 from Finland, for the prime stocks. In the latter country the smaller makes are allowed to sell at £24 10s., while some of the shippers outside the Union quote £16 to £17 for mixed specifications. Importers, therefore, argue that if prices had dropped from £26 and £27 to £16 and £17, they may easily come down another £5, and the risk of purchasing therefore is too great.

In Denmark and Holland, so much cheap German wood can be had that there is no demand whatever for the Scandinavian productions. Trade is not good, and no one is inclined to lay in stock. All over the world we have reports of a similar nature. South Africa, which was such a good market last year, is doing nothing. Large purchases were made in the early days of 1920, in many cases shipment was delayed, and the wood did not arrive until the slump in industry had commenced. Importers have thus lost very heavily, and many of them have now on their hands goods purchased at top prices; and with no prospect of any outlet except at a ruinous loss. Australia is also in a bad way, and there is no inquiry from that country.

Recent despatches from Liverpool say:—

The ominous clouds gathered over the industrial world have had, and are having, an effect upon the timber trade in this centre. Transactions recently have been of an isolated character, and the supply of timber disposed of principally been required to satisfy pressing needs. Further, many consumers have of recent weeks postponed purchasing through their usual channels, with a view to procuring their wants at the auction sales held here during the present and last week.

Now that the auction sales of softwoods are concluded, i.e., those already advertised, we would recommend consumers, particularly in regard to spruce, to turn once again and support their well-tried friends, the merchants. Only a small proportion of the total volume of spruce offered at Alfred Dobell & Co.'s auction sale was disposed of, the prices offered for the bulk failing to reach the reserve figures placed upon the goods. Perhaps, in the circumstances, the holders of these goods will fight shy of endeavoring to repeat their experience, but by once again approaching the legitimate importers, they may quit the goods at equitable market prices.

The majority of the Liverpool softwood trade, as is only to be expected, do not care for the inauguration of auction sales in this centre, whether held on behalf of shippers' agents here or the Associated Importers, Ltd. The sooner the appetite for auction sales is appeased the better it will be for all concerned, is the opinion pretty freely expressed nowadays by many in the local trade.

No forward business in spruce is likely to be negotiated for some time to come, as holders of stocks on this side are more concerned with liquidating their present stocks than adding to them. The c.i.f. market for pitch pine logs and lumber is likewise non-existent for the time being. The plums procured by the respective purchasers at last week's auction sale will need first to be digested.

The yellow pine trade shares the fate of other classes of softwoods in meeting with but little demand, although values in this commodity have not yet depreciated to any great extent.

Market Correspondence

SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD

Fair Amount of Stock Moving in Montreal

Conditions on the Montreal market are practically without change. A fair amount of stock is moving, but generally at prices which are not profitable either to manufacturers or wholesalers. The latter state that they have purchased little or no stock from the mills —they are playing a waiting game. Some of them have already too much stock on hand, part of it bought at high prices. Under such circumstances, and in view of the uncertain position in the future, wholesalers are not willing to make further financial engagements.

Prices do not show any sign of appreciation, nor are they likely to do so until some more stocks have been disposed of, which depends upon a revival in general trade. The keen competition has had a two-fold effect—it has influenced possible buyers in the direction of deferring purchases, and has also resulted in the bottom being knocked out of the market so far as prices are concerned. The possible buyers have used the various offers received, low as they are, to get further reductions by making the sellers bid against each other, and to meet successive cuts. This has naturally produced a feeling that values have not yet touched the lowest point, and that further waiting will mean still cheaper lumber. Some stocks had of course to be liquided, but the forcing of a considerable quantity on to a listless market has been a great factor in the present unstable condition and range of low prices.

It is reported that a fair amount of the 17,000,000 feet of British Government stock bought by H. Peladeau, Limited, has been disposed of.

As stated in another column, the building outlook is brighter, but for the time being there is a lull in construction. Many schemes are in prospect, and if these will only materialize there will be plenty of work. Montreal permits for last month totalled $1,445,640, a decrease of $1,412,525, while for the four months the total was $3,188,-355, a decrease of $1,229,296.

The export season has opened in a very slow fashion. Practically nothing has been shipped to the U. K., advices from the other side being of a decidedly discouraging character. Demand is not only slow, but prices are very low—so low that exports from here fetch values which will not pay. Freights are down to 100s. per standard, which represents a substantial decrease on rates ruling last season.

Canadian exports of pulp and paper for the month of March were valued at $12,407,476, a gain in value of $738,680. Paper showed a very substantial increase, but chemical pulp at $2,237,771 was $1,637,510 lower, and mechanical pulp at $284,092 decreased $278,216. For the 12 months ending 3rd March, pulp and paper exports totalled $163,655,344, a gain of $5,010,443, chemical and mechanical pulp showing the largest relative increases.

Quebec Lumber Conditions Show No Change

There is no change whatever in the lumber trade as far as it concerns the Quebec City and district interests, and the executive heads of leading manufacturing firms are reluctant to express an opinion. Mr. Gerard Power, president of the W. & J. Sharples Co., Reg., who attended the Chicago conventions of the National Wholesale Lumbermen's Association of the United States, and the National Manufacturers' Association convention, also held at Chicago, had very little to say in connection with these two important meetings. In answer to inquiries, Mr. Power said nothing practical as to business encouragement occurred. All present seemed to be groping for information that would lend encouragement. "However," added Mr. Power, "not one of the delegates to either conventions were cast down. They realized that the trade was passing through a crisis due

to conditions of unrest that would ultimately pass away and bring about renewed confidence."

Judging from reports of conditions being received from the United Kingdom markets, very little business relief can be expected from overseas during the present year. Quebec business representatives have come back without orders, and report that though the imports into the United Kingdom have been light during the past months, they have on the aggregate exceeded the deliveries, and trading conditions are unsatisfactory. They emphasize that the general demand is inactive and values almost without exception exhibited weakness. Ocean freights are offered at lower rates but this is of no avail from the fact that no freight is being offered. One feature in the London auction sales of foreign lumber is sufficient to demonstrate the dullness of the market. The quantity offered from Norwegian and Swedish countries is unqualifiedly large and bidding slow and cautious. The labor unrest and strikes are the cause of destructive trade conditions in every line of business, and the tightness of money, as well as the tardiness in the settlement of the war question and France's claims for reparation from Germany. That is holding up the entire economic life of all European countries.

In the southern sections of the United States where lumber operations had ceased, they are now being re-opened and continued, and colored labor, who were paid $3.50 per day, have consented to work for $1.50 per day, which enters as a formidable competition with Canadian operators unless Canadian labor in the woods and in the mills consent to an appreciable reduction in their wages. The Quebec manufacturers, closely following these changed labor wage conditions in the Southern States, will insist upon labor wage reduction or else be forced to curtail their operations next winter to a large extent, even at the risk of impairing their organization.

The pulp and paper mills have taken initiative with determination of obtaining results. Construction is still lagging in Quebec City as well as other Canadian cities. There is a tremendous demand for stores and private dwellings in Quebec where the population is increasing daily. Nevertheless, investors will not put their money in property at the present high cost of building material. The cry is not against the price of lumber that has come down 24 per cent., but against cement and hardware maintaining their war prices and labor, especially the arrogance of the latter in its demand, shorter hours and less production.

In the meantime it must not be thought that the Quebec lumbermen are pessimistic. On the contrary, they have every confidence that the present crisis will pass away, but, until the clouds roll by, they mean to manage their business conservatively without risk of any possible sacrifice.

St. John Reports That Prices Have Gone Lower

Two more weeks have rolled around and to-day prices are yet lower than they have been for years. Each week sees small reductions, but demand seems to be increasing in the American market and orders, even though lower in price, are more numerous. There is a certain amount of stocks, both old and new, which must be cleaned up. Lumbermen need money to pay their banks and floating paper are forced in some cases to take what they can get. Random spruce running 8 to 16 feet, averaging 13½ to 14 feet, 2/3, 2/4, 2/6, 2/7, 3/4, 3/6, is only averaging about $25.00 net at mills. This is a reduction of about $3.00 per M in the last two weeks. No doubt the large American yards realizing conditions are buying these stocks, and as they are below production costs, the yards make no mistake in purchasing. Random 2 x8 is netting only about $32.00 per M at mills, while 2 x 9 and 2 x 10 about $35.00. Murray & Gregory, Ltd., and Stetson, Cutler & Co., are each operating one mill at St. John, the former cutting short random and the latter long deals for the British market.

Shingles have also been reduced and sales are being made at bargain prices. Unless shingle prices improve, little sawing of cedar will take place.

Laths are also weaker but a good demand keeps them in a firmer market than long lumber.

Certainly from a demand standpoint the market is better in the United States and car orders are easier to get if one wishes to sell below cost. The banks are maintaining a firm stand on further borrowing until stocks are cut down and sold off. English trade shows no improvement and evidently from all appearances will remain dormant for some time to come. The consumption in the British Isles seems good, and, with some improvement in the cotton trade and the strike settled, business in Great Britain will, certainly, revive.

Freights are still being reduced but very little cargo can be had at St. John at prices now pertaining.

National Hardwood Lumber Convention

The 24th annual convention of the National Hardwood Lumber Dealers' Association will be held at the Bellevue-Stratford Hotel, Philadelphia, Pa., on June 9th and 10th. It is expected that there will be a remarkably large attendance as many matters of importance are to come up for consideration.

George C. Goodfellow, Montreal, is a member of the board of directors of the association, the president of which is Horace F. Taylor of Buffalo; John W. McClure, of Memphis, Tenn.; B. C. Currie, Philadelphia, and W. C. Hull, of Tupper Lake, N.Y., are vice-presidents, while Frank F. Fish, Chicago, is secretary-treasurer. A large number of Canadian firms belong to the association and several delegates will attend from the Dominion.

The Inspection Rules Committee, of which John W. McClure is chairman, are making certain changes and recommendations in regard to the N. H. L. A. rules. None of the proposed changes, however, are of a radical nature and are not likely to be provocative of much opposition.

Country Must Buckle on Trade Armor

Every year a party of members of the Senate, at the invitation of Senator Smeaton White, inspect groups of industries in the Province of Quebec. This year they visited Sherbrooke where they visited, among other plants, those of the MacKinnon Steel Company, and Canadian Ingersoll-Rand Company.

Mr. F. N. McCrea, M.P., president of the Brompton Pulp & Paper Company, East Angus, was among the speakers at the dinner in the evening. He emphasized the importance of both employers and employed doing their share in readjusting conditions. "We cannot do it by standing at street corners. It is up to the men to-day not to be too scrupulous about hours, while it is up to the employers to provide the very best working conditions and to pay the highest wages possible. It is up to employees to give full value for consideration received. The country must buckle on its armor, and go out and look for business, and if we do this we will be able to overcome our troubles."

Permits for $21,000,000 worth of buildings were issued in Canada during April, according to the MacLean Building News. Of these $11,000,000 were in Ontario. During March permits for buildings valued at $10,000,000 were issued; $17,000,000 in February and $8,000,000 in January. Of the permits issued during April 1,823 were for houses valued at $9,451,300.

EDGINGS

Charles Savard will erect a new sawmill at St. Fidele, Charlevoix County, Quebec.

Fredericton, N.B., timber workers' union expelled six members who worked a ten-hour day in factories there.

Fire broke out in a shed at Ainslie's sawmill in Comber, Ont., recently, but the flames were extinguished before much damage was done.

Edward Myette recently met death in the woods near Mattie Settlement, Antigonish, N.S. His body was found under a log which in falling had struck him on the head, killing him instantly.

Shingles have been going to the Atlantic coast in large quantities via the Panama Canal, one of the principal shippers being the Dominion Shingle & Cedar Co., which has plants on the Fraser River.

A partnership known as S. Godwin & Sons was recently formed at Bathurst, N.B., to conduct a retail lumber business. The partners are S. Godwin, W. Godwin and A. Godwin, all of Bathurst, N.B.

The main building and contents of the Clayton Lumber Mills, three miles north of Cloverdale, B.C., were destroyed recently. The loss on the mills and planing plant is estimated at $20,000 and is partly covered by insurance.

Chas. D. Street died recently in Vancouver at the age of 74 years. He was a native of Andover, N.B., and for the past 14 years had been shingle inspector at the Hastings shingle mill. He is survived by his wife, three sons and one daughter.

The Ideal Lumber Co. is opening a new retail yard in the east end of Hamilton. The site consists of five acres with excellent railway accommodation and a new lumber shed over 200 feet long has been built to take care of the dressed stock.

American railways have officially notified business interests at the coast that the 8-cent arbitrary against B. C. points hitherto maintained by those roads has been abandoned. The new tariffs now issued do not show the rate. The new tariff includes all routes.

Over 29,000 trees have been planted in the parks and on the streets of Calgary since 1912 by the Parks Board of that city. What these trees will mean in comfort for the pedestrian and in the appearance of the city in a few years can hardly be appreciated.

Plans are being prepared by the Conklin Planing Co., Kingsville, Ont., for a new planing mill and office building to cost approximately $25,000. Mr. W. T. Conklin, proprietor, expects construction to be under way early this summer.

Portage Consolidated, Limited, Portage La Prairie, Man., have been incorporated as general merchants in lumber and other building supplies. Capital, $50,000. Two of the incorporators are J. Barrett and Duncan McCuaig, both of Portage La Prairie, Man.

For the first time on record, a vessel, the Canadian Voyageur, of the Canadian National Line, will bring a cargo of lumber from Vancouver to Montreal, via the Panama Canal. The vessel will load two million feet of timber for the Canusa Export Company, Limited.

Manufacture de Chassis du Saguenay, Limited, Chicoutimi, P.Q., have been incorporated to conduct a general lumbering business manufacturing and dealing in forest products. Capital, $20,000. A. Routhier and E. Boivin, both of Chicoutimi, P.Q., are two of the incorporators.

A further cut on the cost of putting logs into the water is expected in British Columbia, as logging operators complain that there is no margin of profit. Wages now are about 30 per cent. lower than a year ago, and the camp operators are talking about another 25 per cent. cut.

M. A. Grainger, managing director of the Timber Industries' Council of British Columbia and former Provincial Forester, was recently presented by the Provincial Forestry Branch and Hon. T. D. Pattullo, Minister of Lands, with a handsome illuminated address as an appreciation of his services.

The Moose River Construction and Development Company, Limited, Kapuskasing, Ont., was recently incorporated to conduct a general lumbering business in all its branches. Capital, $100,000. H. B. McKinnon of Kenora, Ont., and L. D. Stuart of Kapuskasing, are two of the incorporators.

The Service Lumber Company, Limited, Russell, Manitoba, was recently granted a provincial charter to conduct a retail lumber business dealing in all kinds of wood products. Capital, $10,000. Sydney Cubbon, of Russell, Man., and Albert Miller, of Moose Jaw, Sask., are two of the incorporators.

The Whicher Lumber Company, Limited, Colpoys Bay, Ont., was recently incorporated to take over the business known as Whicher & Luncke and to manufacture and deal in lumber and timber. Capital, $50,000. C. E. Whicher and C. H. Wicher, both of Colpoys Bay, Ont., are two of the incorporators.

With the delivery of the freighters "Canadian Harvester" at Port Arthur; the "Canadian Logger" at Midland; and the "Canadian Pathfinder" and the "Canadian Engineer" at the Toronto yards of the Collingwood Shipbuilding Company, the building programme for the Canadian Merchant Marine, will be completed.

Despite the strike declared by union employees when the various lumber companies in the St. John valley demanded the return from a nine-hour wartime day to one of ten hours, it is announced that the sawmill concerns are getting all the help required to work their plants and that operations are now being carried on at full time.

Canadian Paper Box Manufacturers' Association, Toronto, has been incorporated to uphold and increase the standard of efficiency throughout the paper box industry in Canada. Among the incorporators are C. T. Reid, Hamilton, Ont.; J. H. Lefebvre, Montreal, and W. P. Bennett, Toronto.

The Belgian Industrial Company, Limited, Montreal, was recently granted a federal charter to conduct a business as manufacturers, exporters and dealers in logs, lumber, pulpwood and other forest by-products. Capital, $1,000,000. Among the incorporators are the Honorable William James Shaughnessy, K.C., and Chilion Graves Heward, both of Montreal.

Preparations for spring log drive for the D. R. Fraser and Company's

mills are proceeding apace on the Saskatchewan, booms are being towed into place and attached to the piers, and in general the activities in vogue are reminiscent of a past chapter in the history of Edmonton now re-opening. In the region of the low level bridge the booming is practically complete.

The Western Canada Pulp and Paper Company announces the removal of its head offices to Toronto, from Vancouver. H. J. Daly, president of the Home Bank of Canada, is now president of the company, succeeding Mr. E. M. Davis, and Mr. H. Helin has been appointed general manager in British Columbia. The company's plant at Port Mellon is likely to resume operations at once.

Archie G. Miller, a millwright of Fort William, was electrocuted recently in the Fort William Paper Mills, 2,200 volts passing through his body. Miller was in the slasher room of the new pulp plant for the purpose of turning on the power of one of the 21 horse-power motors. He closed the heavy switch and upon the instant contact was made, he was knocked down, a short circuit evidently existing in the switchboard.

A travelling school in forest protection, in the novel form of a railway coach elaborately equipped with forest exhibits and educational arguments for forest conservation, is at Bonaventure Station, Montreal. This makes the second railway car to be similarly equipped at Ottawa by the Canadian Forestry Association and sent on the road for educational work. The car will stay here two days and will then tour New Brunswick, later working through Quebec and Ontario.

One of the three Curtis seaplanes owned by the Laurentide Company, Limited, fell from about 4,000 feet on May 4, near Grandes Piles. The machine crashed into the forest. Captain Maxwell, the pilot, broke his collarbone; Romeo Vachon, his mechanic, received some scratches, and W. E. McE. Bowden, a passenger, was bruised. The machine was seen to fall by an employee of the company, who obtained assistance. The injured men were conveyed to the hospital at Grand Mere.

The death took place recently at his home in Chaplin Island Road, N.B., of William Campbell at the age of 88. Mr. Campbell was born at Shippegan, Gloucester County, and came to Newcastle when a very young man, where he first worked for the Harding Lumber Co. He later engaged in the lumber business and continued this as well as taking up farming, about 58 years ago. He was generous, kind-hearted and charitable and very well-liked among his associates. Deceased is survived by his wife; one son, Norman, C. I. Road, and one daughter, Mrs. Awls, at home.

The plant of the Mill Cut Homes & Lumber Co., Limited, 13th Ave and Arbutus St., Vancouver, was recently destroyed by fire. J. L. Northey is the manager of the company. The concern manufactured ready-made houses, and all the material being dry, the flames made great headway. The factory has been in operation for years, the company being originally organized by the Twentieth Century Housebuilders. Reorganization took place a year ago when the name, "Mill Cut Homes & Lumber Co." was adopted. The loss is estimated at about $15,000, and partly covered by insurance.

Meeting the growing demand for service by water from the Pacific Coast to Eastern Canada, the C.G.M.M. has announced that a number of its steamers will be placed on a B. C.-Montreal direct service, via the Panama Canal, beginning with the sailing some time ago of the SS. Canadian Carrier from St. John. Regular sailings from Montreal will follow the opening of the St. Lawrence, and sailings from Vancouver will also be arranged. Already there are numerous applications for lumber cargo space in the first vessel to sail from the Pacific Coast. There will be a saving of at least $6 per thousand as compared with rail rates on lumber.

The Victoria Mills, which are owned and operated by the Fraser Companies, Limited, at Fredericton, N.B., have commenced sawing operations for the season. This means a complete collapse of the strike declared at the plant when the management announced a return to the 10-hour day schedule. The planing mill has been operating for some time and loading crews have been working on a 10-hour day. Stanley Douglass, Limited, have started running their mill at Devon on a 10-hour basis and the Gunter mill at North Devon is also running. It is also announced that a crew will get the St. John River Log Driving Company's booms at Douglass ready for the season's operation. The men will work on a ten-hour basis and the wages will be about $3.00 a day.

Capt. Robert Dollar, head of the Dollar shipping and lumber interests, was in Vancouver recently and stated that low freight to the Orient was bringing the lumber business back to normal and the Dollar mills would ship all their output, between 30,000,000 and 40,000,000 feet, to China this year. Capt. Dollar stated that before the war his company were shipping over 100,000,000 feet of lumber yearly to China, but when the war broke out and freight rates increased, a slump came and now recovery in trade is gradual. Captain Dollar is now the head of a fleet of twenty-four sailing ships and steamers. The services circle the globe, and pay especial attention to Oriental business. There are also steamboat lines far up the Yangtse River, and it is possible that another steamer may be bought this spring to add to the fleet of Dollar vessels that ply the lower river from Hankow to the mouth. In speaking of the bandits that infest the districts through which the upper river steamers pass, Captain Dollar said he had been on board several times when the vessels were attacked, but all he had to do to produce quiet was to step to the side of the vessel, take off his hat and let them see who he was.

Major R. E. Fischer of Cairo, Egypt, was in British Columbia recently in connection with the big order for ties, which was placed with the British Columbia mills through the Canada Overseas Trading Co. Major Fischer is a prominent business man of Egypt and is associated with much of the development of that country. He is expected to pay a visit to Toronto, Ottawa and Montreal soon. In an interview the Major said:—"For a new country it seems to me that your lumber people are unduly conservative. We have had great difficulty in placing business with them. Russia and Roumania are both extensive timber-growing countries, and are much better placed as regards distance. We are anxious to trade within the Empire, but B. C. must realize that there is competition from other sources," Mr. Fischer said. "With us it is a question of business first and sentiment afterwards. Russia and Roumania are both in dire need of foreign currency and will meet any of our conditions to get business, and those countries are rapidly becoming sufficiently stable for us to trade with them. It is all a question of satisfaction and price with us, and if the timber growing countries closer to Egypt are prepared to give us better service than we can get here the business will go to them." he continued. From what he has seen of the ties which are being cut in B. C. by the Associated Timber Exporters, Mr. Fischer is well satisfied with the quality. The railways of Egypt do not use creosoted ties, but green ones. There are no white ants in the country to attack the ties.

Install a "By-Pass" Exhauster
in your Saw Mill, Planing Mill or Plant
Our "By-Pass" Exhaust systems save your power and give better service. They handle green sawdust or wet, stringy material that usually clogs up an ordinary Blower system. The fan wheel is not overhung. No heating, clogging, or shaking. Three bearings.
Write for information.
We manufacture and install systems complete.

FIRE BRICK
AND CLAY

We make several brands of fire brick made by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best adapted fire brick for your boilers, dutch ovens, refuse burners, kilns, etc.

We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse, which enables us to ship at once.

We manufacture the following well-known brands:

"Elkco Special," "Elk Steel," "St. Marys," "Keystone" and "M.D. Elk"

The Carriage You Are Looking For

Our No. 1 Size

CARRIAGE—Has three head blocks, as shown in cut, usually set 9 and 6 feet apart, will be placed any distance apart to suit purchaser. Knees open 38 in. from saw, and is fitted with Knight or Peel dogs, as desired. Taper movement on each knee. 1 15-16 in. steel set bar with steel pinions and coil spring receder, and friction lever brake for stopping knees where required. Timbers are 5 x 6 in., or heavier if desired, well bolted and braced. Diameter of truck wheel, 12 in. Axles 1¾ in. diameter, and extend clear across carriage, are furnished with self-oiling bearings. Front block is fitted with timber rule, placed as desired; 54 feet of V and flat track furnished with each carriage.

SET WORKS—As shown in cut, is made up of ratchet wheel 12 in. diameter, 4 in. face, with set lever carrying 7 steel pawls of varying lengths; also, same number of check pawls set in quadrant. Both sets of pawls are disengaged from either side of carriage when required to recede knees. This is a positive set, without lost motion.

FEED WORKS—As shown in cut, consists of 16 x 12 in. drum, with spur gear keyed to shaft. Pinion or friction shaft in saw frame engages with this gear. Cable takes two or three turns around drum, and is passed around end sheaves and attached to carriage. We also furnish 26 in. drum with internal gear in place of 16 in. drum when desired.

UNUSUAL!

A 72 inch 15 ply Belt, 100 feet long is unusual. Nevertheless such belts are required occasionally and as a rule the requisition specifies **"Condor,"** the Original, Red, Friction Surface Belt. Let our representative tell you **Why.**

Condor BELT

Condor Belt is used on Main Drives in Saw and Planing Mills. It is also used on Edger Drives, Circular Saw and Band Saw Drives, and all other Saw and Planing Mill Drives.

We have an interesting Handbook containing useful information about belts, that we will mail to you upon request.

The General Supply Company of Canada, Limited

LARGE STOCKS CARRIED

Rubber Goods FOR LUMBERMEN

Belting Our long experience in the making of Rubber Belts enables us to specialize on this line. "P.M.S.," "Special Drive" and "Lion" are our leading brands for power transmission.

Packings "Redstone" High Pressure Sheet Packing has proved by test that it will outlast any other similar packing on the market. We make Spiral and Ring Packings, etc., that are equally reliable.

Hose for Steam, Water, etc., in various grades, made especially to give satisfactory and economical service under different conditions.

Fire Hose One or more of our twenty brands of Fire Hose will be found, not only in the best equipped Factories, Mills, etc., but in almost every Fire Department in the Dominion.

This is the "Marsh" Gasoline Hoist referred to in the letter.

Gasoline Power is Proven

For Use in the Woods

The "MARSH" Gasoline Hoist does the work

Read the following testimonial:—

"Regarding the 6 H.P. Single Drum "MARSH" Gasoline Hoist that I purchased from you last August I take pleasure in advising you that this machine met the requirements perfectly and would say that it is giving entire satisfaction in every respect."

(Name given on request.)

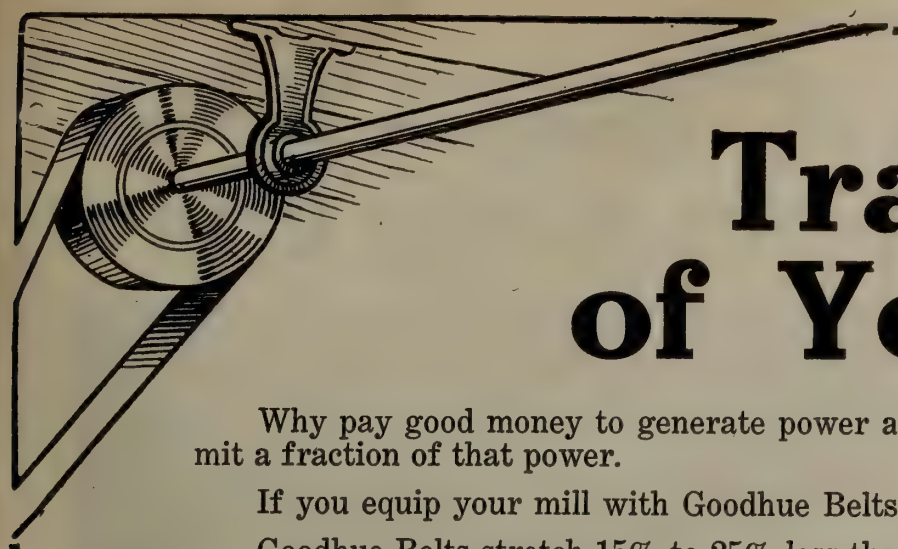
Do you want to reduce your Skidding and Loading Costs and Increase your Daily Output? A "Marsh" Hoist will do it for you as it has for others.

Write for booklet and full information.

Marsh Engineering Works, Limited ***ESTABLISHED 1846*** **Belleville, Ontario**

Sales Agents: MUSSENS LIMITED, Montreal, Toronto, Winnipeg, Vancouver.

6 H.P. Single Drum "Marsh" Gasoline Hoist at work in woods



Transmit 100% of Your Power

Why pay good money to generate power and then employ a poor belt that will only transmit a fraction of that power.

If you equip your mill with Goodhue Belts you can transmit 100% of the power generated.

Goodhue Belts stretch 15% to 25% less than other belts and have just the right amount of "cling" on the pulley.

Write us for particulars and prices

YOU CAN DO IT WITH A— GOODHUE BELT

A Camp is Known By the Food it Serves

Gunns

Good grub and lots of it, in the lumber camp means a full bunk-house every night. Hunger is the best sauce, and there is no need of frills in the cook-house. Real food for the husky lumberman—food such as GUNNS' is what is needed.

Beef, Veal, Mutton
Barrelled Beef,
Barrelled Pork,
Dry Salt Meats,
Butter, Cheese,
Oleomargarine, Lard,
Eggs, Poultry, Headcheese,
Canned Meats, Mincemeat,
Pork and Beans
Beans, Sausages..

Keep up your stock of provisions. The efficiency of your camp depends upon it. Let us quote on your supplies.

Gunns Limited, West Toronto

A NEW ROSSER

We are the Canadian Manufacturers of

The "J. & C." Portable Rosser

(Pat. U. S. A. and Can.)

A REALLY PORTABLE ROSSER

Weighing 1800 lbs. and occupying space 8' x 9' which rosses wood 2 ft. or 4 ft. long, with a minimum of waste and low cost of upkeep.

Actual Test Has Shown Only 8% Net Loss.

And Capacity 2 to 3 Cords per Hour.

Enquiries solicited.

"The greatest indictment which can be brought against industry in the United States is the charge of waste."

—Quotation from Babson's Report

Can you answer this charge and clear yourself in the tribunal of Competition?
The indictment is particularly true in the woodworking industry and can be laid principally to inefficient kilns.
Analyze the results of this department in your own business and determine what your answer will be.

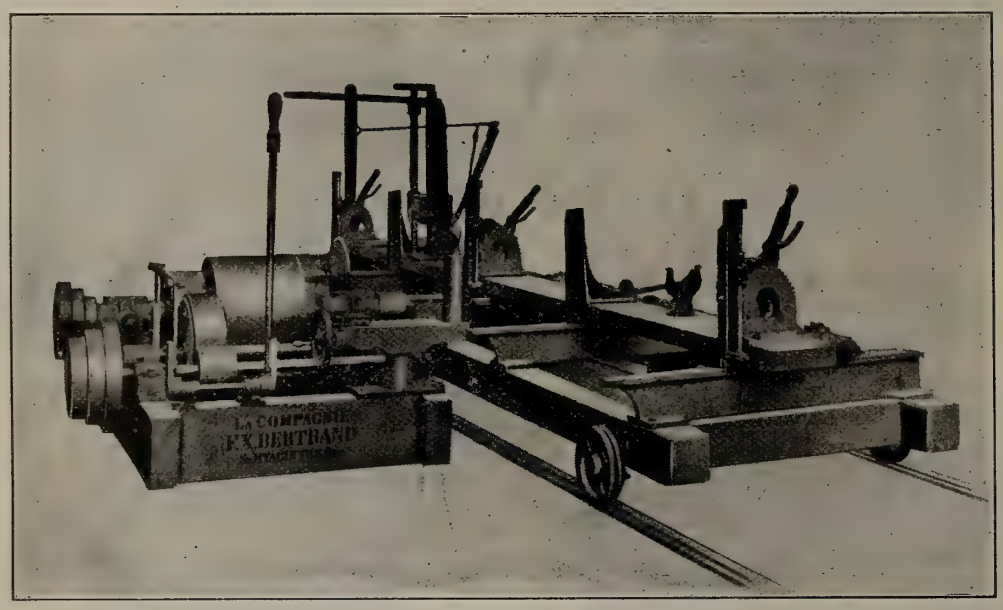
BERTRAND MACHINERY



IDLE machinery cuts in on the millman's profits. Idle machinery caused by faulty construction is something that every millman should avoid—can avoid by using only machinery that is dependable — BERTRAND MACHINERY.

We do not mean that a BERTRAND machine never suffers a breakdown, but we do claim that it will give a service, day in and day out that is equalled by few others made here or in any other country. And the fact that it is made right here in Canada is worth your consideration, too.

Kitchen's Stand Toughest Roughest Usage

Handling rough unplaned lumber is hard on clothes—the edges are like saws. Why put up with poor wearing garments that either keep you busy mending or make you look untidy. Wear

KITCHEN'S
"Railroad Signal"
OVERALLS

They are neatly fashioned to give long wear and fit; seams and buttons stand the rubs of hard service; the points that catch the rubs are reinforced; Kitchen's are roomy and comfortable. They are the biggest value ever offered because they outwear any other garment. Insist on Kitchen's if it's service you want.

ELEVATION WITH FRONT REMOVED

Contractors for **Boiler Settings and Power Plant Brick Work**

We design and construct every description of Furnace Linings, Door Arches and Jambs, and Tongued and Grooved Dutch Oven Blocks. For Furnace Arches of all kinds we supply radial blocks in six different sizes. They make an arch 9 inches thick, and as they are in lengths of 12 and 16 inches, any desired length can be obtained.

Our linings are highly refractory, strongly immune of the destructive influences of sudden thermal changes, and will withstand much compression under high temperatures—three most important qualities.

The Fire Box Blocks are tongued and grooved, and are made in sizes 16 and 18 inches high, and 4½, 8, and 9 inches thick.

All work is under the supervision of Mr. John W. Gates, who has had 35 years 'experience in the designing and installation of Boiler Settings.

Tudhope-Anderson Detachable Lumber Trucks

Unequalled stand-up-ability on tough, rough and soft road-beds are the tests that explain the widespread popularity of these sturdy trucks among lumbermen. Cut shows Front Hauling Gear No. 41 coupled to Hind Gear No. 42. One or more Hind Gears may be attached or detached with ease.

Look at the wide tire steel wheels. They mean easy hauling. We guarantee them. Spokes may be renewed in case of accident—not so with others. Axles are high quality square steel ensuring many years' service. Wood parts are best oak, air-seasoned and kiln-dried. All parts well ironed and braced.

Built to the following specifications:—

No. of Truck	Size of Steel Axle	Tire Inches	Wheels Inches	Frame Length	width
41 Front Gear	1¼" square	4 x ½	26	....	....
42 Hind Gear	1¼" square	4 x ½	42	5 feet	40 inches

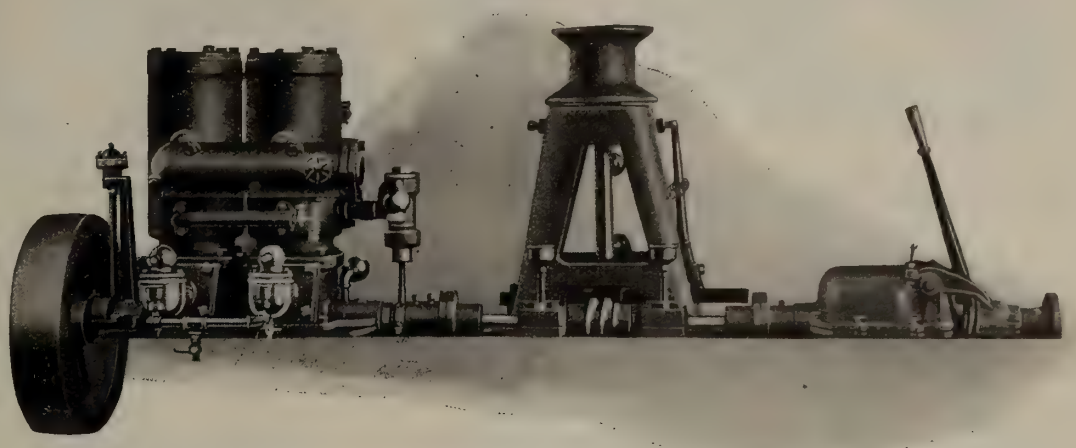
Adams Gasoline Alligator Pointers

Lumbermen find it quicker and easier to work with an Adams Pointer. It is a powerful and efficient gasoline boat that has given satisfaction to the lumber industry throughout the Dominion.

Adams Pointers are made by expert workmen at Penetang. They are easier and safer to use than alligators and tugs. They have a strong, well built, easy running engine and a powerful reverse gear and towing winch that render them equal to the heaviest work, and can be handled by one man.

An Adams Pointer should be included in your equipment. Send for further particulars and blue prints, which will give you full details.



Above cut shows machinery that is installed in a 26'-6" x 6' Special Lumberman's Pointer.

Adams Engine Co., Penetang, Ont.

J. T. PAYETTE, Proprietor

The Machine That Made a Record in a Recent Lath Cutting, 10 Hour Test

Four Hundred Sawmills in the Dominion are to-day using this machine.

It has all the latest improvements and for quick, clean, heavy duty work has no equal.

The Payette No. 1 Bolter and No. 2 Lath Mill will cut, count, tie and pile 128,350 laths in a period of ten hours. The above consisted of 4 foot laths, 1½ by ⅜ inches, and constitutes a record in rapid lath cutting.

If you are not using a Payette No. 1 Bolter you should be.

Shall we send you full particulars and prices?

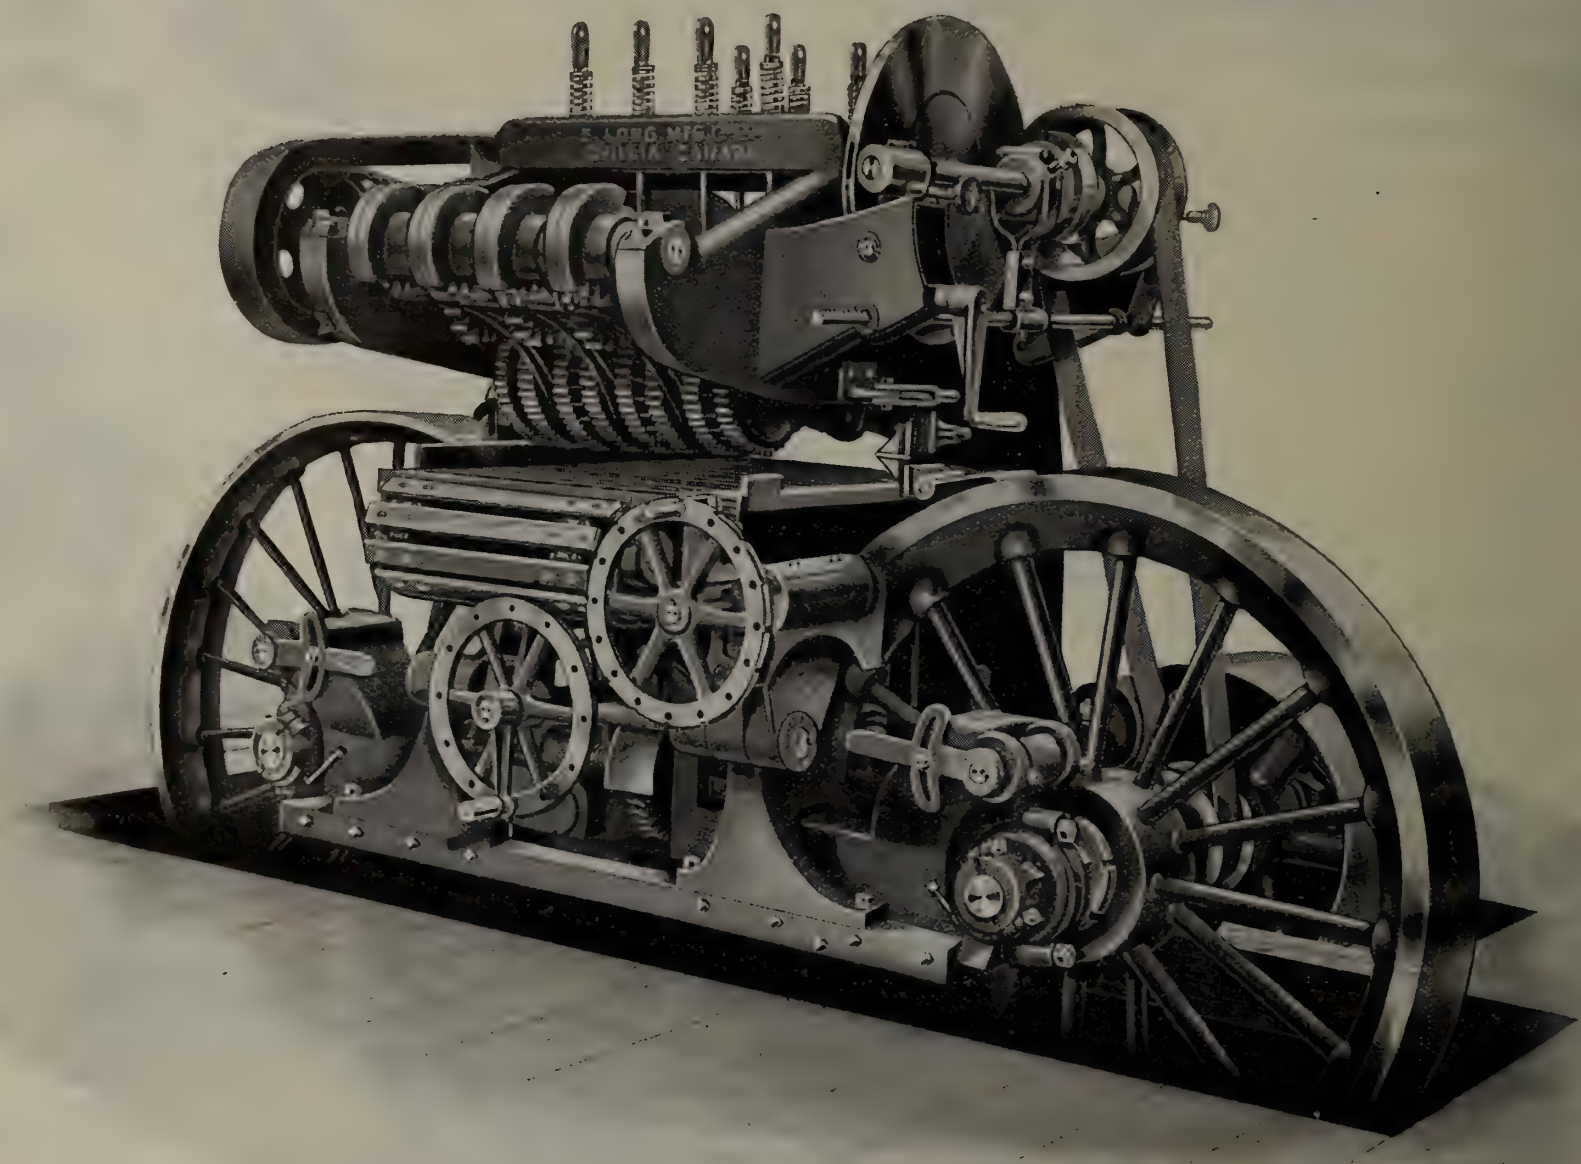
DO IT THE RESAW WAY



To make more lumber and less sawdust is a logical economy the future will demand.

This Resaw gives more than this: ACCURATE lumber at a LOW LABOR COST.

A VERTICAL RE-SAW

For years we have recognized the faults of the horizontal re-saw, such as the excessive space taken up in the mill—the necessity of raising or lowering the bed, or the saw blade itself in order to change the thickness of cut—the difficulty of separating the slab from the lumber at the rear of the machine, and the advisability of having every slab inspected by the sawyer before being passed through the machine. But, until recently we have never been able to perfect a vertical re-saw which would meet in every way the high standard of excellence which every machine bearing the name of WATEROUS must possess .

We are at last, however, able to offer to the Sawmill Men of Canada, a machine that not only overcomes the above faults, but one which combines all the advantages of the horizontal and vertical re-saws.

Here is a machine which will positively cut straight slabs and half logs **regardless of irregularities in material.**

The bed consists of four fluted live rolls which are adjustable and which take the place of the planed table.

There are two press rolls. The first swings on a vertical shaft in a frame which presses firmly against the feed rolls, bent to the saw in a steam actuated saw tooth roll. These two rolls are so arranged as to automatically take care of all variations in the size and shape of the slabs.

The swinging arm roller mounts any slabs immediately and the pressure of the oscillating cylinder aligns the slabs against the first two feed rolls, swinging the tail of the slab immediately in the line of the saw cut, this taking place before the saw enters the cut.

This arrangement prevents the usual thick or thin or scooped ends that are so common in all re-saws carrying the single press rolls and feed rolls.

Waterous

HEAD OFFICE: OTTAWA, ONT.

A Fast Feed Matcher Head scientifically designed for matching from 200 to 800 lineal feet per minute.

The SHIMER Fast Feed Expansion Matcher Head

With 12 High Speed Bits

The head is built heavy where the strain is and is devoid of all angles or openings, which lessen the wind resistance and cannot block with shavings.
These advantages, combined with the Shimer expansion feature, make a combination that is hard to equal.
The straight knives are long, assuring length of service, while the circular knives can be set back, and the straight knives jointed; in this manner the whole width of the straight knives can be jointed at the one setting.
The circular cutter is then brought to its proper location.

The Cheapest and Best Head on the Market. WRITE FOR PRICES

HARDWOOD LUMBER

THIRTEEN BAND MILLS
SIX PLANING MILLS
FIFTEEN FLOORING UNITS
NINE DIMENSION MILLS

ANNUAL CAPACITY:
130,000,000 feet.

On this page in a preceding issue, we declared the truism that

The Way to Resume is to Resume.

That resumption of activities is under way in gratifying fashion is evidenced by orders for certain of our production beyond our capacity to fill.

Demand for our HARDWOOD FLOORING has increased to such extent that we have been compelled to decline to accept many orders.

True this almost unprecedented demand is accounted for largely by the superiority of our flooring; but it is fair to assume that it is in part accounted for by greater activity in building construction.

"Ritter" Brand Flooring should be demanded where the "last word" in perfect flooring is required.

Our flooring because of its superior intrinsic quality and the excellence of our manufacture is the standard for comparison.

Our service is efficient and our desire always to please.

W. M. Ritter Lumber Company, Columbus, Ohio

Head Office: 68 St. Peter Street, QUEBEC, P.Q.

Hardwood

—when you need it

—as quick as you need it

FROM our Logansport, Indiana, Service Yard (near South Bend) we are able to make hardwood delivery in half the time usually required because we have exceptional car facilities.

Our capacity at this yard is 5,000,000 feet—consisting chiefly of Ash, Elm, Maple, Oak, Poplar and Hickory. Delivery of any of these items—all of the highest quality— can be made just as you want them.

And by that we mean that we will fill your order to satisfy you absolutely—you to be the judge of satisfaction.

For Beauty and Serviceability

The superiority of BRITISH COLUMBIA WESTERN HEMLOCK over many other woods is surely beginning to make itself apparent.

For years its many merits were overlooked because its name was confused with that of a less valuable timber. Now all that is changing and BRITISH COLUMBIA HEMLOCK is gaining its righteous place as one of the lumber world's greatest and most important assets.

Its light weight, great strength, ease of working, beautiful grain and enduring qualities are manifesting themselves now from one end of the continent to the other. It is destined to replace many of the woods that are rapidly passing out.

There's plenty of it to last for years and years. The importance of that factor is obvious to all lumbermen.

We'll send BRITISH COLUMBIA WESTERN HEMLOCK in mixed carloads with our other BIG CHIEF Brand Specialties —British Columbia Red Cedar Shingles, and Cedar and Fir lumber in all sizes known to high-class manufacture.

BUY BRITISH COLUMBIA Red Cedar Shingles

There is a sentiment connected with Red Cedar Shingles which is often overlooked in the every day matter of fact business transactions. They are a nature product with centuries of age behind them. On the practical side there are many outstanding features and selling points connected with Red Cedar Shingles that are also often overlooked.

It is the intention in this column to monthly present some of the outstanding features connected with British Columbia Red Cedar Shingles. With a view to placing prominently before retail lumbermen some of these talking points which will enable them to successfully sell 40 year roofs there are many outstanding examples in every district on the continent of shingle roofs which still afford perfect roof protection after 25, 30 and even 40 years, in many cases without repair.

A few years ago it was the endeavor of shingle manufacturers to secure quantity production. This resulted in an out-turn of a low grade shingle which did not possess the longlife necessary to a proper roof. This idea has been changed and the present endeavor is to better the grade and quality of shingle manufacturing. The present edge grain, thick shingle when properly laid with proper weather exposure and zinc-coated nails enables the retail lumberman or building expert to guarantee to his customers roofing protection for many years more than any other manufactured roofing covering.

"What are you doing to meet the situation?"

WITH building and construction work now in full swing, plenty of business is in store for the merchant who is ready to handle it. Right in your own district there is building of all kinds in progress. As the local merchant, you should be the one to supply the building material. To do so, however, your yard will have to be right up to the mark at all times. It isn't hard if you will let GRIER help you.

A trial order—say a mixed carload—is the best way to be convinced.

Gentlemen:

We beg to acknowledge receipt of your cheque covering your share of the loss on our plant destroyed by fire on the 5th of December last.

We wish to express our sincere thanks and deep appreciation for the prompt and satisfactory way in which you have settled our loss. The fact that you had sixty days to settle the matter, and that your cheque was sent barely three weeks after our loss, has been noted and very much appreciated by the Bank of Montreal and ourselves.

Hoping for better luck for both of us in the future and the continuation of very agreeable business relations, as in the past, we remain,

Yours very truly,

Performing An Imperative Service

In no phase of our business is care more thoughtfully exercised than in the selection and training of men for their places in this organization.

The importance of this will be recognized by those who realize the value of fire prevention work.

Our insurance policy is not only a guarantee of prompt payment of fire loss, but it also carries with it a service that includes a regular fire prevention inspection on your property.

A thorough fire prevention inspection may save your property from destruction, and it will also assist a great deal in accumulating larger savings which will result in better insurance for less money.

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, $3.00 per year, in advance; other foreign countries embraced in the General Postal Union, $4.00.

Single copies, 20 cents.

"The Canada Lumberman" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Vol. 41 Toronto, June 1, 1921 No. 11

Rising Costs and Diminishing Prices

In the last edition of the "Canada Lumberman" two instructive addresses were presented, one by a leading retailer of Detroit and another by a representative manufacturer of Sarnia. The latter gave figures to show how the cost of producing lumber had grown rapidly during the past four or five years, and it is only now that the manufacturer is beginning to realize a reduction in costs which during the year 1920 reached their apex.

The rate of wages paid labor and the schedule of outlays for supplies are decreasing but it is a long time before the lumberman can cash in on waning expenses. In other industries when costs of raw material go down, the product being usually the output of only a few days' or weeks' work at the most, can be lessened in the figure at which it is sold to the public. The producer thus quickly reaps the benefits of any decreases.

With the lumber manufacturer, however, as has been pointed out in these columns from time to time, (and this is a matter to which the retail dealers might well give serious thought and attention), it takes a long time to reap advantages of any economic readjustment. The lumber operator has to buy supplies many weeks in advance, and, by the very nature of his vocation has to gamble with the future. The speculative character of his calling requires this. The logs taken out last winter, will, in many cases, not reach the retail yards in the shape of dry lumber until 1922, so it is evident that the operator has to look ahead a mighty long way.

In this issue of the "Canada Lumberman" there is presented on other pages some first-hand facts from lumber manufacturers regarding costs of doing business in 1913 and 1920 which should prove enlightening and interesting to all concerned in the production, sale or distribution of forest products.

In an address to retailers recently, a Detroit merchant pointed out that he, too, had to take a loss of several dollars a thousand. A small volume of trade, such as has been experienced during the past few months, makes the cost per thousand of handling lumber much more than when a heavy volume is done. This is due to overhead expenses which cannot be cut down materially if an efficient organization is to be held together. Sales, yard and office staffs, who work in unity and harmony and with the highest interest of the business at heart, cannot be built up in a day. The only permanent remedy for reducing overhead charges is increased turn-over and augmented activity in building.

The main thing to consider is percentage of cost to sales, and it is difficult to make the percentage low during a period of depression. Doing a lesser volume at an increased rate of expense means a less margin of profit. It is interesting to note that in a tabulation of several cities, it was shown that the cost of handling lumber per thousand ran from $12.75 up to $19.50, and the percentage of the costs of doing business ranged from 10% to 31%.

A lower turn-over results in greater cost of operation, for the simple reason that there are certain fixed charges which cannot be altered. A certain volume of business up to a normal amount or mark tends to reduce the overhead and make things move along easily and smoothly. When the amount aimed at is not reached then the expense barometer mounts rapidly and unless one preserves a cool head, a stout heart and a firm step, snags are likely to be encountered, or disaster loom up at some sudden bend in the road.

Destructive Agencies in Canadian Timber

Various tree diseases are responsible annually for enormous losses in the forests from which our supplies of timber are taken. This work of destruction goes on silently but surely and does not attract the attention that wasteful methods of lumbering or forest fires do, says A. W. McCallum, plant pathologist of Ottawa.

Dead and dying trees scattered through the forest have come to be taken as a matter of course, but, if they could all be brought together, their number would be surprising even to those most familiar with forest conditions. It is very probable that the yearly loss due to fungi, insects and fires combined constitutes a much greater amount than that utilized for commercial purposes and that the loss occasioned by the first two exceeds that caused by the latter.

The most important group of fungi which cause disease in living trees is that known as the wood-destroying fungi. These forms attack the roots and trunks of trees, bringing about changes in the wood which either partially or completely destroy it. They are parasites, and their food consists of the chemical constituents of the wood which they are enabled to utilize by means of dissolving substances or enzymes. These are the so-called "bracket fungi" with which everyone is more or less familiar. The sporophore or reproductive body of these fungi is formed during the summer. It appears on the trunk of its host as a bracket of hard, woody substance so closely attached to the trees as to appear to form part of it. Some of these sporophores last for but a single season, when they are replaced by fresh bodies, while others are perennial, growing for many years. In either case the spores are discharged into the air in immense numbers through fine tubes on the lower surface of the fruiting body and are carried by the wind for long distances. Of these many spores, a small number lodge in wounds on the trunks or exposed roots of trees and here, if condtions are favorable, they germinate, the resulting mycelium growing into the interior of the trees, decaying the wood as it advances. After decay has progressed sufficiently to allow the fungus to accumulate a store of food, a further body is produced, which usually appears at the point of original infection. During this period, from infection to sporophore production, which usually takes a number of years, there are no external symptoms of decay.

These fungi are rarely directly responsible for the death of trees, but these hosts become so weakened as a result of their attacks that they fall easy prey to insects or other fungus diseases. Also, when once a tree becomes decayed, it is very liable to windthrow. When such a tree is cut in logging operations, if it is taken at all, a large part of the most valuable portion of it must be culled.

There is another group of fungi which are frequently directly responsible for the death of trees. These are forms which inhabit the bark and cambium, causing cankers. The two most important diseases of this class are the chestnut blight and the larch canker. The former was brought into the United States from China on

nursery stock about 1904 and since then has spread rapidly throughout the Eastern States, destroying every chestnut tree within its range. It has proved to be the most destructive and rapidly spreading tree disease yet known. So far as is known, it is not present in Canada and can never become of great economic importance here since the chestnut grows naturally only in a limited portion of southern Ontario. Larch canker is a very serious disease in Europe, but as yet it is not known to occur in this country.

Finally, there are the rusts which attack trees. These are similar in nature to the well-known wheat rust and the most important is the white pine blister rust. This is a European disease, which was brought to this country on nursery stock about 1906. In Europe it has proved very destructive to the native white pine, but whether it will act similarly here remains to be seen. Certainly, the extremely pessimistic views which have been expressed about it here, which have resulted in the curtailment of the planting of white pine nursery stock, seem scarcely to be justified.

An Aggressive Policy on Forest Protection

It is announced that the forest fires which have been raging in various parts of Ontario have been subdued and that all danger for the present is practically over. The past spring has been an unusually dry one in the north, although rains fell in generous quantities in other portions of the province. The Ontario clay belt suffered until the middle of May from what almost might be described as a vernal drought. There was imminent danger at various points of not only valuable timber been swept away, but heavy losses in pulpwood, lumber and even sawmills. A representative of the "Canada Lumberman," who took a trip over the Canadian Government lines recently, a distance of some 200 miles west of Sudbury, was amazed at the number of fires which could be seen in all directions and particularly at night when the lurid flames lit up the heavens. Once more a kind of Providence has sent a timely downpour to help the Department of Lands and Forests out of a serious situation.

It is announced that the Ontario Government is adopting a more aggressive forest policy, particularly in the matter of safe-guarding its timber wealth from the ravages of the fire fiend. Such a step has not been taken any too soon as it is a well known fact that the system has needed strengthening and improving for many years. Ontario has been lagging behind other provinces in the matter of a far-seeing and efficient fire protection and reforestation programme. New Brunswick, Quebec and British Columbia have led the "banner province" both in enterprise and initiative in these matters. It is, however, gratifying to learn that Ontario has at last come to a realization of what should be done in this direction. It is stated that the number of fire rangers will be increased to over 1000, several new look-out towers built, telephone lines extended and other effective means taken to locate forest fires.

It is only those living in the northern part of the province and who have seen and experienced the danger, terror and destruction of the arch enemy of the forest, who know the urgent necessity and clamorous call for a more rigid inspection and protective system. Persons living in the southern portion of Ontario, whch is practically immune from any such disaster and holocausts as have visited the north from time to time, are, possibly, indifferent regarding the necessity of conserving and perpetuating the timber resources of the hinterland. Until these complacent and self-satisfied persons waken up and take a keen, alert interest in forestry and other matters, it is believed that Ontario will not go as far as it should in the way of an aggressive policy. The rising tide of sentiment and conviction should sweep aside all barriers in safeguarding our timber wealth, not only for the peace and prosperity of the present generation but of those in the years to come.

The Department of Trade and Commerce, Ottawa, has been informed that practical tests of British Columbia timbers—Douglas fir, B.C. spruce and Western hemlock—by H. M. Board of Works, London, on behalf of the Advisory Committee on Timbers of the Imperial Institute, have proved quite satisfactory and that as a result these woods will be included in the official specifications of that department as alternatives to European joinery timbers.

Probable Strike of the Printing Trades

Readers of this publication should know the facts in connection with the strike of the allied printing trades which will take place in Toronto June 1st unless a settlement is reached within the next few days. The situation is almost without precedent, the Unions having demanded what is equivalent to an increase of more than 36 per cent.

A year ago (although the wages agreement at that time had over a year to run) the Toronto publishers and master printers voluntarily gave their employees a 10 per cent. advance in wages, making the minimum wage $35.20 for a 48-hour week. This was given in recognition of the fact that living costs had advanced. Notwithstanding that the cost of living, according to statistics, has declined from 15 to 20 per cent. since March, 1920, the printers have now asked for a 44-hour week and a wage of $44.00 ($1.00 an hour).

The orders for a 44-hour week were issued from the International Headquarters of the Typographical Union at Indianapolis, U.S.A. It has been said that the local union representatives have no power even to negotiate on the question of hours. It is an international movement for less production per day, which, in the light of existing world-wide conditions, is economically wrong.

The demand for an increased hour-wage of 36 per cent. has brought forth condemnation from all quarters. It is impossible to advance one sound argument to justify the increase, and unless the better type of printing craftsmen are able to secure control of the situation, the employers will be morally compelled to face a strike June 1st.

May we say to our readers that we are counting on your support and co-operation? You do not know how soon you may have the same problem at your own door. It is the intention of the directors of the Hugh C. MacLean Publications to put forth every effort to publish as usual. How far we shall succeed remains to be seen. If there is any break in publication, or any interruption in the service, it will be because we are fighting what are believed to be unreasonable demands.

Some Editorial Short Lengths

Sixty miles of Ontario provincial highways have already this spring been bordered with trees, or, as the enthusiast might call it, arboreal adornment. Most of them are maples and elms obtained from the respective neighborhoods in which such worthy work has been carried on. If the planting is continued each season, the provincial highways will be much improved because the trees are not only ornamental but act as wind-breaks, sunshades and conservers of moisture. The planting operation by the Ontario Provincial Highway Department began last October on the Kingston Road between Toronto and Port Hope and ultimately the avenue of trees is expected to reach the Quebec border. From Hamilton east to Queenston also planting has been done, and as the various sections are finished, will be made complete. Much practical benefit comes from this striving for landscape beauty, and Ontario with its tree-bordered rural thoroughfares should prove very attractive to motorists and others. Good roads are not only a delight to tourists but beautiful verdure along the routes adds immensely to the pleasure and satisfaction of any automobile outing.

"Canada cannot afford forest fires. Make yourself a 'deputy fire ranger' whether in the woods this year for business or for pleasure and help to check the fire waste. Three-quarters of a billion dollars' timber loss since Confederation!" So runs the slogan on a blotter recently issued for general distribution by a leading financial institution. Such publicity is effective and striking at all times of the year, but particularly so during the camping and outing season. More power to such movements and propaganda.

The McDonagh Lumber Co., of Toronto, are new members of the National Hardwood Lumber Association of Chicago. The annual convention of the Association will be held at the Stratford-Bellevue hotel, Philadelphia, on Thursday and Friday, June 9 and 10.

How Manufacturing Costs Have Increased

Steady Advances in All Lines During Past Seven Years—Representative Firms Furnish Comparative Figures Showing Way Expenditures Have Mounted

The manufacturer of lumber, whether hard or softwoods, has been faced with constantly increasing costs for a number of years. The figures have annually been ascending until in 1920 they reached their apex. Advances have been along every line and particularly in the matter of wages and freight while, up to the latter part of 1920, labor grew steadily more independent and inefficient, until it took on the average three men to do the work which two easily performed prior to the war.

In many districts the cost of turning out a thousand feet of manufactured lumber went up from one hundred to two hundred per cent., and even more. It is the general opinion of those most conversant with production, sales and distribution, that, with the exception of the first six months of last year when there was a feverish market and a runaway demand with fictitious, speculative values, that the price obtained for the finished article has not annually kept pace with the enhanced outlay for production.

With a view to furnishing first hand information for the benefit of the trade—facts based on efficient cost systems and not mere hearsay or rumors,—the "Canada Lumberman" has obtained some timely and reliable data from representative manufacturers in divers parts of the Dominion and under various heads of expenditure.

It is manifestly impossible to give a flat cost per thousand feet of production that will apply to every part of Canada, for the simple reason that stumpage is higher in some provinces than in others, logging difficulties are greater and there exists a wide difference in the character and thickness of the bush. Again, there are sorting, rafting, driving and towing conditions to be considered, the distances to be covered, mill facilities, local labor situation, and many other items.

The statements which are appended are furnished with no idea of bolstering up or defending any special unit or interest of the lumber industry but are for the diffusion of timely and useful information, and to correct misapprehensions and unfounded rumors that have prevailed.

The questions submitted cover comparisons of years 1913 and 1920 in regard to logging and sawing operations, per thousand feet of lumber, b. m., under the following heads: 1, stumpage, ground rent and crown dues; 2, logging: from felling the trees to bringing logs to foot of jack ladder; 3, sawing, piling and loading; 4, general advances in freight; 5, overhead costs, distribution, etc.

The Situation in the East

A large manufacturer of spruce in Eastern Quebec writes:—The following will give you part of the information requested. You will note that question one we leave out altogether as cost mentioned in question two includes ground rent and crown dues. Regarding the charge for stumpage; as lands in Quebec are sold on a different basis to other provinces you can hardly figure this in making up a memorandum of this kind. To arrive at a stumpage value you would have to take a property purchased in 1913 as against one purchased in 1920; otherwise, for a statement of this kind, you might use an arbitrary figure of say $4.00 per M. In 1913 the government dues were $1.05 per M ft. Quebec Rule and in 1920 they were $1.60 per M Quebec Rule. Ground rent in 1913 was $4.00 and in 1920 was $6.50.

	1913	1920
2. Logging	$7.50	$15.82
3. Sawing, etc.	2.55	4.22
4. As we sell all our product f.o.b. mills we do not figure on a delivered price		
5. Overhead, etc.	2.58	5.24
	$12.63	$25.28

How Log Costs Have Aviated

A large company operating in New Brunswick manufacturing pine and spruce say:—We enclose you comparative statement covering cost for the last ten years, which should be plain to you. Prior to 1916 we did not keep the yard costs separate from the milling costs, so that we cannot give you the yard and milling costs separate for 1913. We do not just know what you mean by Crown dues as apart from stumpage. Here on the Restigouche there is no private stumpage obtainable and we all use Crown lands, for which we pay an annual rental and a stumpage on the quantity of logs we cut, we holding lands in both New Brunswick and Quebec.

The rates we have been paying are as follows, viz.:—

New Brunswick	1913	1920-21
Spruce and pine, per M S ft.	$1.25	$5.00
Fir, per M S ft.	.80	4.50
Cedar, per M S ft.	1.25	5.00
Crown Land per square mile	8.00	8.00
Quebec—		
Spruce, per M S ft.	1.05	1.60
Pine per M S ft.	2.00	2.60
Fir per M S ft.	1.05	1.60
Cedar	1.05	1.40
Crown land per square mile	5.00	6.50

The only cost of logs we can give you is delivered at the mill, as per statement herewith.

Over the logging season of 1912-13 we were paying $7.00 to $8.00 per M ft.for logs in brows on bank of the river, according to distance from town, while for the winter just past we paid $16.00 to $17.00. Sorting and rafting which cost us 60c in 1913, cost us $2.00 in 1920.

The increase in rail rates has been very high, as they were to

	1913	1920
Montreal	.13	.25½
Toronto	.18	.34
Boston	.18	.35
New York	.21	.40

Memorandum of costs from 1910 to 1920:—

These amounts are included in the gross costs

Year	Logs including Culls	Logs excluding Culls	Sawing & Shipping	Piling & Shipping	Laths	Shingles Wood	Shingles Sawing
1910	10.94	11.64	2.42	These amounts are included in the gross cost.	.60	1.18	
1911	10.73	11.30	3.10		.60	1.11	.69
1912	10.33	10.92	3.31		.65	1.05	.78
1913	12.11	12.94	3.18		.70	1.20	.78
1914	12.04	13.15	3.53		.75	1.25	.76
1915	11.11	12.08	3.32		.75	1.07	.68
1916	11.10	12.00	3.76	.80	.75	1.02	.76
1917	13.56	14.70	4.67	1.10	.95	1.38	.96
1918	18.13	19.93	6.51	1.62	1.56	1.70	1.25
1919	24.52	27.40	7.88	2.20	1.40	2.34	1.42
1920	27.62	31.10	9.87	3.43	2.29	2.72	2.08

Note:—No charges are included in the above costs for:—
Interest,
Depletion of timber lands,
Use of mills, plant or equipment.

Glad to See Question Taken Up

A manufacturing firm in the Georgian Bay district turning out white and Norway pine and hemlock say:—We have pleasure in sending you the following and are glad to see you take up this important matter:

	1913 Per M	1920 Per M
1. Stumpage, Ground Rent, Crown Dues	$4.25	$4.45
2. Logging; from felling trees to bringing logs to foot of jack ladder	8.13	22.40
3. Sawing, piling and loading	4.73	13.55
5. Overhead costs, etc.	3.23	7.53
	$20.54	$47.93

As you know, we are only manufacturers and sell our product at the mills, and are, therefore, not particularly interested in freight charges. In the item of Overhead Costs, distribution does not enter with us, but is made up of management, upkeep, insurance, etc., in connection with both logging and sawing. We would also like to explain that these figures are made up on the total output of the lumber from the log.

The Highest Figure You Know

Another organization turning out white pine in Northern Ontario remarks:—Regarding comparison of costs between 1913 and 1920, in the lumbering and sawmilling industry, we would say that as we were not operating a sawmill in 1913, we are not in a position to give you any information as to sawmill costs for that year. So far as we can remember, the logging cost for 1913 was about $11.00 per M, as compared with $30.00 for 1920. The costs were higher this year than

ever with us, and all other lumbermen we have been talking to tell us the same thing. As for the Stumpage, Ground Rent, Crown Dues, Freight, etc., these will affect us in the same proportion as they have other lumbermen in the province. While this information is not as complete as you requested, we trust it will enable you to make the comparisons desired.

Getting Dearer All the While

In western Quebec a firm specializing principally in hardwoods, along with hemlock and spruce, sum up the matter of costs as follows:—It would be hard for us to give you a comparison for the year 1913, as our plant was destroyed by fire that year and we only ran a few months. However, we are taking the years 1914 and 1920, and giving you the average cost of each department, the same as we figure it for ourselves. This report does not include stumpage, as most of the timber we saw out is cut on our own lands, and the stumpage charged has been fixed some years ago, and has not been changed.

	1913-14	1919-20
Cost of logging	6.586	16.697
Cost of delivery to mill	2.039	5.237
Cost of sawing and supplies	1.753	3.955
Cost of piling and grading	.449	.977
Administration and general exp.	1.142	3.245
Insurance and taxes	.555	1.116
	$12.524	$31.227

Another Statement of Interest

An Ottawa Valley firm which specializes in pine observes:—We herewith submit comparisons between the years 1913 and 1920 as to the cost of our logging and sawing operations as follows:—

	1913 Per M	1920 Per M
1. Stumpage	.08	.13
Ground rent		
Crown dues	1.90	2.27
2. Logging; from felling trees to bringing logs to foot of jack ladder	9.87	26.70
3. Sawing, piling and loading	5.34	10.66
	1913 Rate	1920 Rate
4. Freight	4½c	13½c

With the exception of the freight rate we have given you the figures at so much per thousand, as you request.

Some More Striking Figures

From one well known Ontario company operating in white and red pine the following has been received:—We have much pleasure in complying with your inquiry in regard to the comparative costs of producing lumber in the years 1913 and 1920. So far as the general advances in freight rates are concerned we cannot give you definite figures, but we would believe they have doubled within the last seven years. In reference to overhead costs and distribution we have not taken into consideration commissions on sales and, if these were included, the figure appended would have to be increased from two to three dollars per thousand to cover this item.

	1913 Per M	1920 Per M
1. Stumpage		
Ground rent		
Crown Dues	$3.75	$5.50
2. Logging; from felling trees to bringing logs to foot of jack-ladder	11.50	34.00
3. Sawing, piling and loading	5.50	10.75
4. General advances in freight	Double	
5. Overhead costs,distribution,etc.	3.00	4.00
Total	$23.75	$54.25

Another Evidence of Advances

A leading concern in the Ottawa Valley manufacturing spruce say:—We have pleasure in enclosing the following with respect to comparative costs of production. We are unable to give you any information regarding general advances in freight, as you are no doubt as well posted on the increases which have taken place in the last few years as we are ourselves. The figures we submit to you show that the costs have more than doubled.

	1913 Per M	1920 Per M
1. Stumpage		
Ground rent		
Crown dues	$7.00	$12.00
2. Logging; from felling trees to bringing logs to foot of jack-ladder	14.25	30.00
3. Sawing, piling and loading	4.16	8.97
4. General advances in freight	Sell all f.o.b. cars	
5. Overhead costs, distribution, etc.	2.50	6.50
Total	$27.91	$57.47

Log Cost and Lumber Cost Summarized

Another well-established operating company in Northern Ontario have also gone into the matter of costs quite extensively and say:—"You will find attached hereto a statement showing what the cost of producing lumber was in 1913 and in 1920 on the thousand feet, board measure, basis. We wish to call your attention to some of the figures in the statement. You will notice that the total log cost is summarized and also the lumber cost. We did this because you may be unable to reconcile the two costs. You will also observe that we have totalled the lumber costs from the jack ladder to the car and have put down the total cost of the lumber scale which also gives you that comparison.

	1913 Per M	1920 Per M	
1. Stumpage	4.88	8.88	Log Scale
Ground rent, Inc.			
Crown dues	2.00	2.50	
2. Logging; from felling trees to bringing logs to foot of jack-ladder	11.11	21.88	
	17.99	33.26	
3. Sawing, piling and loading	3.44	9.39	Lumber Scale
4. General advances in freight	2.24	4.31	
5. Overhead costs, distribution, etc.	1.76	4.94	
Total	7.44	18.64	
Total based on lumber scale	$17.00	$33.00	

Lumber Contracts Awarded at St. John

The city council of St. John, N.B., recently awarded contracts for the supply of material for the harbor department as follows:—

J. A. Gregory, Protection St. W. E.—153,000 f.b.m. merchantable spruce, at $28.00 per M. 20,000 8 in. x 8 in. merchantable spruce at $34.00 per M.

J. A. Likely, Rothesay Ave.—45,000 f.b.m. 12 in. x 12 in., No. 1 Common Douglas fir at $55.75 per M. 250 pieces 8 in. x 8 in. x 12 ft. 0 in., No. 1 Common Douglas fir, at $58.75 per M.

J. E. Moore, Dock St.—80,000 f.b.m. 12 in. x 12 in., merchantable hemlock, at $35.00 per M.

J. S. Gregory, Portland Point—250 pieces piling 20, 25, 30 and 35 feet long, at 7½c per ft.

No Further Steps in Wholesale Price Plan

In connection with the proposal advanced some time ago whereby John R. Booth, Limited, of Ottawa, was to supply food staples to its employees at cost or wholesale prices, no further steps have yet been taken in the matter which is still under consideration. During the latter part of May Mr. Jackson Booth was in attendance at a meeting of representative citizens for the establishment of a co-operation chain of shops. When asked by the "Canada Lumberman" if his attendance had anything to do with the previous project, Mr. Booth said that it had no relation to it.

The Booth sawmill is not likely to open until around the middle of June.

Turning to Other Classes of Work

Another instance of the adaptability of Canadian industries is seen in the case of the Port Arthur Shipbuilding Co., Ltd., which, following the course of events in the work for which the company was organized, has turned to other products, mainly in the form of pulp and paper machinery and digesters. In the last annual statement of the company, covering the year ended June 30, 1920, President James Whalen stated that: "In view of the present situation in regard to vessel construction, your directors have deemed it advisable to authorize the company to enter upon other work than shipbuilding, to which your plant is adaptable. Work has already been commenced upon a contract for twenty compressed air mine shovels for one company, and negotiations with other companies requiring this class of machine have advanced to a point where other contracts seem assured. The undertaking of other suitable work, including the manufacture of pulp machinery and digesters, is also contemplated."

Producers Selling Lumber Much Below Cost

Hardwood Manufacturers Show Reverse of Over Seven Dollars on Every Thousand Feet Disposed of at Present Prices—Expense Accounts Harmonize Closely

It is always interesting and instructive to study systems of costs. Many times of late it has been stated that lumber is being sold in Canada to-day at a considerably less figure than the actual outlay to manufacture it. Such an assertion rolls glibly from the tongue, but recent investigation proves the truth of the utterance "below cost." Much timely information in the way of a comparison of producing cost to selling price has been prepared and a careful analysis made by the Michigan Hardwood Lumber Manufacturers' Association, in which state conditions are analogous to what they are in Ontario or Quebec, shows a loss of $7.15 on every thousand feet sold at the quotations which prevail to-day.

The following statement which has just been issued by the Michigan Association, will amply repay perusal and close study:

In the press during the last few months a great deal has been said about the high cost of lumber and its influence upon building, etc. With this thought in mind the Michigan Hardwood Manufacturers' Association started a campaign to ascertain actual cost of producing lumber by sending out a questionnaire to its membership listing under separate heads the various costs that should pertain to the department in question, and from seventeen representative manufacturing firms, representing a cut of a little better than one hundred fifty millions, we received a very comprehensive idea. After obtaining the costs it was then necessary to ascertain the percentage of the various species of timber that the forests produced and also the percentage of grades that each specie produced in lumber. After obtaining this information we applied a test of 100,000 feet of lumber at values now being quoted by representative manufacturers, and this result shows that lumber is being offered to the trade to-day at $7.15 per thousand less than cost of production.

The following tables will show the cost of production, percentage of species and percentage of grades as ascertained in this questionnaire, and it was surprising to us to see how closely the various expense accounts harmonized:—

Production Costs as of May 1, 1921

	Per M ft.
Logging (from stump to and on car)	$11.11
From car to sawmill	4.96
Sawing	5.95
Yarding	1.92
Shipping and marketing	2.71
Miscellaneous (taxes and other overheads not included in above items)	4.29
Stumpage value	10.63
*Interest at 6 per cent. on timber, railroad and plant investment	8.13
	$49.70

*Computed on average of ten-year timber life.

Are Now Operating the Davison Plants

Fleming & Macleay are handling lumber and logs formerly owned by the Davison Lumber & Mfg. Co., Limited, Bridgewater, N.S., and are operating a sawmill at Springfield for about 2½ months. Fleming & Macleay are also running the LaHave mill at Bridgewater and are having some logs sawn at Eel Lake by a portable outfit. The working day consists of ten hours and there has been a reduction of about 20% to 25% in wages.

It is stated that the demand for lumber in Bridgewater district is not brisk and the general theme seems to be that those who can are holding off for better service. The production will not be large.

Queen Mary's Interest in Wood Work

Her Majesty Queen Mary was visiting the Building Exhibition in London and on passing one of the stands, remarked on the very finely figured panels that were shown. The attendant informed her Majesty that these were productions from nature—indeed, "Nature's picture book" which had simply been manipulated. "Yes," she replied, "but with clever hands."

Her Majesty showed great interest in these finely figured woods, and also samples of the various timber shown.

The attendant reminded her Majesty of the fact that at one of the previous Exhibitions, when she came on to the stand—observing a fine piece of carving, she exclaimed: "Look, what a beautiful piece of carving. How splendidly undercut."

Logging Bridge Timber by High Wheel Method

How One Million Feet of Bill Stuff is Being Taken Out for Canadian Government Railways by Eastern Lands Department at Foleyet, Ont., in "Pothole" Bush

To receive a Government order for 1,000,000 feet of bill stuff; to be cut, sawn and delivered within three months, is no small contract for any organization to carry out within the allotted period, and more particularly when the hauling season is over, the camps have closed and the lumber-jacks departed for pastures new or engaged in other pursuits. When the latter conditions are taken into consideration the heavy character of the undertaking will be all the more appreciated and rightly understood by those lumbermen who have had anything to do with production. The material for this huge undertaking has not only to be felled, hauled to the stream, and either driven or towed to the mill, but also to be cut in specified widths and thicknesses and delivered where designated, all within three months.

This is the large contract which the Eastern Lands Department of the Canadian National Railways is carrying out at the present time, and that department is going to make good on the job through the co-operation of its officials and staff and the spirited way in which the bushmen engaged in getting out the timber are working at camps No. 6 and No. 7, located within ten miles of Foleyet, Ontario. The latter is a flourishing lumber and divisional point 170 miles west of Sudbury and about 450 miles from Toronto. For the past five years it has been the scene of activity and one of the main factors of its expansion is the busy lumber and tie mill which the Eastern Lands Department built and equipped. But that is another story which will be referred to later. The topic in hand is the handling of the million feet contract of bridge timber, all of which has to be cut from red pine.

The specifications sent out by L. Lavoie, general purchasing agent of the Canadian National Railways, to Cyril T. Young, manager of the Eastern Lands Department, and Angus Prentice, purchasing agent and lumber sales manager for the same department, were that this bridge timber was to range in thickness and width from 3" x 10" to 8" x 18", and none of the sticks was to be less than 10 feet long, while 30 feet was the longest stipulated. The order also set forth the fact that 50,000 feet of piling, ranging from 25 feet to 65 feet in length,

A close-up view of high wheels used for logging near Foleyet, Ont.

had to be gotten out within the same period. The specifications governing the bridge timber meant that no trees of less than 12 inch diameter at the top could be used.

When an order is given to the Eastern Lands Department it goes without saying that it will be filled if it is humanly possible. The seven camps of the Canadian National Railways in the vicinity of Foleyet, had all been closed for the season, but when the edict went forth on April 1st to produce 1,000,000 feet of timber, two operations were reopened, those at Camp 6, of which Walter Bigelow is foreman, and at Camp 7, some two miles away, over which Patrick McDonald presides. All the camps are under the direction of John Jessup, of Foleyet, a veteran bush superintendent who has been with the Eastern Lands Department for several years and is still very much on the job. Both these camps are located on Opishkanogama Lake, and the timber is cut in the township of Ivanhoe. Foleyet is beyond the height of land and all the water runs to the north in the James Bay direction. The logs are floated to the mill by means of the Opishkanogama River, the Muskego and Midway Rivers.

Camps are Model in Every Respect

Before entering upon a detailed description of the operation, it may be stated that the camps built by the Eastern Lands Department are generally conceded to be among the finest, most comfortable and

Dumping the logs on shores of Lake Opishkanogama

up-to-date of any erected in the province. The sleeping quarters at the mills are electric-lighted and equipped with hot and cold shower baths. Each man has a private room and lies to rest at night on an iron bed fitted with springs and mattress and ample woollen blankets. The camps are also steam-heated and in point of sanitation and convenience nothing has been overlooked.

In the various camps on the logging operations the buildings erected represent the last word. After the studding is put up, they are sheeted on the outside and then covered with felt paper, after which tongue and groove siding is used to complete the walls, thus making the habitations of the woodsmen not only wind and damp proof but affording every protection from the cold winter of the north. Each man in the logging camps, like those in the sleep camps at Foleyet, has a single steel bed, mattress and springs. The housing arrangements are admirable and the cooking department is well managed and abundantly provided with good things.

About the only undertaking which the Eastern Lands Department of the Canadian National Railways do not carry out is the feeding of the men which is contracted for by a large company catering particularly to camp requirements and fare.

Railway Put Down for the Haul

At Camp No. 6, in order to expedite the getting out of the timber and have the logs placed in the lake and on their way to the mill as soon as possible, a standard gauge railway of nearly three-quarters of a mile in length was laid down on the top of jack pine ties and the 22-pound rails quickly spiked. Then several tram cars were secured and men, engaged in the work of felling the trees, started with enthusiasm under the direction of Foreman Bigelow. The country at this point is rugged and hilly, or what the lumberman calls a "pot hole" territory owing to the numerous depressions and ravines. As a consequence, the horses have to do some heavy hauling in drawing the large trees up and down hill to the various dumps from which the timber is skidded on to the tram cars. However, the work is admirably arranged and so systematically carried out that no time is lost and the railway put to most effective use. The lower portion of the railway is on an incline, and the cars, after the hauling horse is detached, travel a considerable distance by their own momentum, and are halted by means of a stop-log at the end of the track. Here the

logs are rolled off on to a sandy beach and, by cross-cut saws, cut into the required lengths before being dumped into the lake. The lengths of the logs before reaching the shore average the full length of each tree.

At Camp No. 7 under Foreman McDonald everything moved along with precision, the cutting, hauling and dumping being carried out without loss of time. For the first time probably in a "pot hole" country, the high-wheel method of hauling logs is followed. It is true that American high wheels from 10 feet to 15 feet in diameter have been used on a few operations in Canada, but mostly where the ground is level and the eccentric axle of the vehicle has been able to bear the load and prevent the timber from dragging.

High Wheels Used to Advantage

To institute the use of high wheels of 10 feet in diameter in such an uneven surfaced bush as the one at Camp 7, was a bold move undertaken by Mr. Young, the manager of the Eastern Lands Department, but successfully engineered by the workers. Some of the hills are very steep and the inclines such as to make most any kind of log-hauling dangerous. The huge cylindrical conveyors which were made by S. C. Overpack of Manistee, Mich., when moving along carrying three or four huge trees, look to the uninitiated something like a mammoth circus chariot or spectacular vehicle.

The operation, however, is simple. The wheels are drawn up the hillsides by means of a team of horses attached to an under-slung whippletree, located about mid-length of what might be termed the heavy tongue of the vehicle. After reaching the top of the hill, the wheels are swung around and straddle the logs numbering anywhere from three to five, which lay upon skids ready to be lifted. The horses are detached from the tongue. By means of a cant-hook the axle is turned and the tongue brought to an upright or perpendicular position. In order that the heavy pole may not fall to the ground on the opposite side, the driver's swing-board seat serves as a prop or a support.

A heavy logging chain is then run under the trees or sticks of timber from one end of the axle to the other and caught on an eccentric grab-hook attached to the axle. The raised upright tongue is then drawn by the horses over to the front of the vehicle, and this causes the draught chain which runs through a ring on the point of the tongue to elevate the logs so that only one end of them drags upon the ground, thus materially lightening the draught. In going down steep hills a log is hitched behind and dragged part way to the dump.

The comfortable sleeping quarters of the bushmen, each man having a single iron bedstead.

This rear log acts as a break and prevents the gigantic wheels with their load from descending too rapidly or running wild in any direction.

Sticks Dumped on Sandy Beach

As soon as the wheels have arrived at the foot of the hill, the anchoring log is detached and another team of horses attached. The two teams draw the load some 200 yards to the shores of the lake where the sticks are quickly unloaded by means of loosening the eccentric grab-hook. Then they are cut in the desired length by expert cross-cut sawmen and sent down the incline bank into the Opishkanogama waters.

This timber is now being cut to the required sizes in the sawmill at Foleyet, which, by the way, has undergone a number of improvements during the last year. A new 10-inch, gunshot feed, 42-foot long carriage, equipped with steam set works, has been installed, and is giving splendid satisfaction. It was made by the E. Long Mfg. Co., Orillia, and will add 10% to the output of the plant, which is capable of turning out 80,000 feet a day, including the railway ties (computing 30 feet to a tie). During the past winter the Eastern Lands Department took out 230,000 axe-made ties and expect to cut from 2,000 to 3,000 more daily in the mill during the present season. All told, the Eastern Lands Department will supply the road during 1921 with about 500,000 No. 1 and No. 2 ties, along with a small proportion of No. 3.

Sawmill Has Been Improved

It may be stated that the timber which is being taken out is for bridges, stations, braces, trestles, water tanks, coal chutes and platforms, and the million feet will represent some 12,000 pieces,

The lumberjacks at dinner in one of the C.N.R. model camps.

according to an estimate furnished the "Canada Lumberman" by Angus Prentice. The superintendent of the sawmill is C. W. Britton.

At the top of the jack ladder, there is a double set of steam kickers. Logs which are suitable for ties are kicked off the ladder to the left and carried by means of a trough conveyor to the twin slabber. The ties are then carried by live rolls and transfer tables to the tie trimmer and then delivered on to an endless chain running the full length of the mill and back to the river. Slides and rollers next take the ties to the water where they float down stream to be loaded in box cars by means of a tie loader. A large amount of work is automatically performed which, under former conditions, required several men to carry out.

The mill is equipped with a circular saw, those in use running from 48 inches to 72 inches in diameter. The principal kind employed, however, is the solid tooth, although the inserted tooth is now and then brought into use. Logs which make No. 1 and No. 2 ties are also sawed on the circular. The ties made are jack pine and the average life of a jack pine tie is estimated to be about six years.

The lumber sorting shed of the mill has also been considerably extended and now covers nine stalls from which the lumber is loaded on to high cars and distributed throughout the yards by means of a dinkey engine of forty tons capacity. There are nearly four miles of standard gauge track throughout the yards.

Several logs, cants and boards from the circular saw are transferred to a Morey double or bull edger. One side is a gang of ten saws, each of 26 inches diameter and capable of cutting 8 inches in width. The other half of the edger is used for edging the boards coming from the saw. The mill is also well equipped with trimmers, transfer tables, conveyors and hoppers, not forgetting the "hog." In the busy lath department Payette bolter and lath machines are used. The output is about 60,000 laths a day and at different times shingles are made. Logs, suitable for making shingles, are sent along live rolls to a butting saw at the east end of the mill where they are cut into 16-inch shingle blocks and conveyed to the basement. These blocks are placed in a "Clipper" shingle machine and from that go to the saw jointer. The shingles are then sorted and packed.

The Power Plant and Planing Mill

The mill is run in three different units and power is supplied the engines from three 150 H.P. Goldie-McCulloch boilers, which carry 150 lbs. of steam and are equipped with Dutch ovens. A 250 H.P. straight line engine operates the circular saw, carriage and twin slabber. A 150 H.P. Waterous engine runs the edgers, trimmers,

slash tables and all conveyors, while another 75 H.P. Waterous engine furnishes the necessary energy for the lath department.

During the past year a burner of 16 feet, inside diameter and 80 feet high, was built. The inside is lined with fire brick up to 65 feet, and here all surplus sawdust, mill refuse and other debris is consumed. The smoke stack is 7 feet in diameter, 130 feet high and has a 10 foot screen and iron ladder leading up to a walk surrounding the stack. Another item, which might be mentioned, is the installation of a roller stamp which automatically stamps all timber and ties with "Foleyet Mills" as the product passes over it.

A new planing mill has also been built which is equipped with a 14-inch Yates matcher, a 12-inch, 4-sided sticker, a circular resaw, a power feed rip saw, etc. Lumber from the yard is conveyed to the planer by overhead carriers, which deliver the load right in front of each machine.

It is the intention in the near future to install electric motors for individual drive in the planing mill. At present power is supplied by steam from the power house across the River Muskego, where the electric light plant of the company is also located. A 100 H.P. generator is driven by a Robb-Armstrong engine of 125 H.P., and light is furnished not only for the village and C.N.R. station, but also for the mill, yards, cookery and camps. The exhaust steam is employed for heating the sleeping quarters, the railway coach which the heads of the Eastern Lands Department use as an office, the cookery, the village jail (a real old-fashioned box car) and other buildings. A 16-inch diameter blower pipe system is installed and by means of a fan conveys all the shavings from the planing mill to the power house, thus supplying fuel for the power plant.

The Fire Protecting Arrangements

Many other improvements might also be referred to showing the progress which has been made, not only in equipment but in the varied lines of products during the past two or three years. It is not possible, however, to close without mentioning the well-equipped machine shop which now has a Butler lathe with a 16-foot bed, iron planer, power drill and other machinery which enables the Eastern Lands Department to carry out most anything in the way of repairs as well as do a certain amount of work for the C.N.R. roundhouse.

There is good fire protection throughout the mill, a Worthington fire pump with 6-inch suction and 5-inch discharge, while pipes extend all through the mill. Throughout the yards there are hose and pipes as well as two boiler-feed duplex pumps and an injector, thus assuring a constant supply of water to the boilers.

Foleyet has made great progress within the last two years and there is a splendid prospect of establishing a pulp mill at this thriving divisional point, while several new workmen's houses will go up. There is an abundance of poplar, jack pine and other wood available for a pulp plant, and with the rapid growth of the north, no reason exists why it should not enjoy a thriving connection.

So far as logging and sawmill operations of the Eastern Lands Department of the Canadian National Railways is concerned, there is certainly every evidence shown of foresight and enterprise, characterized by capable management and a firm faith in the expansion and development of the splendid and varied natural assests of the great clay belt in Northern Ontario.

R. B. Palmer, who comes to Montreal as representative of the Apex Lumber Co., Ltd., of Vancouver, and who will for a time make his headquarters at the Windsor Hotel, Montreal. Mr. Palmer is a brother of J. D. Palmer, President of the Hartt Boot & Shoe Company of Fredericton, N.B.

The Latest on New Lumber Sales Tax

As the "Canada Lumberman" goes to press word is received from Ottawa that a change has been made in the sales tax so far as it applies to lumber. The decision of Sir Henry Drayton, Minister of Finance, is that there will be only one tax and that on the manufactured product. The tax has been reduced from 3% to 2% and no further federal charges will be made on forest products other than those outlined.

It is said the change has been made with the object of removing obstacles in the way of structural operations and to encourage building.

An official notice from the headquarters of the Canadian Lumbermen's Association, Ottawa, Frank Hawkins, secretary, gives the latest interpretation of the tax and is as follows:—

> An amendment to the changes in the Sales Tax, so far as lumber is concerned, which came into operation midnight May 9-10, 1921, reduces the amount of the tax from 3% to 2%.
>
> The effective date of the present resolution dates back to May 10th, 1921, on and after which date the manufacturer will be called upon to pay to the Government 2% on the amount of his sale.
>
> The manufacturer must furnish the purchaser with a written invoice of the sale, which invoice shall state separately the amount of the tax to at least the extent of 1½%. (This means that the manufacturer may absorb not more than one-half of 1% of the tax.) He must not include in his invoice price any portion of the tax.
>
> It is specifically provided in the Resolution that the tax shall be payable by the purchaser to the manufacturer at the time of such sale. This means that the tax will be payable when the goods are shipped and invoiced to the buyer. (See separate paragraph regarding pro formas). After the payment of the tax payable by the manufacturer there is no further tax payable on resale.

What the Term Lumber Takes In

The term "lumber" includes the product of logs either rough sawn or dressed, flooring, siding, ceiling, and products of like nature wherein the essential character of the product is not changed into the whole or part of some specific article of remanufacture, such as furniture, waggons, sash, doors, etc.

Lath, shingles and pickets are considered as lumber.

Box shooks of rough or planed lumber cut to various lengths and widths come under the heading of lumber.

Poles, pulpwood and posts are in the nature of logs and round timber and are exempt from taxation.

Shavings and sawdust being waste products are classed as fuel of all kinds and are exempt from taxation.

With regard to lumber, etc., paid for on pro forma invoice prior to May 19th, 1920, and stored in the manufacturer's yard at the risk of the buyer no tax is to be paid.

On sales of lumber paid for on pro forma invoice commencing May 19th, 1920, and up to and including midnight of May 9th, 1921, but not shipped until on or after May 10th, 1921, if stored in the manufacturer's yard at buyer's risk, there is no tax of any kind.

On any sales, commencing midnight, May 9-10, 1921, the tax of 2% is to be paid by the manufacturer and he must charge not less than 1½% of this tax on his invoice, as above stated, and collect same from purchaser.

No Further Tax on Resale

In the case of a sawmill having a planing mill in connection therewith or even if the planing mill is situated at a considerable distance from the sawmill, where the lumber is simply transferred from one department to another the tax applies on the invoice value of the lumber, (product of such planing mill) as sold and shipped. That is to say, there is no sale of the lumber to the planing mill and consequently the price of the finished lumber is the criterion on which to base the sales tax.

As there is no further tax on resale after leaving the manufacturer's hands, it is only necessary for the manufacturer in respect of lumber to take out a license.

The above information cancels all previous circulars issued by this Association and has been confirmed by the authorized officials of the Government and we believe answers all questions which have been addressed to this Association in connection with the sales tax matter and will make same perfectly clear to our members.

New Name for Widely Known Business

The name of Batts, Limited, whose plant is located on Pacific Ave., West Toronto, has been changed to the Buyer's Door & Manufacturing Co., Limited. Messrs. Batt severed their connection with the firm some three years ago and the business of the Buyer's Door & Manufacturing Co., Limited, will be under the same manager, John S. Bond, who has been associated with the firm for the last eighteen years. He was formerly superintendent and for a long time has been manager. His brother, Thomas G. Bond, who has been superintendent of the plant since 1918, will continue in that capacity. He has been identified with the organization for some fifteen years.

John S. Bond, the vice-president and managing-director of the newly-named company, comes of a well-known family, which has been

J. S. Bond, Toronto

associated with the lumber and timber business for three generations. He himself has had an active, practical acquaintance with the industry for a quarter of a century, while his brother, Thomas G. Bond, has had fifteen years' insight in the trade.

The Buyer's Door & Manufacturing Co., Limited, are large makers of veneered and pine doors, which have found a market in all parts of Canada, and during the past year the capacity of this department was greatly increased. They are also manufacturers of staved columns, newel posts, frames, sash, flooring, interior fittings, mouldings, stairs, panelling, etc. Their mill and yards are thoroughly well-equipped and in connection with their office, they have spacious and inviting display quarters.

Mr. Bond announces that the high standard of goods, which have been favorably known to the trade for many years, will be maintained by the Buyer's Door & Manufacturing Co., and that the established trade mark of "B. L." has been retained.

Some Sidlights on Retail Lumber Advertising

The next time, Mr. Lumberman, you sit down to prepare some advertising on home building to appear in your local newspaper, just pause a minute and consider one or two important items which may either make or mar your copy. Your announcement should stand out as something distinctly human, arousing the dormant desire of the young husband and wife to own their own home. Retail lumber advertising has made great headway and some suggestions, culled from the opinions of people who have studied the art of stirring up interest on any subject through the medium of the printer's ink, should be welcomed, in the effort to place the "home idea" in the minds of the public. Before there is created a desire for any commodity on the market there must first be an interest, so that by advertising square plans, through halls, casement windows, coves, solariums, piazzas, and other attractions that would assuredly appeal to a definite prospective builder, it is obvious that this publicity would never appeal to a person not concerned in building a home, irrespective of how good such an investment might prove. There must be the implanted wish to possess a home of their own, which is the first step and, incidentally the foundation, to work on in your newspaper advertising.

Every thrifty family has a certain amount of surplus funds to spend, whether it goes in extravagant luxuries or worthy investments, and it is incumbent on the wide-awake lumber merchant to secure some of that available cash. How many retail lumber dealers to-day believe their chief competitors are owners of lumber yards? The majority of the dispensers of wood products are devoting the larger portion of their advertising appropriation, endeavoring to "outshut" their fellow dealers on values and bargains while the automobile agents are displaying educative advertising, appealing solely to the sense of comfort and other human propensities. They are selling motor cars right under the noses of the home building trade which industry should be using that powerful weapon — "owning your home." Surely such attraction as the pride in owning and furnishing a cosy nook can be exploited to a greater degree than it is at present. It is encountering stiff competition, of course, when it is human nature to enjoy and spend surplus cash on immediate pleasures, instead of making permanent outlays for the future. The people, who sell washing machines, or vaccum cleaners, have succeeded in their advertising and it was only by continued appeals to that desire for easier labor, and other such psychological arguments, which finally put the new ideas and creations across to the benefit of all concerned.

When you sit down to prepare an advertisement think of the human side of things, the way that the furniture men quote actual instances where homes were made happy again and the young peoples' interest bound up in the domestic life once more, instead of seeking outside pleasures and becoming indifferent to their own home solely because of the old-fashioned domicile and its surroundings. What is to prevent similar human advertising in the retail lumber trade, instead of blindly fighting over small matters and letting the big issue slip through one's fingers into the ready hands of outside competition. How many families are witnessing discord, with high rents and domineering landlords knocking persistently at the door of the dingy dwelling, when by means of the application of a little enterprise, the dollars, that were expended wantonly on needless luxuries, could be employed to turn the wheels of industry and make that dream of "our home" come true.

The purpose of the British banker's present visit to Canada is to arrange the development of a tract of 450 square miles of timber land in the Revelstoke district, British Columbia.

Mr. Benson, when interviewed, stated that already ten million dollars has been spent on the tract and that eighty million more is to be appropriated for the work. Mills and factories for finishing off the timber into various wood products will be constructed; some of them are already in operation.

Mr. Benson stated that while timber, like other raw products, was now a drug on the market, that five years from now it will afford a rich return to those who have the courage and foresight and capital to invest in it at the present time.

British Interests Will Develop B.C. Limits

Mr. Frederick J. Benson, head of the banking firm of Frederick Benson & Co., of London, England, was in Toronto recently, accompanied by Sir Connop Guthrie, former representative in the United States of the British Ministry of Shipping, and Sir Lionel Fletcher, who has recently been in British Columbia inspecting the vast timber limits which Mr. Benson is preparing to develop. Mr. Benson and his party spent the greater part of the morning in conference with Toronto bankers, and proceeded to Chicago.

The well-equipped saw mill of Graves, Bigwood & Co. at Byng Inlet, Ont., which will be visited at the end of July by the Ontario lumber retailers on their annual midsummer trip when they will be the guests of the company and will afterwards spend some two or three days camping at the mouth of the Magnetawan River where it enters Georgian Bay some five miles from the mill. The retailers will be provided with tents, blankets and a cook by Graves, Bigwood & Co.

Col. Loggie's Golden Jubilee of Service

When Lieut.-Col. T. G. Loggie, I.S.O., Deputy Minister of Lands and Mines, reached his office in the departmental buildings, Fredericton, N.B., on a recent morning, he found a monster bouquet of fifty carnations in a basket upon his desk. They had been presented by the department of lands and mines, including the forest service, and marked his completion of half a century in the provincial service. On

T. G. Loggie, Fredericton, N.B.
Deputy Minister of Lands & Mines.

May 11, 1871, Col. Loggie became a draftsman in the Crown Lands office under the late Hon. Benjamin R. Stevenson, then surveyor general. He had previously resided at Chatham, N.B.

About twelve years ago, Col. Loggie succeeded the late W. P. Flewelling as deputy minister, and in 1917 the Imperial Service Order was conferred upon him, the medal being presented by the late Lieutenant Governor Ganong. Congratulations poured in upon Col. Loggie from all parts of the province.

Dry Spring Halts Logs on Way to Mill

D. H. Haight, of Haight & Dickson Lumber Co., Limited, Sudbury, in a letter to the "Canada Lumberman," says that the cut was light around the Sudbury district last winter and a number of firms are having trouble in getting out what logs they cut as there has been a very dry spring. He adds that there is not enough lumber on hand nor will there be enough cut to satisfy the demand if building starts, and declares that the ear-marks are plentiful that structural activities will soon begin. "To give you an idea," he says, "there is one order for immediate shipment out now which if placed in this vicinity, would take every foot of last year's cut of 2 x 4 common jack pine, red pine and spruce along the Canadian Northern north of Sudbury to fill."

The bush fires, which have been raging along the Canadian National Railways north and west of Sudbury, have all been put out and no great damage to standing timber was done.

Lack of Interest in Wooden Houses

Harrison Watson, Canadian Government Trade Commissioner, London, Eng., in writing the Department of Trade and Commerce, Ottawa, gives an interesting account of the recent Building Trades Exhibition in the Old Country and declares there is a lack of interest in wooden houses. The public is giving way to concrete and other material. Mr. Watson says:—

The outstanding feature of the Building Trades Exhibition at Olympia, London, is the large number of displays (somewhere about fifty) associated with the concrete industry.

These embrace a variety of old and new methods of concrete and reinforced concrete construction, and include machinery, appliances and accessories. In several cases demonstrations of the manufacture of blocks, etc., are given at regular intervals.

It is stated that some of these systems have been employed in the various housing schemes which have been carried on in different parts of the United Kingdom, and a casual inspection of housing developments in various parts of the south of England at least shows that concrete has largely supplanted brick and stone, a result which is probably due to a certain degree to labor considerations.

Little more than a year has elapsed since a determined effort was made to popularize the erection of the wooden house in England, and at the last Housing Exhibition which the writer attended a large variety of wooden houses were actually displayed and attracted much attention.

It would appear, however, that the view expressed at the time by recognized authorities in building that, owing to the conservative nature of the masses, there was little likelihood of wood replacing the dwellings to which they are accustomed, is certainly confirmed at the present exhibition, where there was apparently only one display connected with wooden houses, namely, that made by Messrs. Boulton & Paul, Limited, of Norwich, of a standard permanent wooden house, the price of which ranges from $3,722 to $4,194, depending upon plans.

It is to be feared that such prospects of a more general adoption of wooden houses as might otherwise have arisen were destroyed by the high price of wood and of transportation which ruled at the time. Indeed the exigencies of the time seem to be causing a decline in the use of wood in many other directions, because metals, concrete, and other materials are at the exhibition extensively substituted in many building supplies of which wood was formerly the chief constituent, and in the same way, concrete and other substances, with beaverboard or similar linings, have been adopted for constructional purposes. The result is that there are a number of exhibits of beaverboard and similar compositions, including that of the Beaverboard Company, Limited. There are also a number of displays of plywood for decorative purposes.

A prominent feature of the present, as in the case of most recent housing exhibitions, is the display of a large variety of labor-saving appliances, a direct result of the recent shortage in the supply of domestic servants. One that has attracted a good deal of attention is what is described as a "kitchen scullery," shown by the British Canadian Export Company, Limited, of Canada, which, 7 feet square, is equipped with the "Barnet Easiwork" kitchen dresser, sink, draining board, plate racks and geyser, and "Barnet" refrigerator.

Duke of Devonshire Visits Hastings Sawmill

His Excellency the Duke of Devonshire, Governor-General of Canada, who has just recently completed a farewell tour of the Western provinces, paid a visit to the Hastings Sawmill, the plant of The British Columbia Mills Timber & Trading Co., during his stay in Vancouver. In passing it may be mentioned that this was His Excellency's third visit to the mill, which is evidence of the interest he takes in the development of the industries of the country.

His Excellency and party, which consisted of the Marquis of Hartington, Lord Charles Cavendish, Captain Balfour, A.D.C., and Captain Foster, honorary Provincial A.D.C., were received by Mr. E. W. Hamber, the president of the Company, Mr. Arthur J. Hendry, the general superintendent, and Mr. J. Alex. Hendry, the secretary.

The various departments in the mill were visited, in which His Excellency and party showed much interest. Particularly were they interested in what they saw on the log "deck." The ease with which the huge Douglas fir logs were handled by the modern mechanical appliances, and sawn into the familiar H. S. M. brand of timbers, and the way in which these were carried away by the live rolls to the wharves for shipment abroad, much impressed them.

On leaving, His Excellency expressed to Mr. Hamber his pleasure at having had another opportunity of visiting the mill, and Mr. Hamber offered him on behalf of the directors of the Company his best wishes on his approaching return to the Old Country, expressing also the hope that His Excellency would find time again to visit Western Canada.

Car Stake Allowance is Continued

The Transportation Bureau of the National Wholesale Lumber Dealers' Association in February, called attention to a proposal docketed for consideration by the Western Trunk Line Committee to cancel certain rules, which provide for a car stake allowance of 500 lb., on lumber shipments, and to substitute a rule providing that in order to obtain a car stake allowance the actual weight of stakes must be specified on shipping order and that such actual weight would be allowed when less than 500 lbs., and only 500 lbs., when actual weight was in excess of 500 lbs.

Members of the Association have now been informed that this proposal has been dropped at least for the present. Through the Railroad and Transportation Committee many members submitted statistics which were helpful in opposing the proposal.

It will be recalled that the National Wholesale Lumber Dealers' Association instituted the old car stake proceedings some fifteen years ago, and which resulted in securing the 500 lb. allowance. This is a reasonable allowance and should be continued and the Association has assured its members that it will keep in touch with the situation if any effort is made to change or abolish the allowance.

Standardization of Dimension Stock Discussed

Certain Outstanding Features which Particularly Concern Lumbering Interests—Viewing Problem from Right Angle of Approach—Dimension Stock Specialty

By Wm. A. Babbitt, South Bend, Ind., Chairman of Committee on Standardization, Association of Wood Using Industries.

The first paper on the subject of Standardization of Dimension Stock for Wood Using Industries endeavored to set forth the preliminary steps necessary to be taken before the standardization project could be properly launched. After showing that the origin of the present movement goes back to the efforts of wood users to establish a sound basis for cost accounting (which basis will always be one of the principal benefits of standardization), figures were quoted showing the great importance of standardization from the viewpoint of lumber conservation. The paper then proceeded to indicate and briefly discuss some of the more obvious reasons which prevented the general turn of wood using industries from lumber to dimension; and which prevented lumbermen from widely undertaking so obvious and effectual method of salvaging waste and getting a better return for low grade lumber.

It is not the purpose of this paper to discuss manufacturers' problems involved in the production of Standardized Dimension. We wish to present certain outstanding features of the standardization program which particularly concern the lumbering interests. This paper is an effort to view and attack this problem from the right angle of approach.

Importance of Appreciating Consumers' Viewpoint

One might easily and safely hazard the opinion that the lumberman who is not willing to take the time and trouble to get the woodusers' point of view had better stay out of the dimensions program altogether. In fact, the writer believes that in no other way can a lumberman get a proper sense of the importance of small things in present day lumbering more easily and accurately than to look at his business from a woodusers' standpoint. The wooduser is daily brought face to face with these "small things" in lumber. He knows how tremendously they effect his whole production problem. These "small things" the lumberman is apt to overlook, but the wooduser cannot do so.

We will assume, for the sake of illustration, that a lumberman has gone into the production of dimension for some large manufacturer of turned wood products. This customer wants his stock sawed in steps of one-eighth of an inch, throughout a certain range of sizes. Such a specification might strike a lumberman as unreasonable, especially if his customer should refuse oversize squares. Let us say that the customer wants 1" x 1" squares, while the lumberman only has 1⅛" x 1⅛" squares. Why be fussy about so small a matter as ⅛" oversize?

But the customer is not unreasonable, and he can easily show the reasonableness of his position. D'd you ever figure the difference in volume between an 1" x 1" square and a square that is ⅛" larger? Probably not. But the manufacturer of turned wood products knows —or ought to know—that if a certain job requires five thousand feet b.m. of 1" x 1" squares, he will have to pay for 6.250 feet, providing he listens to the lumberman who wants him to buy for this job, squares only one-eighth of an inch oversize.

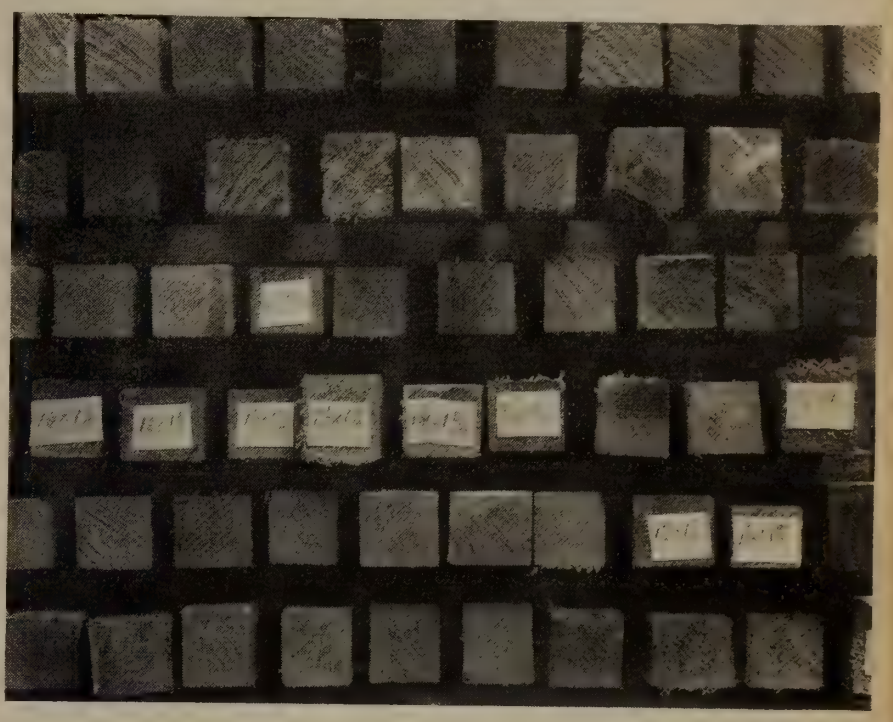
1;250 f.t of this stock will be thrown into shavings, at an extra cost of $125.00 for material plus the cost of manufacturing that 1,300 feet of lumber into shavings plus the cost of slowed production, due to the excessive turn-off, on account of unnecessary oversize. This ⅛" oversize square is 25% larger than the required square. It would be very conservative to state that this ⅛" oversize, in this case, would add at least 50% to the cost of raw material for the job. The point is that the woodusers' attitude is not always stupid or unreasonable. Sometimes there is a very valuable grain of sense and gleam of intelligence therein.

The Reverse Side of the Illustration

The reverse side is naturally the lumberman's side. Let us suppose the lumberman had said to his customer: "I haven't the one inch squares, but I will give you the inch and one-eighth at the same price, as there is very little difference." The customer accepts. How does the lumberman come out? He sells his inch and one-eighth squares at a discount of over 20%, assuming that he was selling both sizes on a 100.00 per M base.

Further, this illustration sheds new light on the importance of proper equipment for sawing. The writer's somewhat extensive observation would tend to confirm the opinion frequently expressed that most dimension outfits are equipped with saws that produce one inch squares from stock which with proper saws would produce inch and one-eight squares. In which case, 200 board feet or more are converted into saw dust, for every thousand feet of merchantable dimension stock produced—board feet which ought to be sold for real money. On an average dimension mill run of 7500 ft. a day, some 1500 feet of merchantable stock daily "goes up the flue." The point is that the question of saw kerf is much more important in manufacturing dimension stock than in manufacturing plank. It is as many times more important as the average number of rippings per board.

Could there be any school of economy for lumbermen, more suggestive and profitable than to operate a dimension mill with persistent and intelligent reference to saw kerf and net footage in terms of dimension stock?



Illustrating a lot of so-called "squares"

The writer has ventured to extend his illustration to this great length in order to bring home the vital point that it is all important for lumberman to see this dimension problem from the view point of their customer. Furthermore, we wish to make plain that there is no step in the dimension program which is not characterized by similar mutual advantages.

Dimension Stock Must be a Specialty

One of the vivid and still fascinating memories of my childhood is the visit of the family doctor of—well a good many years ago. What a wonderful medicine case he carried! The very smell had healing virtue. And what wonderful cures he compounded! Ten to fifteen drugs for a tumbler of dosage were common, along with half a dozen kinds of pills. In desperate cases he loaded his shot with nearly his whole line. So we grew up strong and husky. But now doctors are becoming specialists. They have to be. And incidentally they find it more profitable—or, at all events, it costs their patients more.

There seems to be certain similarity with regard to dimension stock. To succeed, one must specialize. It would be a big undertaking for one mill to cover the standard specifications for, let us say, farm wagons. Very few mills would safely undertake to stock the line of specifications which have been submitted by the National Association of Wood Turners. Careful students see little chance for the mill who imitates the "shotgun dosage" practice of the doctors of the old school. It would seem to be folly for any mill to attempt to cover a tenth part of the furniture manufacturers' requirements.

So this program of standardization evidently requires a lumberman to approach the production problem with reference to a particular field, rather than in a general way. In a word, he will be under necessity to decide, not to manufacture dimension stock, but

to manufacture certain lines that careful surveys show (1) to be easily and readily marketable; and (2) which interlock, so as to use up all stock available for dimension to the best advantage. Furthermore (3) he will install machinery with special reference to his specialized lines.

Clearing the Ground for the Work

If it is safe to say that the lumberman who is unable or unwilling to approach the standardization problem from the wooduser's point of view had better stay out altogether, it is equally safe to say that he also had better stay out unless he is prepared and determined to dismiss a number of long settled and totally mistaken ideas about dimension stock. It will make all the difference in the world whether the lumberman looks down on, or looks up to this program. We've got to respect our job. To mention some of these fundamental opinions which are quite mistaken.

1. That dimension stock is a low grade proposition. It will be essential to success to root out this idea, though frequently it will require a mental stump-puller to turn the trick. This operation would kill some of us.

But the truth is that dimension stock stands out as the sole high grade proposition. Dimension stock is lumber refined to its highest utility and greatest economy. Dimension stock is lumber with the destructive wastes eliminated. Most dimension stock grades higher than any commercial grade, especially in hardwoods. It is true that the bulk of all dimension can be manufactured out of low grade lumber, but the dimension itself is ordinarily top grades.

2. The dimension stock is a low grade manufacturing proposition. This mistaken belief is so firmly fixed in the minds of the production staff that, in many cases, mental stump-pullers will be useless. Nothing short of a funeral, or a flock of funerals, will correct this evil. We are in possession of all the necessary data to prove that the chief reason why most attempts heretofore to salvage the obvious wastes of lumber operations by manufacturing dimension stock have failed is because the producer did not realize that the manufacture of dimension stock is a much higher and more difficult production problem than sawing logs.

When Squares Are Not Square

In order to get this matter vividly before you, we are submitting a photograph of a lot of squares. These were manufactured by a concern that stands second to no other, as producers of accurately manufactured lumber. I know of no mill with better mechanical equipment. Yet study this picture. Can you find a single square in the lot? If you do, most likely the other end would prove to be some other shape. The writer has had most unusual opportunity to investigate this phase of the question, and he wishes the reader to understand that this picture does not represent an unusual case.

3. The third mistaken idea is that the curing of dimension stock involves the same factors and methods as curing plank lumber. In this connection, it is to be said that the Association of Wood Using Industries has secured the assignment of a specialist from the Forest Products Laboratories to give this problem the same attention that has marked their handling of the problem of kiln drying lumber.

4. The fourth mistaken idea is that the problem of properly handling and grading dimension stock is not a basic condition of success. Nor is this a simple problem. One of the main tasks in the program of standardization is to determine how this stock can be handled economically on grades. Many a permanent customer for dimension has been killed off by receiving a car in which grades, sizes and kinds were dumped in one chaotic jumble.

The Requirements for Production

Standardized dimension stock requires the manufacturer to put new meaning into the word "accuracy." The production penalties against inaccurately sawed dimension stock are very much greater than those which apply to mis-sawn lumber. In most cases, mis-sawn dimension has little or no salvage value. Oversize, not infrequently, will be found an objection of considerable importance to the wooduser. It is always a serious loss to the producer.

Years ago, when the new standards of accuracy were coming into vogue, an oldtime machinist came along and watched the writer finishing a set of drawing dies. After a while he remarked, "I reckon that a sixteenth of an inch would make quite a bit of difference on the fit of those dies!" I reckoned so myself. Today there are not a few woodworking plants who work to limits of .001 at a fixed humidity. Relative to general practice in manufacturing plank lumber, a corresponding increase in accuracy is called for in manufacturing dimension stock.

The second requirement is speed. Dimension stock must be handled fast. In some of the oldtime dimension mills, down East, which have specialized on spool bars (from which thread spools are turned) for many years, it is no uncommon case for a gang of nine men to saw and pile eight thousand feet of dimension squares per day, as an average for the season. This includes removing the edgings and waste. There is all needed experience to show that it is possible to produce accurately sawed dimension stock at high production speeds.

The third requirement is economy. Attention has already been directed to this point in the opening paragraphs of this article. The cost of unnecessary kerf, of careless layout of cuttings, of unnecessary oversize, of mis-sawing and of mishandling are enormously greater than corresponding faults in commercial lumber.

Furthermore, to handle dimension economically for both the producer and the consumer, it will probably be necessary to go to some expense to separate grades and lengths and sizes, and to bind these in secure separate bundles. All these precautions and careful methods cost money and must be paid for, with a reasonable profit, by the buyer. But dimension stock is worth more to the buyer than clear lumber in the plank, in nearly all classes and grades. If it is the duty and privilege of the lumber associations to educate and encourage their members to manufacture dimension stock which is as good and as standard as wheat or gold, it is equally the duty of the associations of the wood using industries to educate their members to the economic value to them of standardized dimension stock, so that their buyers will recognize and pay the higher values that lumber in this form represents, as compared with commercial lumber.

The woodusers have had the opportunity of reading this discussion from a lumberman's point of view. The purpose of the next paper is to discuss the same problems from the wooduser's viewpoint. It will then be the privilege of the lumberman to reciprocate.

Bid of Tomiko Company Was Highest

The Tomiko Lumber Co., Bank of Hamilton Building, Toronto, were successful in their bids made recently for the timber-cutting rights of red and white pine in Afton and Sheppard townships. Tenders were called by the Department of Forests and Lands which closed toward the end of April. The following are the bidders and the amounts:

	Bonus	Crown Dues	Total
Tomiko Lumber Company, Toronto			
Red and White Pine Timber.....	$18.00	$2.50	$20.50
Ties (Red and White Pine)	.20	.10	.30
S. L. Lambert, Welland, Ont.			
Red and White Pine Timber.....	$17.45	$2.50	$19.95
Ties (Red and White Pine)	.15	.10	.25
Mageau Lumber Co. Ltd., Field			
Red and White Pine Timber.....	$13.13	$2.50	$15.63
Ties (Red and White Pine)	.19	.10	.29
Gillies Bros. Ltd., Braeside			
Red and White Pine Timber.....	$12.00	$2.50	$14.50
Ties (Red and White Pine)	.25	.10	.35
Geo. Gordon & Co. Ltd., Cache Bay			
Red and White Pine Timber.....	$11.65	$2.50	$14.15
Ties (Red and White Pine)	.22	.10	.32

How Live Concern Lists All Builders

The Wilson & Greene Lumber Co., of Syracuse, N.Y., is steadily amplifying its building service facilities, its latest addition being a list of every contractor, builder and carpenter in Syracuse that forms a sort of building information clearing house. With the name and address of the individual contractor, builder or carpenter there is listed the kind of building he specializes on. Then when the lumber company receives an inquiry from a prospective home builder and is in search of someone to undertake the contract, the man in charge of the building department runs through the list until he finds the contractor who leads, or is in condition to erect the particular style of home or building desired, and then refers this contractor to the prospective home builder.

The company believes that this system will work very well. A great many people after choosing a plan from which to build are totally at a loss as to the selection of someone to do the actual building, and by assisting them the company feels that it is filling a want long felt. The plan service of the company, recently installed, is complete and all prospective builders are supplied with plans free. Furthermore the public is impressed with the fact that the information as to builders or information as to plans does not put anyone under any obligation.

Lumber orders are in excess of output, according to figures compiled by the National Lumber Manufacturers' Association at Washington. Production was 9 per cent below shipments in April. For the week of April 23 the cut was 142,063,734 feet and shipments were 157,235,859 feet. For the week ending April 30 the cut was 152,243,341 feet and shipments 171,421,272 feet.

Wholesale Lumbermen Discuss New Sales Tax

Various Features of Measure Reviewed—Resolution Carried in Favor of Levy Being Collected at Origin of Supply—Some Points to be Cleared Up Yet

The new sales tax imposed by the Dominion Government in connection with the sale of lumber has been the subject of much discussion, interviewing and speculation since the Budget was brought down by Sir Henry Drayton, Minister of Finance, at Ottawa, a few days ago. Like a great many amendments and clauses, the original draught is subject to various interpretations, and it is expected that a final ruling will be made within a few days on how and whom the tax is to be levied. The matter is now under consideration.

A number of wholesale lumbermen, who believed that an effort was being made to pass part of the tax on to them, have sent protests to Sir Henry Drayton. One representative firm said: "We have been given to understand the final decision in connection with the question of 3 per cent. on lumber sales has not yet been made. We desire to call your attention to the fact that the wholesaler assists the manufacturer in his financing through making advances on stock which he purchases from time to time and is, probably, hit harder than any other branch of the trade at present through depression."

The communication also stated that the wholesaler suffered very serious reverses through having to sell his stock at a loss of from 30% to 50% under costs, and that many of them were taking an average loss of about 30%. "In view of this," stated the firm, "we feel it is but just that the manufacturer should at this opportunity participate in the sales tax which he has up till now completely escaped. In addition, it is very much easier for him to compute the tax on the cost of his lumber and pass it along to us (the wholesalers) than it is to have it shown on the invoice and compel the wholesaler to take a very large proportion of it to himself. Conditions in the lumber trade to-day are abnormal. We have no hesitation in saying that if this is permitted, it will work a very serious hardship to the average wholesale lumberman to the extent of completely eliminating quite a number of them from business."

Wholesalers Protest at Passing it Along

Another leading wholesale firm sent a communication to the effect that they understood the decision regarding adjustment of the 3 per cent. sales tax on lumber between the manufacturer and wholesaler had been deferred, and added: "As strictly wholesalers, we maintain that to permit manufacturers to collect from wholesalers would be decidedly unfair to the latter because the wholesaler is trading on a small margin and now absorbing enormous losses on last year's cut purchased from the manufacturer at high prices. The manufacturers' control their price, which is the first cost to buyer always, and their selling price should include tax; in fact it must include the tax to be personally workable, and if part of the charge is passed on to the wholesaler, it will force many of the latter out of business."

This practically sums up the attitude of the wholesale trade in regard to the newly imposed tax of 3 per cent. on lumber, which commodity under the Budget resolutions is treated differently from other commodities, in a separate schedule providing for a total sales tax of 3 per cent.

Much discussion has arisen as to whether the tax payable by the lumber manufacturer could be passed on to the wholesaler and also whether the tax should be shown separately on the manufacturers invoices or whether it should be included in the price of the product. The Montreal Lumber Association and the Wholesale Lumber Dealers' Association of Toronto, and other bodies, have discussed the matter at considerable length.

One of the features pointed out was that the sale tax on lumber differs from that of other commodities in that no excise tax is payable on re-sales.

Deputation Saw Finance Minister

A large deputation of lumbermen representing manufacturers, wholesalers and retailers, were in Ottawa recently and interviewed Sir Henry Drayton, Minister of Finance, R. W. Breadner, Commissioner of Taxation, and others respecting the application of the tax. There are several points still in doubt, and an interesting report of what took place, as well as lively discussion thereon occurred at the regular monthly meeting of the Wholesale Lumber Dealers' Association, held at the Albany Club, Toronto, on May 20th. Among those who gave their version of what took place in the interviews at Ottawa, were Chairman A. E. Eckardt, A. C. Manbert, A. E. Clark and others.

The question was discussed fully for an hour or two and all the points which have been represented to the Finance Minister, were brought out. Mr. Manbert announced that the situation at the present time was largely tentative and the decisions inconclusive. A series of questions was left with the authorities as to who should pay the tax and definite rulings were asked regarding its application.

The following resolution was carried by the Wholesale Lumber Dealers' Association at its meeting in Toronto, on May 20th:

That this Association goes on record as being in favor of the clause as it now appears with respect to lumber by the addition of the words after the word "collect" of the following: "From the manufacturer and producer," and that a copy of this be sent to the Minister of Finance at Ottawa."

Some Things That Are Yet in Doubt

Some points regarding the tax had been cleared up, and among them are the following:

All manufacturers or producers are required to pay to the Government 3% of the selling value at the time of sale of lumber, lath, shingles and pickets. Firewood is excepted. There is to be no tax on flooring, base, casing, mouldings, etc., but on factory work, such as doors, sash, frames, etc., the tax is 1½% and 3% according to the status of the customer—contractors 1½%, consumers 3%.

On purchases paid for under pro formas previous to May 10th, the mill or producer, as formerly, collects 1% from the purchaser who will add 1½% to invoices on re-sale.

The wholesaler is not required to charge or collect any tax on purchases made after May 10th.

Among the points yet to be cleared up are.

Whether the mill or producer absorbs the tax or on the other hand is compelled to show it on his invoice separately.

Whether the wholesaler or purchaser of stock contracted and paid for previous to May 10th should be required to charge, collect and remit to the Government 1% or 1½% or make no charge at all.

Whether a manufacturer or producer who has in connection with his sawmill a sash and door factory, would be liable for 3% on lumber in the rough and also 3% on the manufactured goods.

Seeking to Have Freight Reduced

Several other matters came up for discussion during the evening, one of which was to the effect that R. L. Sargant, new traffic manager of the Canadian Lumbermen's Association, Ottawa, had made a request for the firms to send in the present freight rates on shipments to leading points in Ontario, together with a statement of the rates which prevailed in 1914. It is understood that Mr. Sargant has undertaken to secure data with a view to getting the rate reduced, and wants to have all available information before him. A motion was carried that the members forward to Secretary Boultbee a list of their leading shipping points and rates in 1921 and 1914. Mr. Boultbee will see that they are then forwarded to Mr. Sargant.

A communication was read from Theo. A. Sparks of Winnipeg, calling attention to the fact that the emergency tariff bill at Washington was likely to pass and that if it was adopted in its present form, it would impose a duty on Canadian lumber and strike a blow at the export trade in forest products. It was suggested that the members take up this matter and see what could be done to have the proposed tariff set aside. The matter was referred to the executive to deal with.

It was reported also that the membership of the association is now 42, which is the largest on record.

An invitation was received from the Lake Shore Country Club, of which W. F. Oliver is president, to hold their June meeting at the clubhouse of the organization, located some fifteen miles west of Toronto on the Hamilton highway. It was decided to accept the invitation and meet there on June 17th.

Col. R. M. Beckett of Quebec was present and was given a warm welcome. He said wherever he went he found the three chief topics of conversation were the sales tax, business and booze, and upon these three points he made some humorous references which were well received.

Brig. Gen. John A. Gunn, D.S.O., of Gunn's Limited, Toronto, delivered an instructive and timely address on the development of the packing industry in Canada and its close association with the lumber trade. He remarked that industries, like individuals, are improved through suffering, and if this was true he was sure that the lumber and packing industries would be helped in the future.

Increasing Fire-guarding Force of Ontario

E. J. Zavitz, Toronto
Head of Provincial Forestry Dept.

The fire ranging force in Ontario will be considerably augmented this season. The extra staff appointed is composed principally of returned soldiers who have had some insight and experience in the important work in which over 1,000 men will be engaged until the fall months. The Department of Lands and Forests is also extending its system of lookout towers throughout the northern and northwestern part of Ontario. Fifteen new ones will go up in the Timagami Reserve and in the Mississauga country. There had been 84 lookout towers in various sections of the North country up to this year, and the department has found them an economical and efficient means of promptly detecting forest fires during the dry season.

E. J. Zavitz, head of the Forestry Department, says that a man on the lookout tower at Timagami Station can readily detect smoke at Bear Island, 16 miles away to the west, and he is connected by a telephone system to another tower at Bear Island, with other towers strategically placed similarly linked up with the system. Until steel towers are materially reduced in price the department will continue to construct wooden ones.

Owing to the expense involved no airplane fire scouts will be put out this year. It is pointed out at the department that the difficulty in dealing with forest fires has never been that of detection, but rather that of having an efficient local fire fighting unit in the particular neighborhood to deal with it. In addition to the new towers there will be some addition to the "jigger" crews which patrol up and down the Transcontinental.

Fire Destroys Four Million Feet of Lumber

Fire recently destroyed about 4,000,000 feet of white pine lumber which was cut by the Marshay Lumber Co. at their mills at Laforest, Ontario, located some 40 miles west of Sudbury on the Canadian Nationay Railways. About 3,000,000 lath were also consumed. It was only by hard fighting and the most strenuous efforts on the part of the men in the mill and others that the flames did not wipe out the entire plant. The lumber was sold to the Union Lumber Co. of Toronto. The loss is, approximately, $230,000, and is fully covered by insurance. Forest fires were raging in many parts of the country round about Laforest during the middle of May, and it was only the timely arrival of rain that prevented other lumber companies suffering heavy reverses.

Manitoba Forests Were Damaged by Fires

The rain and cold weather of the past few days proved of the greatest value in stamping out a number of forest and prairie fires, that were burning in various parts of Manitoba, officials of the Forest and Fire Rangers' Department of the province say.

Nearly 25,000 acres in the forest reserve at Turtle Mountain suffered fire damage. The fire burned for four days before being brought under control of the fire rangers, who were assisted by nearly all the men in the neighborhood. Damage was mostly to young growth, as there is no big timber in this district.

There were also several small prairie fires reported, especially in the southeastern district, but the wet weather put an end to them.

Hoisting Lumber by Mechanical Means

Lumber manufacturers are interested in the practical demonstration of the portable lumber elevator that is now one of the products of the Vulcan Iron Works, of Vancouver, B.C. John R. Duncan, managing director, has secured the exclusive right for Canada to manufacture and sell the Sky Pile-It elevator. The machine has been tested out in severe, long, practical work and has proven, the makers say, that it will do the work it is built for. It is a light, portable power-driven elevator for piling or unpiling lumber in yards. It is said to cut the cost of piling by 50 per cent. under hand-piling, and it enables two men to pile 36 feet high, with the upper half costing no more than the lower. The lumber is carried up or down by dogs on an endless chain and is built "fool proof" for operation and handling.

High piling of lumber is of especial advantage in yards of restricted area. It is claimed that with the Vulcan machine a yard's storage capacity can be doubled. This means saving of area, of roof boards, and double insurance against warping. It also speeds up in the air-drying, especially if the pile is constructed with a chimney in the centre. The machines can be manufactured cheaply and marketed at a reasonable cost. Many are in use in the United States, but nothing of the kind has yet been introduced in Canada. One machine will pile 150,000,000 in a year. The cost of operation is about one dollar per day. The lumber elevator is known as the "Sky-Pile-It."

Splendid "Toothpicks" from Timberland Lumber Co.

It takes tall timber to turn out sticks which require three 40-foot flat cars to carry them. Such a triple car shipment has just been produced at the Timberland Lumber Co., Ltd., mill on the Fraser River at New Westminster. The sticks are not as long as some that have been shipped in the past, for the mill has turned out timbers 110 feet in length. The longest of these was 85 feet, and the range was from 60 to 85 feet. These timbers were more noteworthy for their general excellence, the entire shipment being of extremely high grade. The close-grained character of the wood, the absence of any but very small tight knots, and the uniform high quality, were outstanding. The sticks were 12 x 12, 12 x 14 and 14 x 14 in dimension, and all were dressed on four sides. The order for these timbers was specially placed by Mr. Geo. McDonald, Vancouver, manager of the McDonald Lumber Co., Ltd., Winnipeg and Vancouver. They are for the heavy framework of a pulp and paper mill to be erected at Kenora, Ont.

Just to give an idea of the work entailed in filling such an order Mr. J. G. Robson, manager of the Timberland Lumber Co., pointed out that the cruisers on the company's limits near Ladysmith, Vancouver Island, had to select the trees, which were brought fifteen miles on the company's logging railway to tidewater at Oyster Harbor. But getting the trees from where they grew to the waterside includes a number of other processes. In ordinary course of logging the logs being taken out are felled and bucked a week ahead. When a special order has to be got out, it means moving a donkey engine and rig into the location where the trees are selected in order to get the timbers to the logging railway. The boom, in which the sticks were made up, had to stand to in Clam Bay for a week before the weather was safe for towing. Even then squally weather caused the tug to make for shelter, but not before the storm almost broke up the boom. Many of the logs were lost entirely, but the special long sticks were swept up on shore and afterwards gathered up. The mishap caused another week's delay before the boom was safely towed into the Fraser River.

Getting the squared timbers out of the logs is an easy matter in the Timberland mills, which is equipped for that work. In fact, the company specialize in timbers and much of their business is special orders of the character of that just shipped. Their timber on the Vancouver Island limits is of high quality in common with the uniform grade of the stand of Douglas fir on the island. To complete the three cars, filling space at the end of the third, some fine joists 3 x 12, 30 feet in length were included in the shipment. Some magnificent timbers 12 x 24 in dimension were recently cut at the Timberland mill for shipment to Ontario. They are to be used in constructing lock gates on the Rideau Canal. With their equipment of rolls the heavy timbers, which are constantly being turned out, are handled with the minimum amount of heavy labor and lifting. As they come from the saw the sticks which are to be dressed are turned off the platform into a dock at one side, close to the planer house. Those which are to be shipped in the rough are dumped off the platform into a dock at the other side, whence they are loaded direct into the car. Not more than four men are required to handle these big timbers, so conveniently is everything arranged.

Southern Pine Adopts Standard Sizes

The Southern Pine Association at their annual meeting last month adopted the recommendations for standard sizes of yard lumber as prepared and submitted by the National Lumber Manufacturers' Association.

Final recommendations for these standards were made by the National after a year of careful research work together with suggestions and corrections made by a number of distributors and consumers.

Avilliard Bedard, Assistant Chief of the Quebec Provincial Forestry Service, said recently that there have been no forest fires this year in the province of Quebec, compared with corresponding periods. This is due, he said, to adequate protection given by the co-operation of the limit holders and the officials of the Department of Lands and Forests.

What is House Rent? — Who Fixes the Rent?

Working Man in Canada Can Reduce His Own Rent by Building More Houses, Which is the Genuine Emergency Task in Which All Classes of People are Concerned—New Points on Housing Problem

Wheresoever two or three Montrealers are gathered they talk rents! What is rent? asks the "Star" of that city in a sane and timely editorial which is well worth perusal. Some think that it is a sum of money paid a grasping gentleman whom they call "a landlord." In many circles the word "landlord" is employed as an epithet. In their more conservative days before the Irish extended their game laws to include all sorts and conditions of unpopular persons, "gunning for landlords" was a national sport in that lively Island.

But rent is much more than the levy of a landlord. It is decent shelter for a growing family; it is healing comfort for sore distressed souls flirting with the mad theories of revolution; it is proper breathing-space for human beings; it is domestic sanitation and defiance to disease; it is opportunity for a woman to reach her highest achievement, the creation of a home; it is healthy children, a contented hearth-stone, a sure anchor against all the squalls and tempests of social unrest.

When rent stands at the door of the home and warns all but the wealthy away, it is a far more savage menace to the economic sanity of the community than a thousand "Red" emissaries. But when rent writes "Welcome" on the doormat, it weaves a spell before the portal which no Bolshevik folly can pass.

Who fixes the rent?

The men who build houses. When there are plenty of houses, rents fall for the same reason that eggs get cheaper in the spring. When building stops, rents go up automatically for the same reason that food does in a beleaguered city. People can no more do without houses than they can without food. If the price of clothing soars too high, we can wear our old clothes; but we can neither re-eat the meals of last year nor house ourselves over again on the rent we paid before the war.

Who are the men who build houses? Mr. J. B. Carswell, of Toronto, told the "Building Industries Parliament" yesterday that eighty per cent. of the cost of building is labor. The rest is profit and material. Mr. Carswell put the actual value of material at five per cent. That is, the building of a home is accomplished by a triple alliance of workers, capitalists and Providence. Of these three, the workers contribute eight parts out of every ten.

Rent is Only Interest on the Cost

We leave the answer to you: Who builds houses? Obviously labor is the house-builder. Labor gets eight dollars out of every ten which is required to build a house. Rent is only interest on the cost, and will fall inevitably as the cost falls. Even if capital and organization took nothing for their services—which they have never showed any disposition to do—still eighty-five per cent. of the cost, and its resultant rent, would remain absolutely untouched—unless labor relented.

What is the position of labor to-day?

Hon. G. D. Robertson, Minister of Labor, stated in his opening address at the Ottawa Conference that on May Day there were approximately 100,000 less men employed in Canada than there were last New Year's. And this in spite of the arrival of the spring. Mr. Tom Moore, President of the Canadian Trades and Labor Congress, makes the appalling statement that twenty-five per cent. of Canada's workers are idle.

Coincident with this is the cruel fact that these same workingmen, or their brothers, are finding it much harder to get decent homes in which to house their families. Rents are mounting while opportunities to earn the old wages are declining. No wonder that discontent spreads.

What is the cure? Obviously to build more houses. That would give work to the workless, and homes to the homeless. The workingman would earn more; and would also keep more of his earnings, for he would be asked for less of them as rent. His net gain would be very considerable. Of course, the majority of workingmen do not labor at housebuilding; but every intelligent workingman knows that an increased demand for labor of any sort relieves the disquieting pressure of unemployment on all other forms of labor and tends to keep wages up.

Keeping Up the Standard of Living

Mr. John Bruce, a representative of the labor group at the conference, declared that "Labor was opposed not so much to wage reductions as to reductions in the standard of living." This is a highly intelligent attitude. Money is only worth what it will bring in the means of livelihood. It is useless to get nominally high wages if the purchasing power of these high wages is no higher than was that of the previous lower pay. The German is not enriched by stuffing his pay envelope with depreciated marks. In the last analysis, the working man is paid in food, clothes and rent. To reduce his rent is equivalent to raising his pay.

But the glorious situation to-day in Canada is that he can reduce his own rent by building more houses. That is, he can raise his own pay, and "the bosses be blowed!" At present, he is actually reducing his own pay by building conspicuously fewer houses. Mr. J. M. Piggott, of Hamilton, reported to the Conference that "the building industry to-day is practically flat on its back. For March, 1921, contracts let for building totalled only $36,800,000 in Canada, as against $55,700,000 last year. Construction contracts all over Canada in the three months of 1921 were 35 per cent. lower than the same three months last year. The heaviest falling off was during March, when the building outlook should be at its rosiest."

How Long Will High Cost Continue?

"But," the bricklayer, carpenter et al, might conceivably reply, "we are ready to work. It is the contractor and the capitalist who will not undertake to build." Precisely. And why not? Because they believe that the present high cost of building cannot last. They argue, and surely with reason, that if they build while the cost is artificially inflated, they must get an inflated rental to make it pay. But three years hence, some more cautious contractor will build across the street a better house for less money and rent it at a figure which will ruin them. So they feel under compulsion to wait.

Cut the cost now and they will build now. Who can best cut the cost? "Providence" which contributes only five per cent. of it in raw material? The capitalist and the contractor, who get only fifteen per cent. all round, counting the brick works, the cement works, the mills and every industry interested, as well as the actual building? Or the workingman who controls eighty per cent.?

Surely so plain a proposition will appeal to the thinking worker. He can give himself a paying job and at the same time reduce his rent and the cost of everything else into which rent enters, thus keeping up his standard of living which is all he wants, by simply plunging at possible and conceivably permanent wages into the genuinely emergency task of building the homes for which we are all clamoring.

Personal Paragraphs of Interest

R. D. Messier, wholesale lumberman, Montreal, was in Toronto recently calling upon the trade.

J. P. Dupuis, of the Dupuis Lumber Co., Limited, has been elected a member of the committee of the Chambre de Construction de Montreal, a new organization of French Canadian contractors.

J. N. Huff, who operates a well-equipped sawmill at Wilberforce, Ont., on the old I. B. & O. Railway line, and will saw considerable birch and maple this season, was in Toronto recently calling on the trade.

J. L. Campbell of Campbell, Welsh & Paynes, wholesale lumbermen, Toronto, who has been spending the past few weeks on a pleasure trip to the Old Country, has returned home. He thoroughly enjoyed his outing.

L. J. Linton, sales manager of Terry & Gordon, Limited, Toronto, recently spent a few days in Montreal, calling on the trade, with J. E. Green, the Montreal representative of the company. The company now have offices at 308 Coristine Building, Montreal.

Guy H. Long, of the Long Lumber Co., Hamilton, accompanied by Mrs. Long, left on May 30th for New York City, from which port he sailed on the steamer "Cameronia" for Edinburgh. Mr. and Mrs. Long expect to tour the continent and will return about September 1st.

Lieut.-Col. R. M. Beckett, of Dobell, Beckett & Co., Quebec, who recently returned from a business trip to England, spent a few days in Toronto last week, calling upon the trade. Col. Beckett was lumber purchasing agent for the British Government at Washington during the war.

Archibald Yuill, formerly superintendent of the Marshay Lumber Co., has bought John Dickson's interest in the Haight & Dickson Lumber Co., Limited, Sudbury, Ont., and is in charge of their mill at Mile 93, C.N.R., which started operations about a month ago. John Dickson, late of Haight & Dickson, has acquired interest in the planing mill operation of the Empire Coal & Lumber Co. of Sudbury, and is operating the same under the style of "John Dickson & Co."

Another Lumberman Joins Ranks of Benedicts

John Robertson Carter, son of W. W. Carter, president of the Fesserton Timber Co., Limited, wholesale lumbermen, Toronto, has joined the ranks of the Benedicts. He was married to Miss Anne, youngest daughter of Mr. and Mrs. Oliver J. Snell, Triller Ave., in Dunn Ave. Methodist Church, Toronto, on May 21st., Rev. Dr. Young performing the ceremony. Mr. Carter and bride left immediately on an extended honeymoon trip to Buffalo, New York and Washington.

Mr. Carter, who is one of the most popular and genial representatives of the younger ranks in the lumber industry, has been for several years credit man with the Fesserton Timber Co., of which organization he is also a director. Previous to his marriage the staff presented him with a set of solid silver candlesticks and an appreciative address. The numerous friends of Mr. Carter will wish him and his bride every happiness, success and prosperity.

The Collection of the Sales Tax

The correspondence on the sales tax between Mr. H. C. Beatty, the Secretary of the Montreal Lumber Association, and Mr. R. W. Breadner, Commissioner of Taxation, is published.

Lumber, under the Budget resolutions, is treated differently from other commodities, the separate schedule providing for a total sales tax of 3 per cent. The question arose as to whether the tax payable by the lumber manufacturer could be passed on to the wholesaler. In some instances the manufacturer has added the tax to the invoice.

The Department, it will be noticed, has given a ruling on this point to the effect that it is a matter of contract. On May 16th, Mr. Beatty wrote to Mr. Breadner as under:

"The following transaction will illustrate the question which this Association wishes to know: supposing "X" a wholesale lumber dealer contracts with "Y," a manufacturer of lumber for one million feet at $40.00 per 1000 ft., and nothing is said or written about the Sales Tax in making the contract. "Y" makes out the invoices to "X" for $40,000 and adds thereto $1,200, being the 3% Sales Tax. Could "Y" legally compel "X" to pay the Sales Tax of $1,200?"

Mr. Breadner's reply was dated May 16—it reads:

"In reply to your letter of the 13th inst. I may state that under the resolutions the Canadian manufacturer of lumber must account for the tax to the Department of Customs and Inland Revenue. As to whether the manufacturer can collect same from the wholesaler is entirely a question of contract between the interested parties."

The subject was discussed at a meeting of the Montreal Lumber Association on May 18. A majority of the speakers expressed satisfaction at the resolution contained in the Budget whereby manufacturers of lumber are charged 3% sales tax, manufacturers having the option of absorbing the charge or of passing it on to wholesalers. It was pointed out that the sales tax on lumber differs from that on other commodities in that no excise tax is payable on re-sales.

Another Veteran Lumberman Crosses Over

Thomas E. Fee, one of the older generation of lumbermen in the province of Quebec, died in Montreal on May 7, after an illness of six weeks. Mr. Fee, who was seventy-two years of age, was born in South Durham, P.Q., where during his earlier business life he carried on business as a lumber manufacturer, in conjunction with the late Mr. C. Church, under the name of Church and Fee. Later this business was known as Church, Mitchell and Fee, and on the death of Mr. C. Church, it was incorporated under the title of Church and Fee, Limited, manufacturers and wholesalers, with an office in Montreal.

The sawmills, limits, etc., were afterwards sold to the Riordon Company, and Mr. Fee started, with his sons, the firm of T. E. Fee and Sons, Montreal. Mr. G. H. Church and Mr. J. E. Church, sons of the late Mr. C. Church, also started business as Church & Church, Limited, Montreal.

The late Mr. Fee made his own way in life, and at one period did a very large trade, particularly in New Brunswick shingles. He was of a very quiet disposition, and did not take any prominent part in public affairs, although he was interested in a number of charitable institutions. Mr. Emerson Fee, one of his sons, is connected with the St. Hyacinthe Lumber Company, and Mr. Elston Fee, the other son, was associated with his father in business. The late Mr. Fee was buried at South Durham.

New Lumber Company Will Start Mill

The McCraney Lumber Co. of Hamilton was recently granted a charter and has secured the township of McCraney, situated east of Scotia Junction on the old Canada Atlantic Railway. The company is arranging to have a mill at Mileage 328, which will be known as "Round Lake." The cut will be principally hardwood, and it is expected that about 2,000,000 feet per year will be taken out. Operations have already commenced for clearing the mill site, which is said to be in the finest birch territory known in Canada.

Guy H. Long is the president of the McCraney Lumber Co.; Peter Duff, vice-president; A. E. Graydon, secretary-treasurer; F. R. Burton and J. McManus, directors. Mr. Duff is an able bush lumberman and Mr. Graydon is a practical sawmill man, while Mr. Long and Mr. Burton are associated with the Long Lumber Co., Hamilton, and are widely known in the wholesale lumber ranks. The capital stock of the new company is $40,000.

May Bring in Coast Stock by Water

The Canadian Deep Waterways and Power Association reports that a scheme is now under way by which British Columbia lumber may be brought to Toronto all the way by water at a cost of $10 per 1,000 feet less than the cost by rail. At the present time one man is bringing two cargoes of lumber from B.C., via the Pacific, Panama Canal and St. Lawrence to Montreal for $20 per 1,000 feet board measure, or several dollars less than the cost if it were brought by rail. This same man estimates that he can bring the lumber to Toronto, if he can secure the necessary barges, at from $10 to $15 per 1,000 feet less than it would cost by rail. If the St. Lawrence were deepened the large ships could come from British Columbia all the way to Toronto.

Interesting Experiment in Making Ties

An experiment in tie-making is being carried out at the saw mills of the Indian Lake Company at Osaquan, near Ignace, Ont., where some fine birch timber has been brought in and has been sawn into ties, which are to be treated with creosote to preserve them from rotting and utilized on the Canadian Pacific railway tracks. This is believed to be the first attempt that has been made to make use of the native birch wood for ties, and J. J. Horn, superintendent of the company at Kenora, is said to be much interested in the outcome of the experiment.

Large Aeroplanes for Forest Protection

The district of Quebec was as usual the scene of spring forest fires in the counties of Beauce, Montmagny, Bellechase, Lake St. John and St. Maurice forest regions, which, however, were got under control by the Forest Protective Association before much damage was done. This association is now well and efficiently organized, and is doing excellent work. The forest branch of the Lands and Forest Department is now engaged in organization and its aeroplane forest protective and survey service will soon be in active operation. New aerodromes are being built at Roberville and the department is acquiring larger and more powerful aeroplanes for the service.

Breezy News From Down East

The much dreaded forest fires have again made an appearance in the valuable timber lands of the province of New Brunswick. The first outbreak took place during an exceptionally dry spell recently. Fires were reported from timber lands nine miles from the Fleming Lumber Company's mills at Glassville, Carleton County; Mount Hope, Penniac; Porter Brook, near Boiestown; along the Nashwaak River; also from Madawaska and Victoria counties. Despite the activities of Chief Forester Prince and his scores of rangers the work of stamping out this menace seems almost beyond human power.

Mr. Prince, provincial forester, recently returned from Plaster Rock where he had been in connection with the establishment of a new lookout tower. It is said that two thousand square miles of timber lands can be viewed from this tower and a number of fires have already been observed from it. Seymour Trafton has been placed in charge of it. There is another lookout tower at Mount Hope, Penniac, which has reported a number of small fires.

Until recent rains, the conditions in this province were very serious. The entire country was very dry. In order to protect the forests an order was issued forbidding the issue of permits for slash burning and this measure has met with no small degree of public approval. The recent heavy rains are said to have extinguished the majority of the fires although there is fear that some of the more serious ones may spring up again.

* * *

A large sale of timber lands in the province of Nova Scotia has been reported within the last few days. The Fraser Company of New Brunswick have disposed of 50,000 acres to the Nova Scotia Timber Land Co., Ltd., in Yarmouth and Digby Counties. Ralph P. Bell, who announced the sale, said that the price involved several hundred thousand dollars. The lands sold were formerly known as the Dickie and McGrath properties.

* * *

The Miramichi Lumber Company, Ltd., was recently incorporated with head office at Boiestown and capital stock of $1,000,000. The company is given power to carry on a general lumbering business in the province.

* * *

The price of pulp wood in this province has taken a surprising slump within the last year. To-day buyers are offering $8 a cord, while last year at this time the demand was quite heavy at $22. It is reported that the majority of the pulp mills are overloaded with pulp wood bought at a high figure and they intend to unload before securing further supplies.

* * *

Reports reaching St. John from points in Maine are to the effect that the lumber situation there is showing a trend toward a return to normal conditions, but the movement is exceedingly slow and the improvement so slight that it cannot be followed from day to day. At the present time, they report, that there is no market for lumber and the tendency is for the companies to tie-up their cuts of logs. This condition is expected to prevail throughout the summer at least. Like New Brunswick, many mills are entirely closed and those in operation are only working about half their usual strength. Labor is reported plentiful, which is also true in New Brunswick. The men on the drives have been forced to accept $3 and $3.50 a day instead of $5 and $6, which was paid last season. Cutters have been reduced from $3 to $2 and in some instances even lower.

New Factory for Sectional House Work

Watt Milling & Feed Co., Limited, Toronto, have just completed a two-storey frame factory, 40 ft. x 110 ft. This was built to take care of the sectional house contract recently entered into with the W. E. Harris Mfg. Co. The material for these houses will be milled in their plant and carried to the new assembling building by an overhead carrier system. Here the different sections will be nailed up in forms, so as to insure uniformity. Several new machines were added in the shape of a horizontal boring machine and a Cowan variety saw, to take care of this work. These were supplied by the A. R. Williams Machinery Co., Toronto. If the demand warrants it, they can turn out 25 houses per week.

"From Tree to Trade"

The recent publication of The Long-Bell Lumber Company, "From Tree to Trade," is meeting with favorable comment among lumbermen and already thousands of copies have been distributed. The book was published to acquaint lumber dealers, architects, engineers, schools and libraries with methods of modern lumber manufacture—and the response so far has indicated an unusual interest in the contents of the book.

The volume is an authoritative, lucid exposition of present-day lumber manufacture on a large scale—of greater importance and interest to the lumberman than to any other reader.

The introduction is a resume of the lumber industry in America, and states that the manufacture of lumber has attained the rank of the second largest manufacturing industry on the American continent because of the importance of forest products in every activity of daily life.

There are 109 illustrations. The evolution of a tree from forest to the finished product is shown in all the intermediate steps. The book is calculated to give the retail lumberman a perspective of the vastness of the industry of which he is a part. Any lumberman desiring a copy of this book should address The Long-Bell Lumber Company, Kansas City, Mo. There is no charge for it.

Late News Jottings in Brief Shape

A new pulp mill will be erected in Prince Rupert, B.C. H. P. Crowell and J. P. Leland of Dayton, Ohio, were recently in that city laying out ground for the industry.

Wireless telephones will be installed on seaplanes used for forestry patrols during the coming summer, according to officials of the British Columbia Provincial Forestry Department.

The shingle mill of the Joseph Chew Lumber Co., Sixth Ave. and Laurel St., Vancouver, was recently damaged by fire to the extent of $25,000. The blaze is believed to have been caused through friction of the main driving belt.

W. E. Harris Mfg. Co., Toronto, manufacturers of sectional houses, have contracted with the Watt Milling & Feed Co. for a steady supply of sectional houses. It is anticipated that this business will resume large proportions.

The wage scale of the Pacific Mills at Ocean Falls has been cut and is now equal to that of eastern mills. L. S. Burden, resident manager, and Wm. Sheahan, superintendent of the plant, have gone on an extended visit to the different paper mills in Canada and the United States and will be absent a couple of months.

$20,000 has been set aside for airplane forestry service in British Columbia. The province will use airplanes to fight forest fires. First of all the planes will be used for locating the exact position of a fire and will then be employed for rushing fire fighters, power pumps and supplies to the scene. The valuable timber belts on Vancouver Island will be among the first to be safe-guarded by aerial patrol.

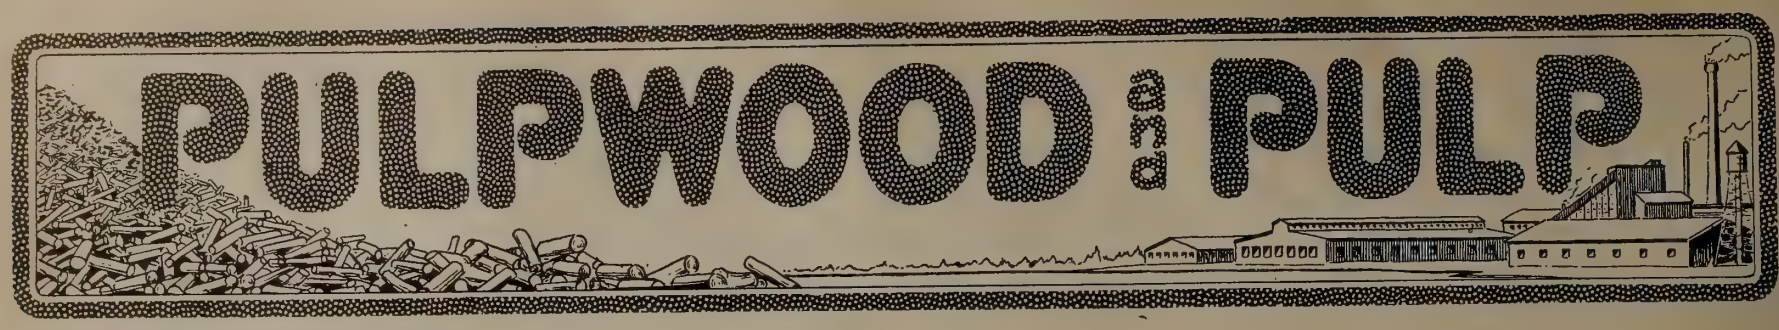
The Shuniah Pulp Co. of Port Arthur has applied for incorporation. This company some time ago acquired the Port Arthur Wagon Works' buildings and site and among those interested in the new organization are John Stirrett, Port Arthur. F. T. Barnett, representing a large financial house in Chicago, was in Port Arthur recently taking a preliminary investigation in regard to what steps in connection with the development of the pulp company would be taken.

Ellwood Wilson, chief forester of the Laurentide Co., Grand Mere, Que., blames the Canadian National Railways for a number of fires that have visited the forests in the vicinity of Proulxville and St. Narcisse, Que. The flames have been raging for some time and threatening the homes of many settlers and farmers. Mr. Wilson states that the fire started owing to sparks from locomotives and also to section men setting fire to grass along the right-of-way and burning old railway ties.

H. R. McMillan Export Co. of Vancouver, have just closed an order for 3,500,000 feet of railway ties for delivery to Nushang, China, in June. The order will go forward on the C.G.M.M. steamer "Canadian Highlander," loading at Vancouver. The vessel has about 1,500,000 feet of lumber to deliver in addition to the ties. It is stated that the export lumber trade of British Columbia is not as bright as producers hope, but there is some activity, and the inquiries indicate good promise for the future.

In the opinion of the Hon. P. J. Paradis, member of the Quebec Legislative Council, who has just returned from Europe, the lumber business in Canada will materially benefit when the German indemnity is paid. There are, he stated, millions of feet of Canadian lumber in England which the French want, but cannot purchase because of lack of funds. The French Government has promised to buy this as soon as the money is forthcoming and the result will be greatly increased orders from this country.

The new pulp plant of the Nipigon Fibre & Paper Co. began operations at Nipigon recently and is running to capacity. It will turn out 100 tons of groundwood daily. James A. Little of Port Arthur is president of the company, and the plant is situated on the famous Nipigon River, and on both the C.N. and C.P. Railways with siding into the mill. The industry is equipped with twelve, 3-pocket grinders, which are operated in tandems of 2 x 1000 h.p. motors for each set, giving plenty of power and steady running. Over 1,500,000 acres of fine spruce pulp land in Ontario is controlled by the company.



Heavy Pulp Cut in Cape Breton

American pulpwood interests will take more pulp from Cape Breton during the present year than ever before, according to reliable information. During the past three months representatives of American Pulpwood companies have secured contracts in Cape Breton for the delivery of large shipments of pulp. Already these companies are operating at Christmas Island and Big Beach. They are preparing to extend the operations to the north side of East Bay and St. Peters. Later they will cut pulpwood on the Bras d'Or Lakes and the Mira River. The pulpwood is being transported to the United States by water, the operators being able to ship by deep water transportation from any point on the Bras d'Or Lakes to the Atlantic ports. The cheapness of water transportation and the high rail freight rates have caused the operators to turn to Cape Breton for pulp this year.

Southern Pine, Red Gum to Make Paper

As the outcome of some intensive research work by the Forest Products Laboratory at Madison, Wis., the southern forests of loblolly pine and red gum may be called upon to supply the paper needs of the country in the next few years. The former of these woods is excellent for the making of wrapping papers, its long fibre fitting it for the purpose admirably. However, all species of pine are rich in resin, which is very difficult to bleach out. For this reason they have not heretofore been considered as practicable sources of white-paper pulp. The recently evolved process has changed this, and has demonstrated that one cord each of loblolly pine and red gum will produce one ton of good-quality white paper. It is said that the cost will permit the new papers to compete in price with those made of spruce.

Price Bros. Activities Show Big Profit

An interesting statement covering four months from the beginning of November to the end of February has been issued by Price Bros. & Co. of Quebec, showing that large profits were made during that period. The showing cannot, however, be accepted as a criterion of what the company will earn for the rest of their fiscal year, owing to the fact that unusually high prices prevailed in newsprint during December, January and February. The rate was $130.00 a ton, and early this spring a reduction of $110.00 a ton took place. The big price, however, obtained during the months referred to, showed itself in profits which amounted to $1,135,450, against $2,055,782 for the full year ended February 1920. After necessary deductions the balance available for common dividends was $993,458, or equal to 2.32 per cent. for the four mouths and 6.96 for the full year. Since February 28, however, the price of newsprint has been reduced to 5½ cents per pound, or from $130 to $110 per ton. It is not understood, therefore, that the result of the current year will show up as well, unless reductions in cost of operation are correspondingly shown.

The liquid position of the company is strong at $3,780,183. Fixed assets are higher by $28,000,000, inventories are up $400,000, the cash item is unchanged, but an item of $750,000 Victory bonds in the 1920 statement is missing, being replaced by advances of $842,947. Bank loans are reduced; accounts payable are up to 1½ millions.

Big Pulpwood Shipments to Holland

It is understood that a large contract was recently closed for the export of pulpwood from Canada to Holland, and that shipments will be made monthly at the rate of 600,000 cords per annum. It is said the entire contract is for 6,000,000 cords, spread over a number of years.

The Government of Holland has been in the market for some time past for an adequate supply of pulp wood, but it was only a short time ago that negotiations took definite shape. Shipment of the wood, it is stated, will commence in the near future. It is reported that the Holland-America Steamship Company has been closely identified with the negotiation.

Details of the plan are not yet available, the Canadian parties refusing to make any statements concerning the matter, although admitting the veracity of the rumor.

The importance of the contract to Canada, however, must not be under-estimated. It is one of the most interesting developments in the export of pulp wood from the Dominion ever brought about. Heretofore Europe has been able to take care of her own forestry materials. It would now seem that the war has brought about even greater changes in the European situation than most people can imagine.

Sending Shipments of Pulp Overseas

Information received from the Saguenay Pulp & Power Co. indicates a more favorable condition than exists for the majority of pulp producers. While practically all contracts with United States customers for pulp were cancelled, the English mills continue to accept groundwood pulp at the contract price of $62.50 a ton, a proceeding that takes on more meaning when it is recalled that the current price is $35 to $40 a ton. This contract covers about 300 tons a day. The sulphite mill, at Chandler, is not shipping pulp and some thousands of tons have accumulated, awaiting more favorable market conditions.

Preservation of Canadian Pulp Urged

I have recently read remarks by an American Paper Manufacturer, who is, quite naturally, selfishly interested, regarding the proposed Canadian embargo against the export from Canada of pulpwood for the United States Mills. I note that the advocacy of such an embargo by Canada is described as "propaganda of men striving to serve personal ends," and from "selfish interests." But it seems to me that the selfishness is entirely on the other side, when the American mills want to deprive the Canadian pulp and paper manufacturer of his raw material, says F. J. D. Barnjum , of Annapolis Royal, N.S.

If wood were being shipped from the United States to supply the Canadian mills how long do you think it would be before some action would be taken along these same lines?

Canada is in a much worse plight so far as her available supply of standing timber is concerned than is the United States. So far as my own personal ends or selfish interests are oncerned, my mills in Canada have the largest supply of standing wood, based on their capacity, of any pulp mills in the world, all of which land is owned in fee, with the wood now exportable to the United States. Consequently, I cannot be accused of selfish interests in supporting an embargo or export tax of pulpwood.

I am perfectly willing to acknowledge that the situation with regard to a supply of raw material for the mills on both sides of the line is critical, and, as a matter of fact, sulphite pulp, at least, should even now be manufactured out of some annual crop instead of trees, even though the quality would be inferior, and the cost much greater. We need what standing wood supply now remains for the building of homes and uses for which there is no substitute for wood.

I note it is stated that Alaska can furnish perpetually one-third of the print paper consumption in the United States, but when we consider that paper uses only about three per cent. of the total amount of wood consumed annually in the United States, one-third of this would be merely one per cent. of our total consumption, so we might as well forget Alaska. Furthermore, as a matter of fact, when Alaskan wood is used to any extent it will not be reserved for paper alone, but will be used for all other purposes for which wood is required. And, when you consider that the entire supply in the Alaska National Forests would last the United States for all purposes only a matter of about one year, it will be readily seen that we are only raising a false hope in counting upon Alaska for a future paper supply.

Some idea of the enormous consumption of wood and timber in the United States can be gained from the fact that if their entire supply were drawn from Canada alone, the total available Canadian supply would last the United States only about six years.

The present temporary surplus of pulpwood and lumber was simply brought about by the high prices of 1920, which enabled the lumbermen to operate in the remote sections that contain our present remaining supply. As soon as business returns to normal, this apparent surplus will very soon vanish and will not be replaced until prices become sufficiently high so that the lumberman can again pay for the long hauls. In proof of this assertion, lumber is being

sold at the present time at an actual loss of $15 to $20 per thousand feet, and pulpwood in about the same proportion.

This shortage of standing timber is world-wide, so we cannot look to other countries for supplies. As soon as business resumes anything like normal proportions there will be a sad awakening for our pulp and paper mills in so far as their supply of raw material is concerned; and that is why I say these mills should begin even now to use some annual crop as a substitute, at least for their sulphite pulp.

When such authorities as Senator W. C. Edwards of Ottawa, one of the best posted lumbermen of Canada, state that the standing supply in Eastern Canada will be exhausted in about twelve years, and R. W. Hibberson of the well-known timber cruising firm of Hibberson Brothers of Victoria, British Columbia, advises us that even British Columbia will be facing a timber famine within fifteen years, surely the time has arrived for some immediate action towards the retaining of our remaining supply for our home industries.

Good Showing Made by Pulp Concern

The net profits of the Mattagami Pulp and Paper Company for the seven months ending December 31 amounted to $1.091,779, from which the sum of $187,423 has been deducted for interest on bonds, debentures and bank loans. The net earnings after allowing for interest and depreciation amount to $534,421.

Duncan Chisholm, of Toronto, the president, says: "Due to the necessity of carrying on construction at Smooth Rock Falls, Ont., during the year and the handicap of high labor and material costs, your company was unable to participate fully in the extremely profitable markets prevailing during the summer months. The operations for the year, however, have resulted in a substantial profit, and by utilizing same your directors have been able to place your company in a most efficient operating position, with inventories, logging operations, etc., written into the balance sheet at most conservative figures, both as regards quantities and unit costs."

Working Wonders in Quebec Forests

The forestry branch of the Quebec Lands and Forest Department has wrought wonders within the last few years for the protection of Quebec. Mr. A. Bedard, assistant superintendent of this branch, is a tireless worker in the study of means for protection of the provincial forests. These days he is giving a great deal of attention to the fungus that has followed the budworm and creating great havoc among the balsam trees.

Discussing the budworm and other insects that have attacked the forest resources of the entire continent of North America, with the Quebec correspondent of the "Canada Lumberman," Mr. Bedard, referred to the devastation of the spruce and balsam trees by the budworm, and said: "This insect, which first made its appearance in the forests of British Columbia in 1909, and when it was reported the late Gordon Hewitt, Entomologist of the Dominion Department of Agriculture, went to British Columbia to investigate the insect that was destroying all the Douglas fir on Vancouver Island, and then made its way by migration to Eastern Canada. The attention of the department was first called to the insect by Hon. W. C. Edwards, who discovered its presence and attack upon the spruce trees in 1910. It invaded Eastern Canada like a swarm of winged insects, and like the moth, was to be seen fluttering around the street electric lamps until it finally reached the forests to commence its deadly work of destruction. It reached Quebec in 1911 and found its way throughout the entire Lake St. John district and also along the boundaries of Compton and Maine, and attacked both the spruce and the balsam trees. It did not, however, cause as much damage to the spruce as it did to the balsam as the former had a stronger resistence to the attack than the latter and the damage done is incalculable.

At first the budworm attacked the tops of the trees on the summit of the mountains, and in 1911 laid their eggs which next year developed into swarms of the live insect that spread in every direction in their attacks on the forests. This insect only lasted three years, when it was followed by its parasite, a species of fly. In the meantime Dr. Swain, who was following up the pest, came to Quebec, and advocated the burning of all the debris from debilatated trees that had fallen a victim to the insect's attack. The damage done was so extensive among the balsam trees that many limit holders engaged in the cutting of pulpwood started in to cut down the balsam and burn the debris on account of the fungus pest that followed. Price Bros. cut 85 per cent. of balsam against 15 per cent. of spruce.

The debility of the balsam tree made it an easy prey to the fungus which is now spreading rapidly, and the department is fighting it and sending notices to all limit holders to burn without delay all debris from the debilitating trees as quickly as possible to destroy the fungus pest, and the department is carrying on this work in the Crown Lands.

The budworm is analogous to the larch sawfly which some years previously destroyed and killed all the red spruce in Canada. Another disease which has given the forestry department in the United States food for much concern is the white pine blister, which threatens the destruction of all the white pine and other fine-leaved pine trees in the United States. It has attacked the forests in many states and has appeared in Ontario and Quebec.

There is no known cure for it. It kills the white pines infected and spreads steadily.

Has Forged His Way to the Forefront

George M. McKee, Donnacona, Que.

George M. McKee, who is managing-director of the Donnacona Paper Co., Donnacona, is widely known not only in pulp and paper circles but in the lumbering arena as well. Although he has resided in Canada for a comparatively short period, the esteem in which he is held by his confreres was evidenced at the last annual meeting of the Canadian Pulp & Paper Association, when he was elected vice-president of that important body.

Mr. McKee was born in Lewiston, Pa., in 1871 and was educated at the public schools and the Pennsylvania State College. His first indentification with the paper industry was with the Friend Paper Co. of West Carrollton, Ohio, in 1897 and 98, after which he became general manager of the Hinckley Fibre Co. of Hinckley, N.Y., where he remained for four years. In 1912 he organized the Donnacona Paper Co. and purchased the property of that organization, becoming its managing-director. He has directed the business ably and efficiently. The plant has a newsprint output of 100 tons daily, 60 tons of sulphite and 120 tons of groundwood.

Strike Going on in Pulp and Paper Plants

The strike in the various pulp and paper mills in Canada, which started last month, continues with seemingly no immediate prospect of settlement except in two or three plants.

The strike of the paper makers at the E. B. Eddy Company's mills in Hull, which began three weeks ago and resulted in nearly 400 of the employees being out of work, has come to an end. The paper makers returned to the machines under the same conditions and at the same rates of pay which prevailed prior to May 1st, on the understanding that if a reduction in wages is decided upon by the majority of the big mills in Canada and the United States, the reduction will go into effect in the Eddy mills. The terms are exactly the same as those agreed upon in the paper mills and other departments of the J. R. Booth Co., Ottawa. That company had proposed to put into effect a 20% reduction in wages but this drastic action was found unnecessary. Mr. Booth informed the committee from the union that the company had decided to continue the 1920 wage scale and working conditions. There is a proviso in the settlement, however, that if the conference between the mill owners and international officers of the paper union decide upon a reduced wage scale for the workers, the same conditions will have to prevail at the Booth mills. This was readily admitted by the men, who felt that if a lower scale went into effect in other plants, they could not expect to maintain the present wage.

At Espanola, Sault Ste. Marie and Sturgeon Falls, the pulp and paper mills of the Spanish River Pulp and Paper Co. closed down some time ago and about 2200 men are out of employment, refusing to take a thirty per cent cut. Espanola will feel the effects of the close-down more than the Soo or Sturgeon Falls, as the town is completely owned and operated by the Spanish River Company.

The plant of the Abitibi Power & Paper Co. at Iroquois Falls is also idle. Six hundred men are unemployed, all members of the International Union for Pulp and Paper makers. The shut-down does not interfere with construction work. It is understood that the Abitibi Company have a large stock of paper on hand as during the last two weeks in April the mills made a record output, the average being about 260 net tons of paper each day.

The mills of Price Bros. & Co., at Jonquiere and Kenogami are also closed down, and Sir Wm. Price declares that they will remain that way until the men accept the terms of the company. He asserts that he will never give in to the unions.

Second Hand Machinery & Equipment Wanted & For Sale

Quick Action Section

Special Lots Of Lumber—Positions Wanted & Vacant

Lumber Wanted

Wanted

Several cars No. 3 and culls 1" x 4 up. Maple, Birch, Beech, Elm, Spruce, Basswood or Pine. Box 571, Canada Lumberman, Toronto. 9-12

Lumber Wanted

I am open to buy spruce box lumber 13/16" thick, P.I.S., 4" up; length, 6 to 16'. Address Box 556, Canada Lumberman, Toronto. 6-13

Lath Wanted

Will buy any quantity, White Pine, Spruce or Hemlock. Please quote your best cash price f.o.b. Toronto. C. W. James Jr., 358 Greenwood Ave., Toronto. 6-13.

Pulpwood

We are open to buy a limited quantity of rough and peeled spruce and balsam pulpwood for immediate and future delivery; cash on shipment. Log Export and Import Co., 241 Beaver Hall Hill, Montreal. 8-11

Department of Lands and Forests

PROVINCE OF QUEBEC

Leasing of a Water Powers and Timber Limit

Notice is hereby given that on **Wednesday, August 3rd, 1921**, at 10:30 A.M., in the sales room of the Department of Lands and Forests, at Quebec the following will be offered on lease at public auction:

1. A Water Power site in the Outardes River, County of Saguenay of about 50,000 H.P. capacity.
2. A timber limit, 3,000 square miles in area, situated in the Outardes River watershed.

For fuller details and information, please apply to the Department of Lands and Forests, at Quebec.

HONORE MERCIER,
12-13 Minister.

TENDERS FOR PULPWOOD and TIMBER LIMIT

Tenders will be received by the undersigned up to and including the **15th day of June, 1921**, for the right to cut pulpwood and pine timber on a certain area situated on the Nagagami River and other territory adjacent thereto, in the District of Algoma.

Tenderers shall state the amount per cord on pulpwood, and per thousand feet, board measure, on pine, that they are prepared to pay as a bonus in addition to dues of 80 cents per cord for spruce and 40 cents per cord for other pulpwoods, and $2.50 per thousand feet, board measure, for pine, or such other rates as may from time to time be fixed by the Lieutenant-Governor-in-Council for the right to operate a pulp mill and a paper mill on or near the area referred to.

The successful tenderer shall be required to erect a mill or mills on or near the territory and to manufacture the wood into pulp and paper in the Province of Ontario.

Parties making tender will be required to deposit with their tender a marked cheque, payable to the Honourable the Treasurer of the Province of Ontario, for fifty thousand dollars ($50,000), which amount will be forfeited in the event of the successful tenderer not entering into agreement to carry out conditions, etc.

The said $50,000 shall remain on deposit until the pulp mill, as provided by terms and conditions of sale, is erected and in operation. Any timber cut in the meantime shall be subject to payment of dues and bonus as accounts for same are rendered. After the said pulp mill is erected and in operation the deposit of $50,000 may be applied on account of bonus dues as they accrue, but the regulation dues, as mentioned above, shall be paid in the usual manner as returns for cutting of wood and timber are received and accounts rendered.

The highest or any tender not necessarily accepted.

For particulars as to description of territory, capital to be invested, etc., apply to the undersigned.

All tenders should be enclosed in sealed envelope and marked plainly on outside, "Tender for Nagagami Pulp and Timber Limit."

BENIAH BOWMAN,
Minister of Lands and Forests.
Toronto, January 24th, 1921.

N.B.—No unauthorized publication of this notice will be paid for. e.o.i.-4-11

Bush For Sale

100 acres heavily timbered in Maple, Black Birch in Lutterworth Twp. on shore of Gull Lake.

R. FLEMING,
41 William St.,
10-13 North Lindsay, Ont.

Charities and Advertising

The Canadian Maunfacturers' Association recently brought to the attention of its members a matter which at first glance does not seem to be of a great deal of importance, but which, nevertheless, is interesting to every owner of a business. Charities and advertising are two subjects to which every retail lumber dealer necessarily has to devote quite an important portion of his time, whether he wishes it or not.

"Fake" advertising devices are amongst the chronic nuisances of modern business. Are you ever favored with a call from the glib-tongued stranger who tells you that he has one of the best propositions in the advertising line that has ever been before the public? Do you ever receive circular letters from an organization with a high sounding name you never heard of before, inviting subscriptions to some worthy object?

The Canadian Manufacturers' Association has been operating for three years past what it calls a "Bureau of Advice and Information" for dealing with these problems. Through its chain of branches and wide membership it has exceptional facilities for undertaking this class of work, and through the Bureau of Advice and Information is prepared to report fairly and fearlessly upon anything you may bring to its attention. In the aggregate the Bureau has saved and may save the manufacturers thousands of dollars.

The Association furnishes its members with cards to be hung in the office, notifying solicitors that all requests for advertising, etc., are referred for investigation to the Bureau of Advice and Information, which will save the annoyance of many personal calls by solicitors whose appeals will not bear scrutiny.

Competition of Short Leaf Yellow Pine

Retail lumber dealers who handle short leaf yellow pine are not doing themselves or their customers any good. Much better woods are to be had by retail lumber dealers in Ontario, and, considering the value and service given by these woods, they are infinitely better lines to handle and give greater value to the customer. Short leaf yellow pine is in reality a very poor wood. It will not stand exposure to moisture. It decays very quickly. Considerable quantities of short leaf yellow pine have been brought into Ontario in the past by dealers who did not give the matter the attention which it deserves. It is being offered at very low prices, but at any price it is a poor article and the sooner the retail lumber dealers in Ontario stop using it the better it will be for others and for the public.

Just at present there is an additional reason for leaving short leaf yellow pine alone, namely, the fact that the Canadian dollar is at a discount in the United States. Everybody in Canada to-day is interested in buying goods made in Canada. None of us wants to be offered eighty-five cents for our Canadian dollar. The only way to correct this is to keep our dollar at home. In connection with short leaf yellow pine, the argument is, therefore, doubly strong, because we lose on the exchange, and we offer our customers a wood which we cannot honestly recommend.

Redwood is the Best Tank Material

Dampness, moisture, mud, heat or cold has little effect on redwood. It neither rusts nor rots; there are no knots, no shrinking or swelling.

Logs of redwood that have been under water for 50 years have been found perfectly sound.

Water tanks made of redwood will last longer, painted or unpainted, than tanks constructed from any other material.

Timber From Dead Trees Good as That From Live

The prejudice held by certain builders against the use of lumber from fire or insect-killed trees has been proved groundless by recent experiments of the Forest Products Laboratory. Here it has been found that lumber cut from sound dead trees is in no way distinguishable from any other, except that it may be partly seasoned. If the wood has not been injured subsequently by decay or further insect attack this "dead" lumber is the equal of "live" of the same grade for all structural purposes.

Some of the products of hardwood lumber have not come down in price to a point where the public is willing to buy them. The manufacturers of these products must readjust their prices to a basis of replacement costs. They cannot hope, under present conditions, to get a full profit on goods already manufactured from high-priced materials and with high-priced labor.

Review of Current Trade Conditions

Ontario and the East

There is not much change in the general conditions so far as the sale of lumber is concerned. The tone of the market is distinctly quiet, although a better feeling prevails on the part of both wholesalers and retailers than was evidenced some time ago. It is felt that the worst of the depression is now over, and while the stagnant period may remain for some time, still the increasing number of building permits in the larger cities and the various housing schemes that are getting under way give evidence that 1921 will be a fair year in certain centres, and would be much better if it were not for the exactions of labor.

Sawmills in various parts of the country are now operating, although a number have been late in starting, due, it is said, to the fact that no great haste is urgent, as stocks on hand are ample to supply all requirements for some time. There is an abundance of labor and very few protests over the matter of wages. Ordinary unskilled labor around the mill and in the yards now receive from 30c to 35c an hour, whereas last year similar service was rewarded by at least 20 to 30 more.

It is not likely that the cut in any district will be as large as last year unless there should be a radical change in conditions. Wages in the bush are likely to run from $30.00 to $40.00 during the coming season, and one concern, which has been conducting a summer operation in the woods in Northern Ontario has been obtaining all the men required for $30.00 to $40.00 a month and board. Last fall wages were just double this figure.

No large mills have sold their season's cuts as yet, so far as can be learned, whereas in recent years these cuts have all been disposed of by this firm and at an annually increasing figure. A number of manufacturers are not particularly anxious to go ahead under any conditions as they claim that prices now ruling for the finished product are far below the cost of manufacture and they will have to take a loss anywhere from 5% all the way up to 25%.

In hardwoods there is very little demand on the part of woodworking and other factories, although automobile concerns are fairly busy. A number of inquiries are being received but these appear to have been sent-broadcast in the hope of getting holders of stock to bid one against the other. "Even where we do make deliveries," remarked a leading dealer in hardwoods, "our customers are very critical in the matter of grades. We find that a number of concerns have been buying cull ends at a very low figure and are now anxious to piece out what they have in hand with some of the upper ends, so that they can have all their requirements filled. The injustice of the whole thing is that some of these firms, who have been picking up scrap stocks and low ends, expect us to sell No. 1 com., selects, 1sts and 2nds at practically the same figure they paid for the inferior stuff, and are quite put out about it when we fail to do so. We have determined that we will hang on to what we have rather than create a slaughter. To try and force the market at present seems a little out of the way as until the public is convinced that values have reached their bottom, they will not do any extensive buying. This is evidenced by the fact that no "bargain prices" seem to invite closed transactions.

"How soon business will pick up it is not known, but some fellows who enter the market later on for 1st and 2nds and No. 1 Common in birch, maple and elm are going to find themselves sadly disappointed, because stocks in this line, I am creditably informed, are so scarce that with anything like a fair amount of orders, there is going to be a shortage."

Considerable lumber is being sold at the present time but those who are moving any forest products in either a wholesale or retail way declare that on old stock they are either taking a heavy loss or not making any money. Other concerns, which are low in stock, are holding back in their purchases at the present time, apparently waiting for developments that may or may not occur.

The general opinion of the trade is that lumber has reached its lowest price, and as one manufacturer stated this week, he did not think anything except an "economic revolution" could cause it to descend further. Another member of the trade remarked that wholesalers, who have been alarmed because "some weak members of the industry are being forced to unload and are peddling their stocks, are living in a fool's paradise because lumber is bound to go higher in the near future, and that the demand will reassert itself within the next few weeks."

It is of interest to lumbermen to note that the United States Railway Board has announced that prevailing conditions justify to an extent yet to be determined a readjustment downward of the wages paid to the employees of the roads. The announcement, which affects labor on practically every road in the United States, is one that will be welcomed by the lumber trade, who feel that business has been throttled for some months owing to the excessive carriage charges. Readustment is badly needed and it is declared that the employees will fight the proposed reduction.

In presenting their case, the roads pleaded that they were being forced to pay more for labor than they could employ it for in the open market; that reduction in the cost of living justified a similar reduction in wages, that they were being forced to operate in many cases at a loss, and that they wished to reduce their rates for the benefit of the public, but could not do so while forced to pay a wartime scale to labor.

Another gratifying feature of the present situation, so far as Toronto is concerned, is that building permits for the month of May exceeded $3,000,000, which is a gain over last year. The great majority of the permits taken out are for dwellings. In other cities, where no labor trouble exists, the prospects for building seem to be brighter each week.

It is also pleasing to record that the new Live Stock Arena which will be erected on the Canadian National Exhibition Grounds, Toronto, wlil be ready for the big live stock show in November next. The City Council, in awarding the contract to the Anglin-Norcross Co., of Montreal, has finally disposed of a matter which has been long hanging fire. The contract figure is $893,000 and about 1,000,000 feet of lumber and small dimension timber will be required for the flooring, studding, joists, etc.

United States

There is some slight improvement in the general business situation. While it is true that betterment is slow, still the trend is in the right direction. Readjustment is slowly being brought about through wage reduction and a deflation of values, and each move is in the direction of giving permanency to present conditions, removing the artificial and striking the roots of activity in solid soil. The buying disposition and buying public are not, however, such as to effect a return to a seller's market.

The number of inquiries from the various districts is increasing, and, while all inquiries are not translated into orders, they, at least, show an awakened interest in what is going on in the lumber trade.

As soon as the wage problem becomes a little more settled and the general decreases go into effect, there is going to be a more settled state of affairs prevailing. Unions will not be so ready to call strikes, laborers and artisans will not be so ready to walk out and both employer and employee will come to a better understanding.

The industries, as a rule, however, are calling for little forest products. Many of them have collected in moneys due them, paid what they owed to the banks with the expectation that when they desired to resume operations they could borrow it again without any trouble. Those in control of financial interests, however, are still holding tight to the purse strings and refusing accommodations except in the most urgent cases. The agricultural interests still owe large sums of money and show little inclination to pay up. Some of the money which has been contributed by the business world has been reloaned to farmers or semi-agricultural interests.

The railroads are still maintaining a hand to mouth policy so far as purchasing any lumber. Once in a while they send in a hurry-up call for a car of special northern pine stock. Some of the roads are not finding it very easy to purchase even small consignments because of the fact that they are holding back in getting out vouchers for purchases made even before the first of the year.

The retail lumbermen are carefully watching the market and keeping track of where they can get material when needed. Some of them are finding that they made a mistake by not taking on a car or two when it was proffered them because now it is obtainable only in small quantities. Northern pine stocks are far below normal and are getting badly broken each day. The new supply from the saws can only be shipped a short distance unless the buyer wants to pay heavy freight rates on green lumber.

Instead of a consistently downward trend in prices, hardwoods are beginning to show a trend the other way, especially in those items which are in most demand at present and on which the mills are short, notably upper grades in oak. Most items in gum seem to have gone down about as far as they can go, though some mills which have

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

large stocks of common on hand are attempting to move them at prices below the general level of the market. The demand for hardwoods still is far below what it should be, but there appears to be a slight increase each week and less of the inquiry is of a speculative nature. The demand for flooring is good and oak finish is in better demand.

So far as southern pine is concerned, the market is spotty, but on the whole it is contended that conditions are improving. There is a growing shortage in some grades and sizes, shipments have picked up in volume. Production has not been increased very much of late, so that the stocks at the mills are steadily growing less, and it is becoming more difficult to place mixed cars when the retail lumberman enters the market.

There is a fair demand in cypress although the call is not insistent. The season has not been favorable for rapid drying of lumber and stocks ready for shipment have not greatly increased. Output continues about on the basis of the last two or three months, somewhat below normal, but with most of the plants operating. There has been little change in hemlock, aside from some reduction in prices of lath at one or two of the principal markets. In its normal territory hemlock continues in fair demand, but, selling in competition with pine and fir, prices have reached a level that operators say is below cost of replacement. Stocks are not excessive and at some mills are reported badly broken, particularly as to longer lengths in piece stuff.

Great Britain

Business in all lines continues dull and the prospects for an immediate improvement are not very bright so long as the European situation, the coal strike and other disturbing factors remain unsettled.

It is said that prices have not yet touched bottom, and there seems to be no stability in quotations. Leading economic authorities declare that much lower prices for commodities of all sorts are necessary for the revival of business and this applies not only to the timber trade but all other lines. A stable market will result as soon as this basis is arrived at.

There are many other factors taken into consideration among them being banks and credits. The action of the British banks may have a very marked influence on the manner in which wood-importing will be carried on this season. Importers, generally speaking, after they have paid their losses and their contributions to the Chancellor of the Exchequer, will have a very much smaller amount of free capital than usual, and it may safely be said that they will have far smaller credit facilities with their bankers. The policy of the banks has lately been to refuse all credits for fresh purchases, unless the goods are actually sold. Thus the importers' opportunities for making contracts will to a great extent be limited by their ability to sell, and this will resolve itself into purchasing not for stock, but to fulfill actual orders, while the quantity of wood purchased to be put into stock must be more limited than usual. Naturally, this will cause British buyers to be extremely careful not to make any contracts until they have a fairly strong probability of selling the greater part of the goods before the time arrives for the documents to be taken up. Now, until fresh goods can be purchased, and imported at such prices as will enable them to be sold at corresponding figures to spot values now ruling, there can be little forward business. Only as the demand expands can imports be increased.

Speaking of general business recently, the "Timber Trades Journal" says that the improvement in business, if such it can be called, has been very small and due to the tremendous reductions in prices which have lately been made. In the hardwood trade, there is heard of a little more business, and quotations for fresh shipments are firmer, owing to the greatly reduced stocks in America. Unfortunately, general trade does not improve, on account of the restriction in export business, and for fifth quality wood and other common shipments from the central European countries prices are lower than ever. Orders are still of the small variety, and there is now and again a little buying for stock purposes, but scarcely any contracts, either on f.o.b. or c.i.f. terms. The general tone of the spot market is such as it was. Prices cannot be said to be any firmer, as there is a growing belief that the Finnish shippers will shortly make substantial reductions in their quotations. 3 x 9 still sell well, especially in the better-class Swedish stocks, but the reduction in the prices of narrow boards is greater than ever, owing to the heavy qualities which are placed on the market.

In the British House of Commons during the past few days, Mr. A. Davies (Clitheroe) asked the Lord Privy Seal whether he is aware that large quantities of spruce lumber in Canada, owned by the British Government, is being gathered up and piled into large lots by the Imperial Lumber Company at the various Atlantic ports for shipment to Europe; that this company is giving out contracts for the assembling of the lumber to private firms, who are hiring men at wages below the prevailing trade union rates; and whether, in view of a complaint to this effect from the American Federation of Labor, action will be taken in accordance with the spirit of the Fair Wages Resolution of this House?

The Prime Minister: So far as I am aware, the answer to the first part of the question is in the negative; the remainder, therefore, does not arise.

In regard to the spruce market, word received recently from Liverpool is to the effect that there is no change. Business continues dull, with a very limited demand. The recent auction sales do not seem to have had the effect of lowering the market to any extent, as was generally expected they would have—in fact, almost the same level of prices still holds good. Several small lots of scantling have been sold lately at better figures than were realized for the same sizes at auction.

Market Correspondence

SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD

Conditions in Ottawa Remain Practically Unchanged

General conditions in the Ottawa lumber market as affecting sales showed little or no change during the last two weeks of May as in comparison with the first part of the month. Business on the whole was dull. There were very few sales, and orders and inquiries fell away off and were in volume much below what they were a year ago.

Despite the dullness of the market there was no further falling off in prices, and in some circles it was believed that quotations would hold at their present levels for a month at least. With practically no trading going on it was next to impossible to tell what stocks would bring and all the manufacturers and wholesalers had to guide them were their price lists and the figures they asked. In making quotations the list prices were in some instances reduced, but, on the whole, were generally adhered to.

Business was not completely at a standstill, though it was very close to it, with most firms only a few odd carloads were forwarded in the two weeks' period. Orders and inquiries of all kinds, both domestic and foreign, were particularly slow for lumber, lath, and shingles. The slackness of the period presented a strong contrast to the "good business" period which it was phophesied last fall and early winter, would open up in May.

The outlook for the future of the market, lumbermen on the whole agreed, was doubtful, as there was nothing in the immediate present that they knew of, which would have a strong stimulating effect on the market and cause it a quick pick up.

Lack of building activities and the unsettled labor situation which exists among the members of the unions embraced in the building trades in many cities, were principally blamed for the small demand for lumber, and consequently a reduction in sales. The general opinion of lumbermen and builders at Ottawa was that the building public was continuing to hold off and not undertake new work, with the belief that the cost of lumber and other building materials, together with the cost of labor, would show a further reduction.

The failure of the members of the Ottawa branch of the Canadian Building and Construction Industries Association to reach a settlement with the members of the crafts embraced in the Building Trades Council, and beyond any doubt a very serious effect on the lumber market in the Capital, and resulted in much building either not being undertaken, or curtailed. The members of the Building Trades Council want last year's wages, and the contractors on the other hand have offered them approximately ten cents per hour less, which has been refusesd by the trades. Since the contractors have declared for an open shop they have stated that wages for the different trades in Montreal are less than those demanded at Ottawa, and that they can get all the labor they will need from outside points to take care of building at Ottawa.

The weak state of the market in May will undoubtedly have a very considerable bearing on the sawmill cut of Ottawa companies this year. Manufacturers, in discussing the situation, pointed out that it would be practically useless, if not foolish, for them to go ahead and cut stock, without first knowing what the demand was

going to be or what the building public and the contractors wanted. In other years they usually had a good gauge for such information in January or February. This year the whole order of things has been changed.

Again, it was referred to by manufacturers that it would not be likely be a profitable or a sound business undertaking to cut up logs and convert them into lumber until it could be seen with some degree of certainty what was going to happen in the market. The lumbermen argued this way. What is the use of cutting up the lumber that is in the logs until we know what we are going to do with it. If the lumber is in the log it can be sawn whenever the time comes to do it. Meanwhile while the lumber is in the log there is no high cost of insurance to be borne that one has to pay on sawn lumber."

Some sawmills in the Ottawa Valley operated during the latter part of May. They were. the Pembroke Lumber Company, the Gilmour and Hughson plant of the Gatineau Company, Limited, and the Hawkesbury Lumber Company.

On top of all the other difficulties that the trade had to encounter came the announcement of the imposition of a new set of taxes imposed by the 1921 budget. As affecting lumber it was at first taken that when the manufacturer paid the tax of three per cent., that the whole works was through. Latterly, however, a new phase has set in and it now rests with the Board of the Department of Customs to work out and determine the exact operation of the new tax.

At first it was believed that by the manufacturers paying the three per cent. manufacturing tax that the government would receive less than it did under the one per cent. sales tax, inasmuch, as under the former tax a carload of lumber might be sold five or six times without being unloaded and the sales tax would apply in each case. With the new tax of a straight three per cent. to the manufacturer, it was declared that on the same transaction the government would receive only three per cent. instead of five or six per cent.

Latest information, however, is that the government has still something up its sleeve for the lumbermen. In some circles it was heard that after the three per cent. had been paid by the manufacturer and the lumber had gone all the way down the line to the retailer, that if a woodworking manufacturer or a furniture manufacturer purchased it, that another three per cent. tax would be added on to it, when it was converted into the manufactured product. If this really works out the Government will get more revenue through the new tax than from the old one. Final decision in the matter had not been reached by the federal authorities at the time of writing.

Conditions with the woodworking factories did not show much change and business remained generally dull. All the plants continued to operate. Labor remained plentiful. Rail transportation continued good, and water transportation opened up during the month, but there was little shipment of lumber by the latter route owing to the slackness of the market.

The St. John Market Shows Only Limited Business

Prices remain unchanged and the demand from United States at the present is very limited. Prices for Boston random are $2.00 per M less than two weeks ago, and for narrow stock, such as 2/3, 2/4, 3/4, 2/6 would not leave over $22.00 per M on cars St. John. Cargoes even do not leave any more, as some sales have taken place at $28.00 per M for narrow short stock, delivered New York. This was not new sawn stock but was old Government stock sold to clear up a poor lot. These sales are no criterion of new sawn stock, which cannot be produced for less than $30.00 per M out of the cheapest log.

The English market shows a little demand at Manchester for 2 x 7 and 2½ x 7, which is bringing about $34.00 per M alongside ship St. John, and reasonable amounts can be sold at these figures. Freights remain unchanged both for coastwise and off shore.

Local business is fair and the factories have a normal trade for small orders for repair work. Prices of factory stock are also falling rapidly and are to-day being sold at slaughter prices.

Only two mills are running at St. John, Murray & Gregory, Limited and one of Stetson, Cutler & Co. It is uncertain at present how long these mills will run.

The St. John River Log Driving Co. have just completed their drive and have about fifteen million feet of logs to raft. This is the smallest quantity of logs they have ever had for a season's rafting.

Laths are firm at $5.00 on cars St. John and selling very freely. There are no stocks here. Shingles are also selling in fair quantities and prices are unchanged from two weeks ago.

Quebec Lumbermen Look for Brighter Local Business Soon

The lumber and timber trade in the city and district of Quebec is still in the same position of status quo as mentioned in the previous letter to the "Canada Lumberman." Judging from the outlook and opinions expressed by the experienced members of the Quebec manufacturing and export firms, these conditions are not likely to improve for several months. In regard to business with overseas markets, Mr. John J. Burstall, chief member of the well-known timber export firm of John Burstall & Co., who was the last representative of the Quebec trade to leave England for Canada, and who recently arrived in Quebec by the C.P.O.S. "Empress of Britain," confirms the statements made and previously published in the "Canada Lumberman," by Lieut. Col. R. M. Beckett, of Dobell, Beckett & Co., and Mr. John S. Levie, vice-president of W. & J. Sharples & Co. Reg., that the lumber trade in the old country is practically dead for the present, as far as business with Canada is concerned. Mr. Dobell after relating the sad conditions of the United Kingdom, due to labor troubles, said that even when the coal miners' strike is settled, it will take at least two months before business can be established with public confidence.

In the meantime the dark clouds, which seemed hovering the lumber business in Canada and the United States, appear to be moving slowly to make room for a brighter horizon. This is the opinion of Mr. Gerard Power, president of the firm of W. & J. Sharples & Co., and ex-president of the Canadian Lumbermen's Association. Mr. Power added that the trade must bear with patience the crisis that it is passing through. He does not expect to transact any business with the trade in the United Kingdom during the present season, but does feel that business looks brighter in the Canadian and American markets for the lumber trade. The home market is becoming more active and in time things will come out alright.

The British Association of Importers, who purchased from the Imperial Government the wood bought in Canada during the war are evidently endeavoring to unload this wood for $35 per M feet from storage in Canada, estimated at 130,000,000 b.m. feet. The British Importers' Association bought this wood for $35 per M feet from the war ministry, and now is willing to sell the same at a sacrifice. This is judged from the fact that Mr. Henry Peledeau recently bought 17,000,000 feet from the British Importers' Association, for which he paid $20. per M feet, and is now endeavoring to sell the same in Montreal at a margin of profit that is discriminating against the legitimate prices of lumber of the local dealers in that city. This lumber is Nova Scotian spruce and was cut in 1917, and is not comparable in quality with Quebec spruce.

Building in the city of Quebec is beginning to show a sign of more life. Mr. Leon Pinsonnault, city architect, gave out the information lately that from the 1st to the 11th of May permits had been issued for construction in the city aggregating $750,000. He said that before the end of May permits would be issued to represent $1,000,000 for new buildings in Quebec. This will be quite a contrast in comparison with the corresponding month of 1920 when no permits for new buildings were issued. Mr. Pinsonnault said that if hardware and heating installations would only come down in price, the same as painting, glazing and lumber, building in Quebec would begin to hum, but so long as hardware and heating remains at war prices with labor, people will not invest their money.

The demands made by labor in Quebec are designated as the McAdoo curse. Railway conductors and engineers are depositing $400 per month in Quebec savings banks. This is vouched for by a local bank manager to whom a freight train conductor on the C.N.R. admitted he received on an average of $22 per day under the McAdoo scale of wages, which he knew he did not earn.

Montreal Trade Moves Slowly With Fairly Firm Prices

There is a very slight improvement in the Montreal market as regards the amount of stock turned over, but prices show no sign of an upward tendency. In some instances lumber has been sold during the past fortnight at prices which are very low, even for these days. There were exceptional circumstances in these cases, but all the same they indicate that some sellers still find it imperative to liquidate stocks, almost at any price.

Wholesalers who are in a strong financial position are not inclined to sacrifice lumber and to meet the cutting of values. It is recognized that the old prices are out of the question, but the view taken is that it is wiser to hold stocks rather than dispose of them at less than replacement values.

On the whole there is a better feeling. It looks as if we have seen the worst of the depression. If the anticipations of some building contractors are justified, and construction goes ahead at a great pace, there should be a considerable impetus to buying and a rise in values.

Reports from the woodworking factories indicate that they have many orders on hand, and that there will be sufficient work to keep them busy for a very considerable time. The contracts are not large in point of size, but are very numerous.

So far a very small amount of lumber has been shipped to the United Kingdom. This consists of pine and hardwoods. The prospect is that the season will not be busy. The condition of the United

Contract Record and Engineering Review

349 West Adelalde Street, Toronto

Kingdom markets do not encourage shipments, especially of spruce.

The Bricklayers' Unions have decided to accept a reduction of 10 per cent., with a view, they state, to stimulate building. As a matter of fact, this lower scale for all building trades has been in effect for several weeks, the principal contractors having agreed on a schedule which was 10 per cent. lower than last year. Although several important buildings are held up, there is a very large number of residences being constructed.

The citizens have decided to revert to the ward and committee plan of government. This has a certain, although indirect, interest for the lumber trade. The ward system proved years ago a prolific source of extravagance and wire-pulling and detrimental to the interests of the city. But the public has a short memory, and will once more try a discredited plan. Good civic government invites the confidence of investors—men who are prepared to spend money on residences and factories, thus directly benefiting the lumber trade. On the other hand, the ward system has been, in the past, productive of useless expenditure and heavy taxation—which are not calculated to inspire the outlay of money on building prospects.

Halifax Lumber Interests Pursuing Policy of Caution

It is difficult to find anyone engaged in the lumber business particularly elated over present conditions of the trade or future prospects. The past six months has been a very trying time for manufacturers, wholesalers and retailers alike, and all connected with the industry still pursue a policy of extreme caution.

The British market has not yet shown any disposition to recover from the apathetic state into which it subsided early last year. Stocks of Lower Port spruce stored at Liverpool and Manchester, are still abnormally high, and can only be liquidated at a very great loss to the owners. This is due in a large measure to the tremendous drop in freight from 300 s. per standard, which was the levy in effect at the time when the great bulk of this stock was shipped, to 100 s. which is the rate asked for liner space at the present time. A further drop in the freight rate will produce a corresponding decrease in the value of stored stocks, other things remaining the same. Shipments during the month of April amounted to less than 1,000 Stds., and there is nothing that would indicate that the volume would be increased during the current month. Recent auction sales at Liverpool and Manchester have been poorly attended and low prices realized. The uncertainty as to the disposition of the Government Stocks still overlying in this country discourages the British importer from buying except for immediate needs. Several cargoes of Government deals were shipped overseas during the Month of April, from New Brunswick Ports, and others are being loaded for May shipment.

The American market is the one that is engaging the attention of shippers more than any other at the present time, because it is felt that this market will influence the trend of near future prices for ordinary Nova Scotia and New Brunswick lumber to a greater extent than any other. Earlier in the year there was some little volume of dry stock that had been carried over the winter, shipped to the United States by rail. The present Railway traffic renders rail shipment prohibitive for green lumber, particularly from Nova Scotia, consequently rail shipments have practically reached the vanishing point, and all are agreed that they can only be resumed when the railways reduce their charges in line with the fall in the price of all other commodities.

Since the beginning of April there has been a decided increase in the volume of cargoes to New England ports. These have been for the most part random spruce. The demand has not been by any means active, nor have prices been attractive, but it is the general opinion that any change in the future will be for the better. Business in general in the United States is improving, the demand for lumber should be very great.

The demand for local consumption is only fair. There is considerable building under way in the city of Halifax and elsewhere throughout the province, but not sufficient to encourage the yards to stock up to any extent.

There has been a substantial reduction in the wages of mill men, and the cost of production has come down though not to the extent that it is generally believed. The Early spring was unfavorable for driving operations and many of the drives were held up for lack of water. The recent heavy rains, it is thought will enable practically all the drives that were stranded to reach the mills.

Emergency Tariff Would Hurt Lumber Sales

Forewarned is forearmed. The lumbermen of the west are rather uneasy about the Emergency Tariff Bill which is before the Ways and Means Committee in the House of Representatives at Washington. In addition to the taxation on agricultural implements, wheat, etc., it is proposed to put a duty on Canadian lumber crossing the border. It is said this levy will be $1.00 on rough lumber, $1.50 on dis and $2.50 further manufactured.

A recent despatch from Victoria says: Ben W. Whitcomb, of Washington, economist and tariff expert of the United States Tariff Commission, arrived here to investigate costs of cutting logs and producing the various grades of lumber, and on what he finds out the tariff commission will base its decision as to whether Canadian lumber should pay a duty on entering the United States. Mr. Whitcomb will submit his data to the Ways and Means Committee at Washington, which is now considering proposals from United States mill men for a tariff against Canadian competition.

Writing to a well-known Toronto firm, a leading lumber concern of Western Canada, says: "We are manufacturers of spruce and have hesitated writing some of the other spruce manufacturers in the East. As several are selling pulpwood in connection with their operations, they might not take kindly to the suggestion of a retaliation on the part of Canada with an export duty on pulpwood cut from private lands in the provinces of Ontario, Quebec and New Brunswick. While the Fordney bill is a domestic question with the United States, still we do not think that Canadians should sit idly by. The subject is one of sufficient importance to justify action, as the bill, if it finally passes at Washington, will strike a serious blow at the Canadian lumber trade."

Continuing, the writer says: "I have just returned from Washington, and I am firmly of the conviction that there is a real danger of this duty going on lumber unless everything is done in the matter of defeating it. Quick action is necessary as this bill is going to be reported out of the Ways and Means Committee by June 1st."

The western firm in question has also sent to eastern importers of American goods a timely letter, as they believe that if the Fordney measure becomes law, Canada will suffer still more adverse effects in the matter of exchange. It is strongly urged that lumber products be left on the free list. A letter sent to the United States customers and friends is in part as follows: As you are aware the Fordney Bill is before the Ways and Means Committee in the House of Representatives, and in addition to the taxation of the agricultural products, it is proposed to put a tax of $2.50 per thousand on Canadian lumber entering the United States.

Forest products last year were approximately 60 per cent. of our entire exports to the United States, and are a large proportion of the only commodity with which we can partially pay our bills for the enormous amount of goods which we buy from the United States. You can understand further that any curtailing of shipments of lumber will have a disastrous effect in further increasing the high rate of exchange.

While I wish to be candid in saying that I am particularly interested in the proposed duty on lumber from the purely selfish standpoint. I thought possibly, in view of its undoubted effect on the exchange situation, you might feel disposed to write some of the United States people from whom you buy your material, asking them that on this account alone, and the fact Canada buys so much from the United States, that, in the suggestion of taxation for export, they are hitting their second best customer. Your United States connections might be prevailed upon to use their influence with the Ways and Means Committee, in urging that committee to abandon, at least, the tax on forest products, which, as stated, constitutes the major portion of our exports.

In a recent interview, a western lumberman ably sums up the situation, and it must be admitted that he has taken a calm and dispassionate view of the whole matter when he says:—

With the United States market closed to Canadian lumbermen there would also be another door closed to an early adjustment of the exchange rate. Last year Canadians paid $100,000,000 in exchange, which is an indication of the extent of which Canada is a customer of the United States. While forest products make up about 60 per cent. of the goods sold to the United States by Canada, a large portion of this is pulpwood which is allowed to cross the border duty free.

If certain classes of forest products are only to be allowed into the United States after paying a prohibitive duty, the view of the western lumbermen is said to be, that the Canadian Government should see to it that the goods that the U. S. people want to purchase in Canada should be taxed on this side of the line to the benefit of Canadians. An export duty on pulp wood, it is considered, would have a good effect and if Canadian industries must suffer through the Fordney Bill, it is predicted that a movement looking to retaliation of this character will develop.

One decision already has been rendered in connection with the heavyweight championship battle to be fought July 2 at Jersey City, between Jack Dempsey and Georges Carpentier. The winner of the preliminary verdict is the Coastwise Lumber Supply Co., Newark, N.J. The Coastwise company has been awarded the contract for 1.367,000 feet of lumber. The arena will be constructed entirely of shortleaf southern pine.

Let's Be Reasonable

Does any reader of this page believe that **at this time** a re-adjustment of wages and hours in the printing industry involving an increase in labor costs of 36 per cent. is justified? "Well," the reader asks, "What **are** present wages and hours?"

Toronto printers now have a minimum wage scale of $35.20 per week for 48 hours. This is an increase of 10 per cent. over the scale called for in the agreement now expiring and was granted voluntarily by employers a year ago.

Their demands now are for a wage of $44 per week for 44 hours.

This is an increase of $8.80 per week for four hours less work.

It means an increase in labor costs of 36 per cent.

Toronto employing printers feel that they cannot grant these demands, and they believe that the general public will support them in their opposition to an increase of from 73c per hour to $1.00 per hour to printers, pressmen, bookbinders, and mailers, **at the present time** and in view of business conditions **as they now exist.**

It is understood that International Union officials at Indianapolis have issued orders to local unions that the 44-hour week must be the basis of all new agreements.

In this order, employing printers believe that these Indianapolis officials are out of line with the need which is apparent in every industry for lower cost of production.

This is not a time for saddling any industry with an additional 36 per cent. labor cost, and publishers and job printers feel that they are justified—in the interest of the public—in resisting this unreasonable demand from Indianapolis.

The issue will be decided between now and June 1st. If the union demands of an increased wage of $8.80 per week for 4 hours' less service are not withdrawn, a strike seems inevitable.

Pressure, therefore, must be brought to bear upon the officials at Indianapolis. They must be shown by members of the local union (many of whom feel that they are being forced to make unreasonable demands) that the Canadian public which buys the product of the printing craft, either in the form of advertising or subscription, does not look with favor upon any ruling which would add so heavily to the cost of that product.

Publishers and job printers in Toronto want to be fair. This is indicated by their action in voluntarily raising wages a year ago.

They must, however, in justice to themselves and the public they serve, resist these impossible demands.

Let's Be Reasonable

An expression of opinion of readers of this paper on the Unions' proposals involving an increase of 36% in the labor cost of printed matter, is asked. Will you not write a letter to the editor (not for publication) telling him your view of the situation.

This statement is published by and has received the endorsation of the Toronto publishers who are members of the

Cupid Busy During Timber Investigation

G. C. Hurdman, Ottawa, Ont.

The engagement is announced of G. C. Hurdman, a well-known lumberman and formerly representative for Ottawa West in the Ontario Legislature, to Miss Bird Beley, daughter of Mr. George Beley of Mount Forest, Ont., and for some time private secretary to Hon. Beniah Bowman, Minister of Lands and Forests. The marriage will take place in the near future. Mr. Hurdman, who is a director of the Hurdman Lumber Co. and the Canadian Quarries and Construction Co., will receive the congratulations of his many friends. During the close of the Hearst administration he was chief Liberal whip.

The newspapers have weaved an interesting story concerning the engagement of Mr. Hurdman and Miss Beley, declaring that Little Dan Cupid has been busy around the timber probe. How the miniature conqueror of hearts was able to invade a cabinet minister's private car, and intrigue with such success that an experienced politician succumbed to love's wiles, is an interesting story. The sequel is now that the Hon. Beniah Bowman is now looking for a new secretary.

It all started when the minister for lands and forests made a personal inspection of the timber areas which have been so much in the limelight of provincial politics. Mr. Bowman's party included his private secretary, Miss Bird Beley, a young lady who has won golden opinions from all who have had the good fortune to become acquainted with her. Busily engaged in making private investigations for the government was Mr. Hurdman, of Ottawa, a former member of the legislature. By virtue of his experience in the lumber business he had been asked to devote his services to the province in matters relative to the timber probe.

It happened quite naturally that Mr. Hurdman had occasion to visit Mr. Bowman frequently during the minister's sojourn in the north country. Quite naturally, too, it happened that Mr. Hurdman and Miss Beley were brought together in a business way, and this is where the little god with the bow and arrow got in his fine work. One of the qualifications which made Miss Beley a valuable private secretary was a native ability in making even the most ordinary business dealings radiate pleasantness.

Mr. Hurdman found keen enjoyment in this congenial atmosphere and, finally, the departure of the minister caused him to realize that the author of his enjoyment had become necessary to his continued peace of mind. It was a case of business before pleasure however, and Mr. Hurdman had work to do. Not long ago, his work complete, he had the opportunity to tell Miss Beley what was in his mind.

Interesting Decision in Lumber Suit

Mr. Justice Surveyer, in the Superior Court, Montreal, on May 9 gave judgment in an action brought by the Metropole Lumber Company, Limited, to recover $995.41 from Leguerrier and Baillargeon, jointly and severally, for lumber alleged to have been sold and delivered to the defendants by George W. Faust. The plaintiff based a right of claim on a transfer of the credit from Faust to plaintiff for goods and valid consideration.

Mr. Justice Surveyer dismissed the action. He pointed out that the transaction between Faust and the defendants was a commercial sale, and in the light of that fact plaintiff's action could not be maintained without a writing signed by defendants unless the buyer had accepted or received part of the goods or had given something in earnest to bind the bargain. The obligation of the seller to deliver was satisfied when he put the buyer in actual possession of the thing, or consented to such possession being taken by him, and all hindrances thereto were removed. Plaintiff, however, had produced no writing signed by defendants and had obtained no consent from them.

As to proof of delivery, Justice Surveyer said plaintiff submitted only copies of bills of lading from the Hawkesbury Lumber Company to Faust and exhibited the entries in its own books. But the bills of lading and the entries dated back to 1914, whereas the account on which the action was based was dated 1915. No proof had been validly made that the lumber received from the Hawkesbury Lumber Company was transported to defendants. Hence, the court held that plaintiff had not established the essential allegations of its demand.

Adjudicating on a motion submitted by plaintiff asking leave to amend the motion by reducing it to $251, Judge Surveyer said it could not be allowed, as it would change the nature of the demand. Defendants, he added, acknowledged that they owed the amount in question to Faust as holder of certain notes and cheques, but these effects were not produced, the proof showing that they were rather the property of Molsons Bank than Faust or plaintiff.

Plaintiff in its motion to amend simply alleged that the consideration for the sum of $251 was the lumber sold and delivered; it did not allege that the lumber sold by Faust, nor that the lumber formed part of that the price of which was claimed by the action. A witness could be examined only touching the facts in issue; and defendants formally declared that the notes and cheques mentioned were signed in relation to a purchase of lumber made by a person other than Faust, and that Faust merely became assignee of the said notes. Admissions could not be divided against the party making them. On the whole therefore, Justice Surveyer was of opinion that the plaintiff could not be permitted to make the desired amendment of claim; and, for the reasons above stated, the action was dismissed with costs, the court ordering that defendants be taxed as ordinary witnesses.

Conducting Survey of English River Limits

Capt. Edgecombe of the Forestry Dept. of the Keewatin Lumber Co., Kenora, Ont., left recently to make a general cruise or survey of the forest wealth of the English River Limits, with the object also of preparing plans for its general conservation. He has a staff of 12 young men, some of whom are students from colleges taking up forestry. They will be divided into six parties of two each and will cover as much of the area during the summer season as possible. The limits will be divided into sections and subdivided in such a way that when their work on these sections is finished a complete record of the timber on the area covered will be available from field notes, and ultimately a record of the entire limits. The best methods of getting the timber out will also be noted, and the most desirable points for the location of camps, etc. When the time comes for actual cutting operations, the company will have available in their office all the data which they will require, including the particulars of heavily timbered and scattered areas, the kind of timber, etc.

Ideal Lumber Company Gets Ideal Site

A new retail lumber yard has been opened in Hamilton, known as the "Ideal Lumber & Supply Co." The yard is located on the main line of the Grand Trunk Railway from Hamilton to Niagara Falls, being situated on the outskirts of the Ambitious City and right in the thriving district of East Hamilton. The site is 1¼ miles east of any other lumber yard, and it possesses a siding of 800 feet, being at the junction of Parkdale Ave. & Pipe Line. In the near vicinity is a 10 acre park laid out for future beautification of the district. The Ideal Lumber & Supply Co. have erected, on their 5½ acres of land, closed and covered sheds 250 feet long, installed an 800 foot siding and put in permanent roads. The appearance of the buildings is attractive, the color being yellow with black lettering.

This yard will look after the local demand and will also meet the call from Burlington Beach. In connection with the premises there will be a pole yard where a large stock of B.C. timbers will be carried.

There is quite a lot of building in the neighborhood. Although it may be thought the yard is a long way from the centre of Hamilton, it is believed by the company that the situation will be an "ideal" one within the next two or three years and in the centre of considerable activity, as there is much structural activity in the district. Builders' supplies will be carried along with a representative stock of lumber.

The directors of the company are Guy H. Long, (president), F. R. Burton, H. P. Brierley, B. L. Harper, and D. G. Webster, all of Hamilton, and the capital stock is $200,000.

Premier Pays Tribute to Canadian Forester

The lumber industry was once an active one in New Zealand. But a too generous cutting down of the young trees well nigh killed it. New Zealand is, however, taking steps to repair damages.

"Forest regeneration is one of our most active enterprises and has been for the past few years," said Premier W. F. Massey, of New Zealand, when in Vancouver on his way to the Imperial Conference in London. He stated that during the past eight years there had been planted in that Dominion, 40 million young trees. They were first cared for in nurseries, and after that planted in the forests. The Premier spoke also of the good work done by Mr. L. M. Ellis, who was made director of the New Zealand forest service nearly two years ago. Mr. Ellis is a Canadian, a graduate of Toronto University, at one time assistant superintendent to the C.P.R. Forest Service in Calgary, a captain in the Canadian Forestry Service in France and later he was U. S. reforestation committee adviser.

TIMBER BLOCK IN BRITISH COLUMBIA

For Sale

TO close out an estate there is offered for immediate sale, block of standing timber covering an area of some 25 square miles. Contains Spruce, Fir, Tamarack and Pine. Situated about 10 miles from railway station. Block has been carefully cruised. Reports, maps and full particulars on application to

FIRE BRICK

AND CLAY

We make several brands of fire brick made by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best adapted fire brick for your boilers, dutch ovens, refuse burners, kilns, etc.

We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse, which enables us to ship at once.

We manufacture the following well-known brands:

"Elkco Special," "Elk Steel," "St. Marys," "Keystone" and "M.D. Elk"

EDGINGS

The Blackville mill near Newcastle, N.B., recently started rossing pulpwood. About forty men are employed and it is expected the plant will run all summer.

The big freighter, Katrinka Luckenback, which recently visited Vancouver via the Panama Canal, loaded 6,800,000 B. C. cedar shingles for her return voyage.

Grosart & Sinton, Limited, Montreal have been incorporated to act as agents, commission merchants and representatives for lumber merchants with a capital of $50,000.

The shipyard mill with all its machinery at the yard of C. T. White & Son, at Alma, N.B., was burned recently. The mill will not be rebuilt but will be replaced by a rotary mill to be brought from Hastings.

The Watt Milling & Feed Co., 33 Royce Ave., Toronto, have recently completed an attractive and spacious new office building, which is well laid out and possesses all the latest facilities and conveniences.

The "Canadian Scottish," of the Canadian Government Merchant Marine, was launched recently. It was the first ship built in Prince Rupert. The shipyards are to continue in operation permanently at Prince Rupert.

Miramichi Lumber Company, Limited, Boiestown, N.B., was recently granted a provincial charter to conduct a general lumbering concern, logging manufacturing and dealing in all kinds of forest products. Capital $1,000,000.

Excavation has begun at Connaught, Ont., for a $25,000 wood rossing plant which the T. S. Woolings Co. state will be in operation by the end of July, with a capacity of 300 cords a day. The mill will be located on the Frederickhouse River.

British Columbia will use airplanes to fight forest fires this year. Twenty thousand dollars have been set aside by the Government for this purpose. The planes will be employed for locating the exact position of a fire and then rushing fire fighters and equipment to the scene.

The Doheny Pulp and Hardwood Lumber, Limited, Montreal, was recently incorporated to manufacture and deal in lumber, pulpwood, paper and other forest products. Capital $50,000. J. Lamothe and P. Leveille, lumber merchants, both of Montreal, are two of the incorporators.

The Solidbord Company, Limited, Toronto, was recently granted a provincial charter to take over the business carried on by Manley Chew, at Midland, Ont., and to manufacture and deal in solidbord, made from sawmill waste and other forest products. Capital $3,000,000.

The McCraney Lumber Company, Limited, Hamilton, Ont., were recently granted a provincial charter as lumber and timber merchants, sawmill and planing mill operators. Capital $40,000. Two of the incorporators are Guy H. Long and F. R. Burton, lumber merchants, of Hamilton, Ont.

A petition for the winding-up of Mill Cut Homes and Lumber Ltd. has been filed by Alfred Ingle, a director. Their plant at Kitsilano, B.C., was destroyed by fire on April 13, and Mr. Ingle desires that instead of building and carrying on the business it be wound up and the assets distributed.

The Canadian Forestry Association exhibition car is now touring New Brunswick. Many centres are being visited during the month that the car will spend in the province. Considerable propaganda work has been done for the prevention of forest fires.

Forest fires, which are menacing several districts in New Brunswick, were recently extinguished by the timely arrival of rains. May 10th was the last day on which permits for settlers and others, having fires burning for clearing lands and other purposes, expired.

W. A. Anderson Co's. mill at Burnt Lands Brook, near McGivney, N.B., had a narrow escape from fire which was noticed by one of the men who, with the assistance of the other men, soon had the fire under control, only a slight loss of belting and woodwork resulting.

The shingle mill of R. H. Wright on the Aylmer Road, near Ottawa, was recently damaged by fire to the extent of $5,000. The cause of the blaze is unknown although it is believed to have originated through a short circuit in the electric wiring connection with the motor which ran the mill.

With the delivery of the freighters Canadian Harvester at Port Arthur; and the Canadian Logger at Midland; and the Canadian Pathfinder and the Canadian Engineer at the Toronto yards of the Collingwood Shipbuilding company, the building program for the Canadian merchant marine was completed.

The Nipigon Fibre & Pulp Co., Limited, recently began to manufacture pulp at Nipigon. When the mill is operating to full capacity, 100 tons of ground pulp will be turned out daily. A large supply of wood has been received from the settlers and a good deal of it is being brought to the mill in rafts.

The Consumers' Lumber Co., Hamilton, Ont., have leased a retail store on the south side, 109 King St. West, for the display of the various lines of woodwork made and carried by this progressive firm, including hardwood flooring, balusters, stairs, interior fittings, interior trim, columns, turnings and other specialties.

Bathurst Company, Limited, Bathurst, N.B., was lately granted a federal charter to take over the business known as the Bathurst Lumber Company and to manufacture and deal in lumber, pulp and paper. Capital $15,000,000. Among the incorporators are Hon. William Cameron Edwards and N. F. Wilson, both of Ottawa.

Walter Burgess, the official tree-planter of Mimico, Ont., asked the Council to relieve him from his duties on account of age and ill-health. Years ago Mr. Burgess planted many trees of his own accord. In 1918 he was appointed the official tree planter, and since then has planted no less than 1,552 trees on the streets of the town.

It is estimated that between a thousand and fifteen hundred tons of pulpwood were destroyed by fire at the plant of the Brompton Pulp and Paper Co., East Angus, recently. The weather in the district had been unusually dry for several days and fanned by a slight breeze, the flames made considerable headway before being discovered.

The sawmill of N. D. Seaman & Sons at Sauble Falls, Ont., had a nar-

row escape from being burned lately, and as it was two hundred acres of hardwood bush were destroyed in the first bush fire of the season in Bruce county. Mr. Seaman expects to be able to salvage very little of the burned timber and his loss is a heavy one.

The William Hamilton Co., Limited, Peterborough, have recently completed the installation of the following equipment: two dryers, with 32 cylinders for sulphite at the Edmunsdon, N.B., mill of Fraser Companies, Ltd., and six centrifugal screens for the same company, and two screens for Price Brothers & Co., Limited, at Jonquiere, Que.

The Prince Rupert Pulp and Paper Company recently incorporated in British Columbia, is asking industrial privileges at Seal Cove within the city limits. The company will erect a sulphite mill with a capacity of fifty tons of pulp. It will operate in conjunction with the Emerson sawmill, and the intention is to build a large paper mill later on.

$15,000 damage was done by a fire recently to the Dupius lumber yards on Church St., Verdun, Que. The flames broke out in the drying kiln and raged for over two hours. It was thought at one time that the entire yard would be swept, but the firemen were able to restrain the flames to the drying kiln. The damage is covered by insurance.

At St. Neree de Bellechasse the large sawmill belonging to George Therrien and Joseph Dumont of Levis, was destroyed by fire. The mill and equipment was valued at $15,000 with only $7,000 insurance. The mill gave employment to about 100 hands and its destruction is a severe blow to the population of the place. The origin of the fire is unknown.

P. T. Roberts, Limited, Winnipeg, Man., was recently incorporated to take over the business carried on by Percy Theodore Roberts, of Winnipeg, and to conduct a general lumber business, manufacturing and dealing in lumber products. Capital $150,000. P. T. Roberts and W. Roberts, lumber merchants, both of Winnipeg, Man., are two of the incorporators.

It is understood that negotiations are under way for the establishment of a large pulp and paper mill on the Lower Arrow Lakes about three miles from the Canadian Pacific Railway at Robson, B.C. The enterprise will likely be carried out by a British syndicate headed by Sir Lionel Fletcher, who has large investments in the timber of the Revelstoke district.

The Mattagami Pulp & Paper Company's mill at Smooth Rock Falls, Ont., which has been closed down for about a month owing to the dullness in the sulphite pulp market, has resumed operations, there being a slight improvement in the demand for the product of the company. The plant is located on the Mattagami River, west of Cochrane, and has a capacity of 45,000 tons per annum.

An interesting event took place in Quebec City on Arbor Day, when 100 trees were planted in the Exhibition Grounds. His Honor, Sir Charles Fitzpatrick, lieutenant governor of the province, planted the first two trees, and Hon. L. A. Taschereau, Premier of the province, Hon. J. E. Perreault, Minister of Colonization and Mines, and Mayor Samson in turn planted two more each. The function aroused much interest.

Temiskaming Pulp and Paper Company, Ltd., Haileybury, Ont., have been authorized by supplementary letters patent to increase their capital of $500,000 to the sum of $1,000,000. The company will erect a new fifty ton ground wood pulp plant near Haileybury. The ratepayers of Bucke Township voted upon a bylaw recently to grant a fixed assessment of $40,000 to the Temiskaming Co. The measure was carried by a vote of 202 to 3.

L. G. Delamater, in charge of the Edmonton (B.C.) office of Harry J. Strong (Inc.), was guest at the luncheon of Seattle wholesalers recently, and gave a brief and instructive talk on conditions in his territory. His firm specializes in spruce. While the trade is quiet, Mr. Delamater pointed out that a reduction in Canadian freight rates had made it possible for manufacturers to enter the eastern markets, from which they had been excluded for years.

The largest raft that ever came into Owen Sound was brought to that city recently by the tug Harrison and tug Crawford, from Shawanaga, north of Parry Sound, on the Georgian Bay. The raft contained sixty thousand logs, mostly pine and hemlock, and was by far the most valuable raft ever brought here. The timber is the property of the John Harrison & Sons, Company, Limited, Owen Sound, who have been cutting timber on the north-east shore of the Georgian Bay.

A recent despatch from Quebec stated that the Department of Lands and Forests had received word that the forest fires, which had broken out at Lake Frontiere, St. Camille, Bellechasse, and also in the St. Maurice district, had been extinguished. The forest fires started much earlier this year, due to prevailing dryness in the eastern part of the Province, but the officials of the Department are well satisfied at the results attained by new methods employed in fighting the fire and the minimum losses.

Negotiations have been completed for the transfer of a half interest in the Brunette sawmills at New Westminster, B.C., from Messrs. Thurston and Flavelle to Ross Peers and A. D. Anderson of Vancouver. Some time ago the former concern purchased the entire stock of the company and now have sold a half interest to the latter parties. Messrs. Thurston and Flavelle were formerly operators at Port Moody and Messrs. Peers and Anderson also had a mill on Burrard Inlet. Both concerns are well known and prosperous lumber and shingle manufacturers.

James Finnerty, a lumberman who was well-known in the lumber industry in Eastern Ontario, and particularly in connection with the drives, died recently. His body was found floating in the Ottawa River near the boom below the mouth of the Madawaska at Arnprior. He was a man of great physical strength and was 71 years of age. A wife and family of eight children survive. The general supposition is that when returning on the night train from Ottawa, where he spent a few days, he stepped from the coach in which he was riding when the trainman called the station and fell unseen into the river.

The stables of the Hope Lumber Co. at Thessalon, Ont., were burned to the ground recently. Thirty-four horses were in the barns at the time and only three were saved. The lumber piles of the Hope Company were in great danger but the firemen did excellent work in confining the blaze to the building in which it originated. The Hope Lumber Co. were able to resume operations the next day through the kindness of the Bishop Lumber Co., of Nesterville loaning six teams to help them out of the emergency, while horses from Dean Lake, belonging to the Hope organization, arrived during the week. The company's fire engine, as well as the tug "Penetang," all did splendid work.

QUICK ACTION

Can be assured if you will let the CANADA LUMBERMAN "Wanted and For Sale" department take care of your miscellaneous business needs.

We receive constant testimony from advertisers as to the value they have received from this far-reaching and inexpensive method of publicity in the lumber trade and allied industries.

Try these columns. The result will surprise you.

CANADA LUMBERMAN
347 Adelaide St. West - - TORONTO

Whether your camp starts with twelve or a hundred units—additions to the Bunk Equipment can always be had quickly, as *growth demands*—

Simmons Steel Bunk Units

For Industrial, Lumber and Railroad Construction Camps

ARE of standardized design and construction. Start with as few units as your men require, and add *additional* units as the working force increases.

A more practical solution of the sleeping equipment problem of large employers of labor, than this, could not be asked for.

Labor, skilled or unskilled, deserves the most improved sleeping accommodations obtainable. It a part of good business to provide it. A contented, physically fit and efficient working force *results*.

Simmons Standardized Steel Bunks may be ordered in Single or Double Deck Units. They are 100% sanitary, are easily taken down and moved, and last indefinitely.

Write today for full information regarding our sanitary, comfortable, and serviceable standardized Steel Bunk Units. Complete data, specifications and illustrations of all styles, furnished promptly upon request.

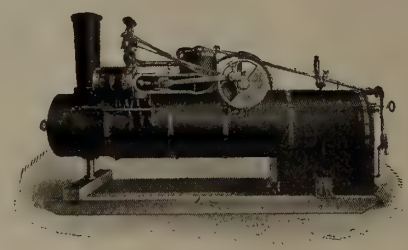
SERVICE STATIONS IN ALL PRINCIPAL CITIES

Good Will

—a mighty valuable asset to your business and something that cannot be built up in a few days. It is the result of painstaking efforts to give the customer just a little more than he expects—keeping the quality of your products standard—and backing up every word of your advertisements. In short, it's Service—Real Service—that builds Good Will.

PORTABLE ENGINE
ON SKIDS OR WHEELS



built specially for sawmill work, with large deep fire box. Specifications for all sizes registered in the different Provinces, including British Columbia, Alberta, Saskatchewan, Manitoba, Ontario and the Eastern Provinces. These boilers are built for a working pressure of 175 lbs. per square inch, ensuring the greatest possible efficiency.

We also build Portable Sawmills mounted and unmounted, suitable for capacities from 2,000 to 20,000 ft. per day. Also Edgers, Lath Mills and Shingle Mills. Steam Traction Engines and Gas Tractors."

Genuine HOE Chisel-Bits and Shanks

Absolutely Uniform in Temper

Cannot Be Excelled in Cutting Qualities and Finish

Standard the World Over

GENUINE HOE BITS, marked "H", are assured an absolute central bearing in the plate, giving uniform clearance and consequent longer wear.

They do not split when inserted, nor break when used

GENUINE HOE SHANKS, stamped "R. Hoe & Co." fit sockets snugly, hold bits firmly, and give lasting satisfaction.

R. HOE & CO. 504-520 Grand Street New York City

America's Oldest Saw Manufacturers

Buy Chain by the Pound of *Strength* and *Service*

TWO chains may be identical in appearance, yet one is ten per cent heavier and thirty per cent stronger than the other. Mere inspection can tell little; the use of a scale and a few simple tests will reveal marked differences.

If you lack facilities, a simple bending test with the aid of a vise and a hand hammer will tell you something. Don't buy a chain that breaks short under the hammer, for you want a tough, not a brittle chain.

Subject our chains to the most thorough comparative tests and you will find substantiation of our claim that we give you more pounds of service and units of durability than any other maker. And what is more important, forty years of experience as chain makers have taught us how to maintain the high standards.

We have chains for every type of transmission, elevator or conveyor, and have engineers to assist you in making proper selections.

Write for catalog containing prices and full particulars.

Steam logger. Seven sizes, from 10 to 50 H.P., and one or more drums to suit the work.

This Type of Logging Machinery is a Proven Success at

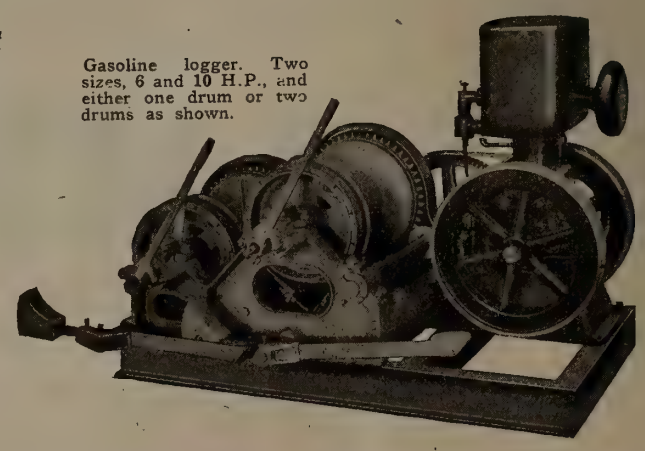
Reducing Labor Costs, Increasing Output of Logs and Multiplying Profits

SOME OF THE WORK THEY DO

Drag logs from the stump to roadway or rail.
Load logs on wagon, sleigh or car.
Unload logs from wagon or car.
Pile logs where you want and as high as you desire.
Pull loaded wagons or sleighs up steep hills.
Put logs into water, or take logs out of water.

These machines are small enough and light enough to be moved about easily over rough country, without rails or special roadway.

Gasoline logger. Two sizes, 6 and 10 H.P., and either one drum or two drums as shown.



Marsh Engineering Works, Limited *ESTABLISHED 1846* **Belleville, Ontario**

Sales Agents: MUSSENS LIMITED, Montreal, Toronto, Winnipeg, Vancouver.

When You Overhaul Your Mill

THERE are wet places in every saw and pulp mill where nothing but the highest class belting can "make good." It is for these wet places that we recommend what most mill-men swear by—our

"ACME WATERPROOF" BELT

This belt is especially made for a rough and trying service. It has less stretch than any other belt by 15 to 25 per cent.
When you are overhauling try a Goodhue "Acme Waterproof" belt. Other Goodhue belts are "Extra" and "Standard."

Prices and Particulars on Request.

The Old Camp Stove

CAMP HEATER

No.	Length of wood	Diameter of Steel Body	Weight
30	30	18	100
38	38	23	150
44	44	23	160
50	50	23	175

SUPPER is over. Pretty soon the pipes are drawing good and the men are gathered 'round the faithful old stove—glowing red, and radiating warmth and good cheer. The old, old yarns go the rounds once again and Red McTavish is sure to give his usual turn at the fiddle. Maybe a passing preacher or a "Y" man is there to lead the sing-song before everybody turns in for the night.

What a big part the stove plays! It is the centre of the evening's activities. And so it has been for a good many years. Even the old timers can't remember when it first came. Look at it closer. The name is there. It is an "ADAM HALL"!

COAL OR WOOD—*In Two Sizes*

Ovens, widths	Depth	Height Fire Boxes, Wood

SIMONDS

Crescent Ground Cross-Cut Saw No. 13

Good, easy running cross-cut saws on any timber operation are most essential part of the equipment. They speed up production, and if they are

Simonds Crescent Ground Cross-Cut Saws

they make the men who use them cheerful, because most lumberjacks know that Simonds Saws are easy running blades that cut fast, hold their edge and do not bind in the kerf. For all kinds of timber cutting jobs Simonds are leaders.

DRYING

VENEER—For surpassing quality, for greatest efficiency and economy, drying veneer—investigate the "Proctor" Automatic Veneer Dryer. Send for your copy of our Catalog No. 57—a new book, interestingly gotten up; giving many views of installations.

PROCTOR & SCHWARTZ, INC. Philadelphia, Pa.

"Proctor" DRYERS

Arrow Head Saws

Made of Chrome Vanadium Steel and tempered by a process known only to us.

In these saws you have a cutting tool that will stand up under the hardest usage and always give the greatest satisfaction.

And that lumbermen in all parts of Canada are appreciating their worth is shown by the many "repeat" orders we receive.

"Arrow Head" Saws are made in Canada by a Canadian firm employing Canadians—another reason why they are so good. May we send you catalogues and price lists?

PERFECT POWER

D. K. McLAREN, LIMITED · MONTREAL · TRADE MARK

PERFECT Power means perfect transmission and perfect transmission means D. K. McLaren's Genuine British Oak Tanned Leather Belting on every drive. This will eliminate every trace of the stretch and slip menace so common in Mills using inferior belting.

There is no secret about D. K. McLaren's. The reason for its reliability is obvious to anyone who enquires into the process of its manufacture. Nothing but the finest hides—cured and tanned with the utmost care—fashioned into belting by men of experience who know the requirements of Canadian Lumber Mills and factories.

What is Your Season's Cut Worth?

How much do you value your season's cut? Are you taking any chances of losing it? Do you know that a fire in a lumber camp, wiping out camp and provisions, means no timber cut? Have you thought that many fires in lumber camps start from an overturned oil lamp or lantern? Do you know that Dominion Light entirely eliminates this danger?

A Dominion Light Plant in your lumber camp is a sound business investment. It is an investment of a few hundred dollars that may save thousands. It is business insurance.

A Dominion is the lighting plant for you to buy. Its quality resulting from the use of fine materials and a high manufacturing standard means ability to deliver continuous power at a low upkeep.

Write us for full description and name of nearest dealer.

SPECIFICATIONS

Rating one K.W. (1000 watts) with a continuous overload capacity of 20% or more. Battery of 160 Ampere hours. Air-cooled engine with 3 S.K.F. ball bearings operates on Kerosene. Loads sixty 20-watt lights with engine running or thirty 20-watt lights from battery alone for eight hours.

Sturtevant
PUTS AIR TO WORK

Helping the Boiler Room

Most planing mills send the sawdust, shavings and refuse to the boiler room, and it is generally sufficient to meet all fuel requirements in the steam driven plant.

To gather all this refuse from the machines, floors, and rafters requires much extra work and in some instances men are employed on this job alone.

The modern method is the installation of—

Sturtevant
(TRADE MARK)

SLOW SPEED — LOW POWER

Planing-Mill Exhausters

This system removes all the accumulation of shavings and sawdust direct from the machines, conveying it to the boiler fires, or to some vault or fuel center as desired.

The result is—a clean mill and a saving in time and money in the handling of this refuse.

We shall be pleased to forward our special Bulletin for your inspection.

Sturtevant Dust Collecting System installed on planers in C.P.R. Angus shops, Montreal.

Tudhope-Anderson Detachable Lumber Trucks

Unequalled stand-up-ability on tough, rough and soft road-beds are the tests that explain the widespread popularity of these sturdy trucks among lumbermen. Cut shows Front Hauling Gear No. 41 coupled to Hind Gear No. 42. One or more Hind Gears may be attached or detached with ease.

Look at the wide tire steel wheels. They mean easy hauling. We guarantee them. Spokes may be renewed in case of accident—not so with others. Axles are high quality square steel ensuring many years' service. Wood parts are best oak, air-seasoned and kiln-dried. All parts well ironed and braced.

Built to the following specifications:—

No. of Truck	Size of Steel Axle	Tire Inches	Wheels Inches	Frame Length	width
41 Front Gear	1¼" square	4 x ½	26	....	....
42 Hind Gear	1¼" square	4 x ½	42	5 feet	40 inches

Rubber Goods FOR LUMBERMEN

Belting Our long experience in the making of Rubber Belts enables us to specialize on this line. "P.M.S.," "Special Drive" and "Lion" are our leading brands for power transmission.

Packings "Redstone" High Pressure Sheet Packing has proved by test that it will outlast any other similar packing on the market. We make Spiral and Ring Packings, etc., that are equally reliable.

Hose for Steam, Water, etc., in various grades, made especially to give satisfactory and economical service under different conditions.

Fire Hose One or more of our twenty brands of Fire Hose will be found, not only in the best equipped Factories, Mills, etc., but in almost every Fire Department in the Dominion.

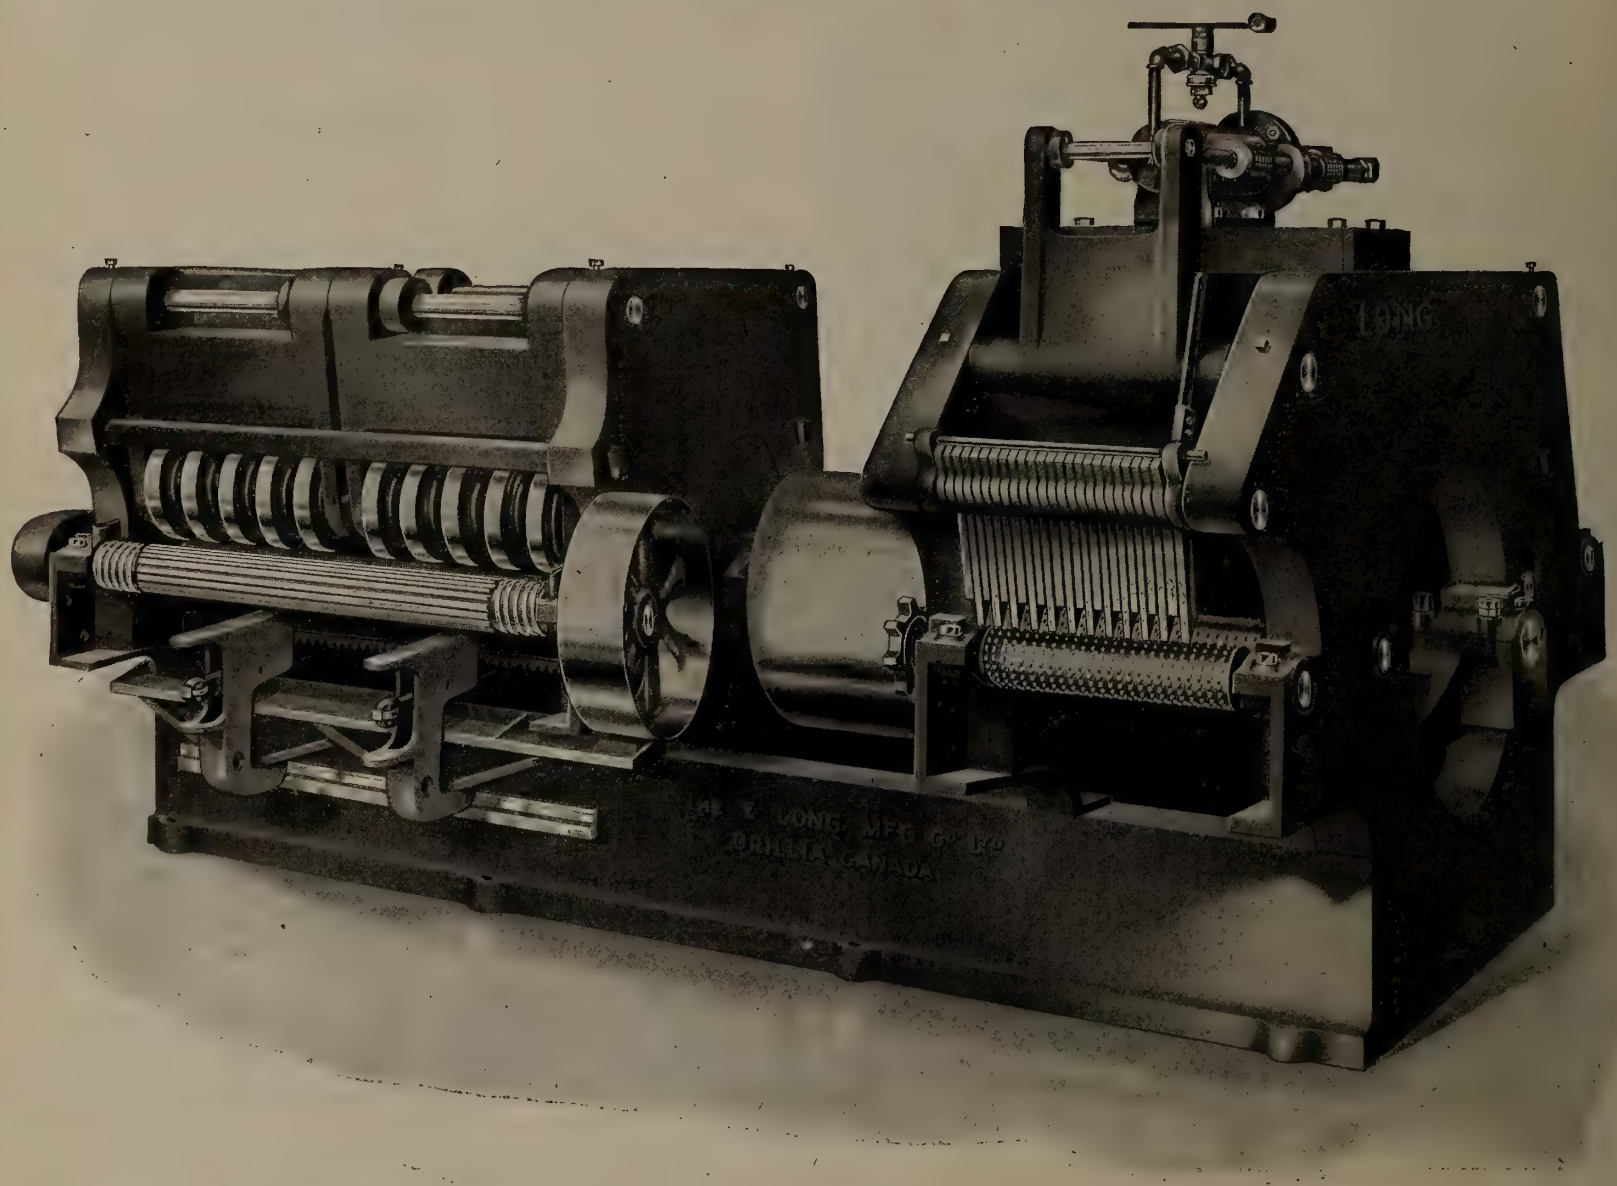
PICTURE THIS
UP-TO-DATE GANG EDGER
IN YOUR MILL



There are many mills in which the layout demands just such a machine as this.

And look how easily you can change saws?

It is as good as it looks. May we send full description?

A VERTICAL RE-SAW

For years we have recognized the faults of the horizontal re-saw, such as the excessive space taken up in the mill—the necessity of raising or lowering the bed, or the saw blade itself in order to change the thickness of cut—the difficulty of separating the slab from the lumber at the rear of the machine, and the advisability of having every slab inspected by the sawyer before being passed through the machine. But, until recently we have never been able to perfect a vertical re-saw which would meet in every way the high standard of excellence which every machine bearing the name of WATEROUS must possess .

We are at last, however, able to offer to the Sawmill Men of Canada, a machine that not only overcomes the above faults, but one which combines all the advantages of the horizontal and vertical re-saws.

Here is a machine which will positively cut straight slabs and half logs **regardless of irregularities in material.**

The bed consists of four fluted live rolls which are adjustable and which take the place of the planed table.

There are two press rolls. The first swings on a vertical shaft in a frame which presses firmly against the feed rolls, bent to the saw in a steam actuated saw tooth roll. These two rolls are so arranged as to automatically take care of all variations in the size and shape of the slabs.

The swinging arm roller mounts any slabs immediately and the pressure of the oscillating cylinder aligns the slabs against the first two feed rolls, swinging the tail of the slab immediately in the line of the saw cut, this taking place before the saw enters the cut.

This arrangement prevents the usual thick or thin or scooped ends that are so common in all re-saws carrying the single press rolls and feed rolls.

The Harness of Economy

True economy consists of getting the biggest results for the money expended. For heavy hauling in the bush or around the lumber camp—a strong, sturdy harness is essential. It enables you to get the most out of both horses and men.
"Carson Quality" Michigan Lumber and Skidding Harness—made of the best oak tanned leather—by skilled Canadian workmen—has proven itself by hard tests to be the "harness of economy." If you do not know of this fine harness—ask us for full particulars.
"Carson Quality" harness and horse furnishings for every purpose will give you good, solid, honest value for every dollar expended.

HARDWOOD LUMBER

THIRTEEN BAND MILLS
SIX PLANING MILLS
FIFTEEN FLOORING UNITS
NINE DIMENSION MILLS

ANNUAL CAPACITY:
130,000,000 feet.

On this page in a preceding issue, we declared the truism that

The Way to Resume is to Resume.

That resumption of activities is under way in gratifying fashion is evidenced by orders for certain of our production beyond our capacity to fill.

Demand for our HARDWOOD FLOORING has increased to such extent that we have been compelled to decline to accept many orders.

True this almost unprecedented demand is accounted for largely by the superiority of our flooring; but it is fair to assume that it is in part accounted for by greater activity in building construction.

"Ritter" Brand Flooring should be demanded where the "last word" in perfect flooring is required.

Our flooring because of its superior intrinsic quality and the excellence of our manufacture is the standard for comparison.

Our service is efficient and our desire always to please.

By the Block and by the Hundreds

HOUSES are springing up from coast to coast. Each week sees the home building movement gaining headway—and *your* community is included. Lower building costs are having their effect at last. So then, how about your stock?

Arkansas Soft Pine

makes homes that satisfy. Framing lumber which carpenters like to work—interior finish that meets the most exacting demand of the owner and his wife. Nationally advertised—nationally famous as the "Satin-like Interior Trim."

Write the mills for prices—the Bureau for samples, hand book and home building literature

BUY BRITISH COLUMBIA Red Cedar Shingles

There is a sentiment connected with Red Cedar Shingles which is often overlooked in the every day matter of fact business transactions. They are a nature product with centuries of age behind them. On the practical side there are many outstanding features and selling points connected with Red Cedar Shingles that are also often overlooked.

It is the intention in this column to monthly present some of the outstanding features connected with British Columbia Red Cedar Shingles. With a view to placing prominently before retail lumbermen some of these talking points which will enable them to successfully sell 40 year roofs there are many outstanding examples in every district on the continent of shingle roofs which still afford perfect roof protection after 25, 30 and even 40 years, in many cases without repair.

A few years ago it was the endeavor of shingle manufacturers to secure quantity production. This resulted in an out-turn of a low grade shingle which did not possess the longlife necessary to a proper roof. This idea has been changed and the present endeavor is to better the grade and quality of shingle manufacturing. The present edge grain, thick shingle when properly laid with proper weather exposure and zinc-coated nails enables the retail lumberman or building expert to guarantee to his customers roofing protection for many years more than any other manufactured roofing covering.

LONG-BELL QUALITY WHITE PINE DOORS

MADE OF CALIFORNIA WHITE PINE IN OUR FACTORY AT WEED, CALIFORNIA

CALIFORNIA

A new and beautiful effect in a large panel design. Solid No. 1 quality White Pine stiles and rails and 3-ply rotary cut California White Pine Panel. Bead and cove sticking—flat panel.

SHASTA

One of the most popular designs in use. Solid No. 1 quality White Pine stiles and rails and 3-ply rotary cut California White Pine panels. Bead and cove sticking—flat panels.

MONGOLIA

A new and beautiful effect in a colonial design. Solid No. 1 quality White Pine stiles and rails and 3-ply rotary cut California White Pine panels. Bead and cove sticking—flat panels.

OAKLAND

A new and beautiful effect in a craftsman design. Solid No. 1 quality White Pine stiles and rails and 3-ply rotary cut California White Pine panels. Bead and cove sticking—flat panels.

California White Pine recognizes no superior among woods for making fine doors.

California White Pine is a soft wood with a beautiful grain. Regardless of climatic conditions it resists weather to a remarkable degree and takes paints, enamels and stains perfectly.

We add to the natural qualities of the wood the skill of the best door-makers.

U. S. Epperson Underwriting Co.,
Kansas City, Mo.

Quebec, Canada, January 3, 1921.

Gentlemen:

We beg to acknowledge receipt of your cheque covering your share of the loss on our plant destroyed by fire on the 5th of December last.

We wish to express our sincere thanks and deep appreciation for the prompt and satisfactory way in which you have settled our loss. The fact that you had sixty days to settle the matter, and that your cheque was sent barely three weeks after our loss, has been noted and very much appreciated by the Bank of Montreal and ourselves.

Hoping for better luck for both of us in the future and the continuation of very agreeable business relations, as in the past, we remain,

Yours very truly,
CANADA LUMBER & BOX CO., LTD.
G. Garneau, Secy.-treas.

Performing An Imperative Service

In no phase of our business is care more thoughtfully exercised than in the selection and training of men for their places in this organization.

The importance of this will be recognized by those who realize the value of fire prevention work.

Our insurance policy is not only a guarantee of prompt payment of fire loss, but it also carries with it a service that includes a regular fire prevention inspection on your property.

A thorough fire prevention inspection may save your property from destruction, and it will also assist a great deal in accumulating larger savings which will result in better insurance for less money.

Vol. 41 Toronto, June 15, 1921 No. 12

New Department is Rendering Service

When the Canadian Lumbermen's Association established a transportation department and appointed a competent traffic manager to supervise this branch the Association took a progressive step and one in which valuable service can be rendered.

For many years lumbermen have been at the mercy of the railway companies in the matter of classification, rates, tariffs, deliveries, demurrage charges, minimum weights on lumber, scaling, etc., and in very few instances in their dealings with the roads has satisfaction been speedily obtained. Some of the larger concerns, able to maintain a traffic department, have been perhaps more fortunate, for their officials are thoroughly conversant with tariffs, routing and schedules and the many underlying provisos. When the ordinary individual attempted to clear up an disputed point with the common carriers, particularly when and where the difference was of a technical character, he found that it took a very short interview for him to realize that he was up against a stone wall; at least he was made to feel that way and was somewhat in the position of a client trying to plead his own case without the assistance of a lawyer. Everyone knows the old axiom regarding the client who enters court without employing legal counsel. To phrase it mildly, he generally cuts a sorry figure and loses out.

The Canadian Lumbermen's Association, in inaugurating a traffic department, is doing something really worth while to assist shippers in all transportation matters. Mr. R. L. Sargant, the new manager, comes highly recommended for the work in which he is engaged, being qualified by long experience and association. He now reports, that that he is in a position to handle all matters relating to transportation. If any lumbermen have old claims, either for overcharge or loss or damage still open with any of the carriers, he asks that he be made acquainted with the facts, and declares that he will undertake to see what he can do in arriving at an amicable settlement. When sending in papers Mr. Sargant requests that original claim file, including the original bill of lading and original paid freight bill or complete copies of the correspondence be presented, as well as all documents which form part of the claim. "If you send us the original papers we will take good care of them and see that they are returned to you intact after they have served our purpose," he adds.

That he is anxious to extend the work of his department beyond the ordinary routine duties and render a real, genuine service, is indicated by Mr. Sargant's inquiry ofthe members of the C. L. A. if they know of any specific instance where the freight rates from their particular shipping points are not in line with those from contiguous territories. He also asks, if shippers are paying local rates to and from junction points to any territory either in Canada or the United States simply because the carriers have not seen fit to publish through rates, that the facts be made known to him.

Mr. Sargant has undertaken other matters of importance, and when everything is in proper shape no doubt an application will be made for certain reductions in the rates in the East, particularly as, roughly speaking, carrying charges are now 100 per cent. higher than they were at the beginning of the war.

Printers' Strike still on.

This is the first issue of the Canada Lumberman since the strike began. All our other publications are coming out too---only a day or two behind time.

Not doing so badly, are we?

It is some job surely, but obstacles that seemed insuperable at first are being gradually beaten down.

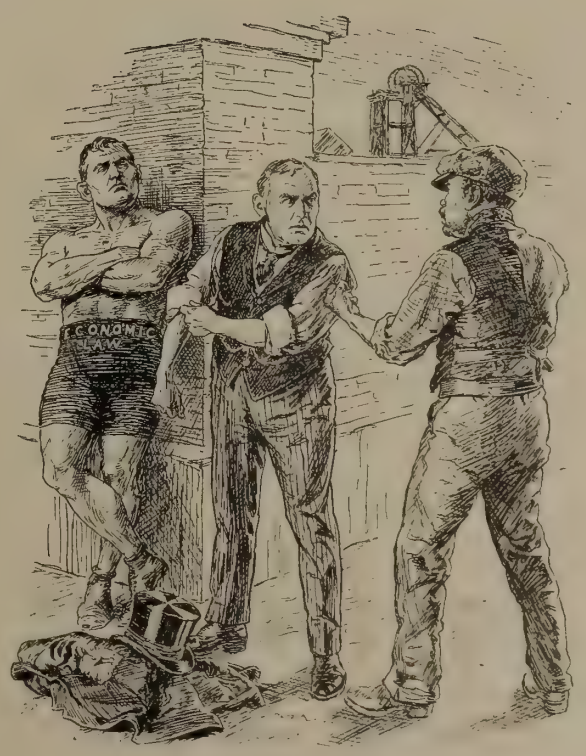
We are in this fight till we win---or Hades freezes over.

In 1920 we voluntarily gave our men a ten per cent increase. They agreed that this took care of the then high cost of living. Everything was fine, they said.

Now, with the cost of living materially reduced, they asked an increase of 36 per cent---working four hours less.

These demands were entirely at variance with the trend of the times. Employees in other industries are meeting the new conditions loyally by accepting reductions. We, on our part, shall continue the fight because we are right. The men, on their part, will continue the fight - if they do so - because agitators from the United States order them to.

Another thing---only the Open Shop in future. In recent negotiations the pressmen offered to return if we dismissed our present employees who stood loyally by us. Nothing of that kind doing. We will go out of business rather than betray loyalty.



UP AGAINST IT.

CAPITAL TO LABOUR. "YOU MAY SUCCEED IN KNOCKING ME OUT, BUT DON'T FORGET THAT THEN YOU'LL HAVE TO FIGHT A CHAMPION THAT NO ONE CAN STAND UP AGAINST."

—From Punch

How Lumber Situation Stands in the West

Shingle Mills in British Columbia are Busy—Tendency of Logs to Decrease in Value—Prairie Trade May Soon Show Improvement—Good Demand for Lath

It may not be exactly in the form of crumbs from the rich man's table, but there is a little unexpected business being received by B. C. coast lumber manufacturers at the present time that could be classed more in the nature of a windfall from the rich uncle. In this case the rich uncle is the U. S. market, on both coasts and the wind which has made the orders fall into the hands of the B. C. lumber manufacturers is the strike of ship's crews on vessels in all Pacific ports of the U. S. This strike has been going on for some time now, and is apparently making little progress toward settlement. Meantime it has been diverting so much shingle business for the Atlantic coast to the shingle mills in this Province that they are all busy and are running day and night in many cases. Orders totalling many millions of shingles for New York delivery have been placed recently, and are still being placed. The operators in most cases claim that the rates paid are not profitable, but, nevertheless, they are accepting the business, and it is therefore fair to presume that there is at least a slight margin in it, though cedar logs and bolts are still held high.

An Interesting Feature of Trade.

One of the interesting features of this Atlantic trade is that mills which have been unable to get into Eastern markets because of lack of dry-kiln accommodation are getting their full share of the present waterborne trade. The reason is that cargo shipments go by space, not by weight, as rail trade, and a thousand shingles is shipped at 75 cents, whether kiln-dried or not. Now that returns are coming in from earlier shingle shipments by water to the Atlantic seaboard, it is said that undried shingles have arrived in perfect condition, apparently having had sufficient time to make and become fully seasoned on the voyage. Whether they have 1 st weight sufficiently to compete with the kiln-dried stock in case of reshipment by rail inland from the Atlantic ports is not stated.

Bookings for cargo space for shingles have been taken well ahead of sailing dates of all regular steamers to the Atlantic. So far shipments to Montreal and Eastern Canada by water have been slow to materialize, though some business is waiting, and the C. G. M. M. Canadian Carrier is fixed for a cargo to Montreal as soon as she loads.

Atlantic ports are not alone in looking to B. C. mills for their immediate pressing lumber requirements. California, which usually gets all its lumber importations from Washington and Oregon mills, is now placing orders in B. C. A week ago one California firm placed an order for 3,000,000 feet through the H. R. MacMillan Export Co., Ltd. This was for No. 1 and No. 2 common.

The shipment will go south on the first steamer despatched in the new service the C. G. M. M. is instituting between B. C. and California ports. S.S. Canadian Importer, en route from Australia, is to be diverted for the time to the new coast service, and will take out the first cargo. The C. G. M. M. has announced that the Canadian Rover, which left Galveston, Texas, on May 28 for Ocean Falls, B.C., with a cargo of sulphur and is due to arrive June 25, and the Canadian Observer, are fixed for the new California schedule after arrival on this coast.

Lath for the California trade are also in big demand at the present moment, and heavy shipments south have been made on a $4.25 basis, which is very different from the prevailing high figures of a year ago, which were more than four times that price for a time. The southern market is reported as bare of lath stocks, and there is a small boom on in home building in Los Angeles, Sacramento and other Californian centres. The B. C. trade is slightly handicapped by the coast freight rate of 45 cents on lath, while the rate out of Columbia River to California ports is 37½ cents—when they can ship. Other lumber orders are in sight and are likely to be placed if there is no change in the marine strike situation. Even Mexico is finding that she cannot buy lumber from Pacific Coast States, and inquiries have begun to come in from that country.

Seetles Status of Wholesalers on Tax.

A confirmatory leter from R. W. Breadner of the Dominion Taxation Office, Ottawa, has been received by the Vancouver office of the Pacific Coast Shippers' Association on the vexed question as to whether the wholesalers were entitled to pass along the 2 per cent. tax charged by the lumber manufacturers. Mr. Breadner wired last week, in reply to representations by the wholesalers, that they could invoice the 2 per cent. and pass it along. His letter makes the ruling definite and of record. This puts it on exactly the same basis as the 1 per cent. ta imposed last year. According to the interpretations put on, the new act, when it was first received on the coast, it was clear that the manufacturers could invoice the 2 per cent. to wholesaler or retailer, whichever he was selling to. But it was held that the wording of the act was such that the wholesaler could not compel payment, as there was no definite order to the retail lumber dealer to pay other than direct to manufacturers. Hence the interpretation officially made now by Mr. Breadner clears the field of confusion.

There is a definite tendency for logs to gradually lower in price on the coast market, though no official changes have been made in ruling quotations. There has been an increase in the stocks held in booms at Vancouver and Fraser River points, and quite recently a good number of tows which had been held in up-coast shelter bays for two weeks or more by rough weather have been arriving to add to the visible supply. One cause of increased stocks in the Fraser River is the annual high water, making towing, in face of flood conditions, almost impossible. This high water began early this season, much earlier than usual, and it generally continues during June and July. That will to a certain extent prevent fresh supplies reaching mills on the river. The big Miami Corporation operation on the Lillooet, back of Port Haney, on the north bank of the Fraser, will, however, be able to drive down stream to all the mills at the Royal City and below.

Demand in Rail Trade is Improving.

Noticeable improvement marks the rail trade, principally from Eastern Canada, during the past few weeks. This applies in particular to cedar and spruce siding and to finishing grades of fir. There is a great deal yet to be desired in the rail trade, as the competition of Southern pine is still a severe handicap, the B. C. lumbermen find. The prairie trade might at any time now show some definite return to life. Hitherto this season business has been confined severely to sorting-up orders, as many as thirty specifications for one car being noted in a single order. While everything promises fairly well, those who are in closest touch with the prairies are not at all optimistic of any general revival of lumber demand from the Western Provinces this season, even if a good harvest were assured. There has been a little flurry in silo stock, in part due to the efforts of the Western Retail Lumber Dealers' Association to work up a campaign to sell "2,000 silos in 1921." The farmers needthe silos, as they are going in more and more for dairying and mixed farming, and the use of the silo has been successfully demonstrated on the prairie, but the idea the farmer has is that lumber for a silo should be very inexpensive. Firms with a reputation for making a good silo do not find themselves able to hook up with orders on the basis of their quality.

Japanese Business is Falling Off.

Reports now are that the Japanese market is overbought. The Japanese have been buying re-saw mills and re-manufacturing the squares into sizes suitable for their local trade, which has now fallen off. The activity is ascribed in part to the rebuilding of Tokio after the big fire of earlier in the year. Thattemporary impetus has run its course. Eleven million feet of railway ties and timbers for Newchang, China, have been occupying the export mills to a certain extent. One cargo of 5,100,000 has been despatched by the Canadian Highlander of the C. G. M. M. The other cargo is to load directly. S.S. Canadian Inventor has about completed her cargo of lumber for South Africa.

Coast lumber manufacturers are prone to believe that they are living from hand to mouth, and that their visible means of support are not about as precarious as the fabled ravens which fed the prophet. However, with one small source added to another, the industry has been keeping going in better shape than anticipated earlier in the season. True, no mills are running to capacity, and the large logging camps are only opened in part, if at all. But the total output, both of logs and lumber, is steadily increasing. For the week of June 5 the cut exceeded orders by 1,564,000 feet, or 6.27 per cent.; it exceeded shipments by 2,624,000, or 10.52 per cent.; while orders exceeded shipments by 1,060,000, or 4.53 per cent. The reports from Mountain mills are less reassuring, while from northern B. C., along the lines of the Canadian National, the reopening of mills is very slow.

Experiment in Camp Teaching Endorsed

Work of the Frontier College Commended by "The Post," Liverpool, England —Teacher Must Share Hardships aud Dangers of His Pupils

I have been reading a very remarkable book by Alfred Fitzpatrick, the principal of the Frontier College, a remarkable institution called into being for the purpose of forming educational systems amid the very backwoods of Canada. It challenges a comparison with the daring progressiveness of the New World and the slow, cautious, steady and conservative methods of the Old. In "The University in Overalls," published by the Hunter-Rose Company, Toronto, ($2), Mr. Fitzpatrick shows that classes must be held not merely in the schools and universities, but in the workshop, in the camps, fields and scattered places of the earth where men gather to earn their bread. The author boldly holds that the ambitious teacher who wishes to have a successful class in a workshop, or a camp, must work, like his pupils, at the trade itself, share its hardships and dangers, and so having won his pupils' respect by his skill and pluck, lead them into those vast fields of knowledge, from which so many of them have been shut out by poverty, and so many more by their own wilful negligence.

It is a daring though not irreverent picture that Mr. Fitzpatrick gives when he writes: "The Nazarene went with his students to their work and taught them how to land a catch of fish, how to handle a boat in a storm; as well as how to heal and comfort the sick." It gives us a new light on Messianic theology not without its charm and beauty. He warns the teacher against getting a light job, if he would win the respect of the men he wishes to teach. "There is a certain prejudice against men who do not engage in the regular routine of the work in hand. There is danger of being classed with the several parasites who shadow the workman for the sole purpose of exploiting them. Even a welfare agent may come under suspicion.

"Coming into the camp I was directed to the tent where the instructor bunked along with four or five other laborers, and soon I greeted my chum. In appearance there was nothing of the college man about him. At sight no Alma Mater would have claimed him. Without doubt nobody who had any acquaintance with students would have supposed that two months previous he had carried off a scholarship in philosophy. The fellow I greeted was a navvy pure and simple, and he certainly looked the part. During my stay at the camp, however, I learned that the influence of the college had exerted itself even among mule drivers, scraper-holders, graders and ditchers."

The Aloofness of the Settlements

That the author has a very democratic outlook can be realized from the above, but his view on the field for a woman instructor is even more remarkable. I hate giving quotations in bulk. It is never completely fair to the author, because naturally he wishes to sell his book, and sometimes a few quotations can give the gist of it. But I cannot help quoting the following because withtout it my remarks on our various settlements and hostels would be without point.

"At these times, too, more than ever the university women must give fuller heed to certain duties too long neglected. Community service has daily widened its fields of usefulness. When will the woman graduate see that with her mind enriched partly by public expense, and with her broader vision, she has an obligation to go for a time—not just as a supervisor and welfare agent—but as an actual worker and teacher in the shirt factories, the cotton mills, the crowded offices, or where, amid machinery and clatter of activity, women workers, too often lacking her acquirements, are herded together. The woman graduate, as such, who is continuing her studies may well receive credits towards her degree on her manual work, as she strives for a time to make more wholesome the lives and outlook of those whose days are spent in sorting and parcelling, in sewing a garment or tending a loom. If misguided youths in camps needs the presence of the university instructor, even so does the conversation of a band of girl employees in a mill group need direction. Too long have women graduates left the leadership in such matters to minds less fitted to guide."

Mr. Fitzpatrick has put his finger on the weak spot not only on the work of the Canadian woman graduate with a mission to teach the ill-trained, ill-educated workwoman, but also on the English system as applied in London, Liverpool and Manchester. We must realize that in the beginning the teacher must seek his or her pupils. Even when some-benevolent person conceives the idea of founding a University Settlement in a district of some slum such as Hoxton, the south end of Liverpool, or Ancoats, Manchester, the place stands aloof from the ordinary life of the people. More often than not the teacher, a man or woman, with great ability, tact and knowledge, through some innate shyness or other defect of manner, hesitates about visiting the homes of the people to win their confidence in order that the children may visit the settlement to gain the benefit of its teaching. I used to teach at one myself in a certain district of London. Looking back, I can see that I adopted, perhaps unconsciously, the very best method of getting the attention and even warm interest of my class. I taught them history not as it is given in the dry-as-dust history books, and I purposely gave as little attention as I could to the drum and trumpet chronicle of kings and warriors. I began with the life in that very district from the time when time is reckoned as Periods and Ages, gave them a description of the fauna and flora, that is the animals and vegetation, and after showing them pictures of the mammoth, the gigantic lions and tigers, the size of our present elephants. When I told them stories of how these animals, with gigantic lizards, twenty times as large as a full-sized crocodile, roamed up and down the woods which filled the Thames Valley, on which the modern London was built, how the primitive man lived in caves or bushes, like the bushmen in Africa, and how he had gradually progressed through the long ages to his present state, and when I took them to South Kensington Museum on a Saturday to see the skeletons and fossils of the cave man age, you may rest assured that my pupils saw that there was more in history than the mere birth and reign, and death of kings and queens.

The New Movement and the Old

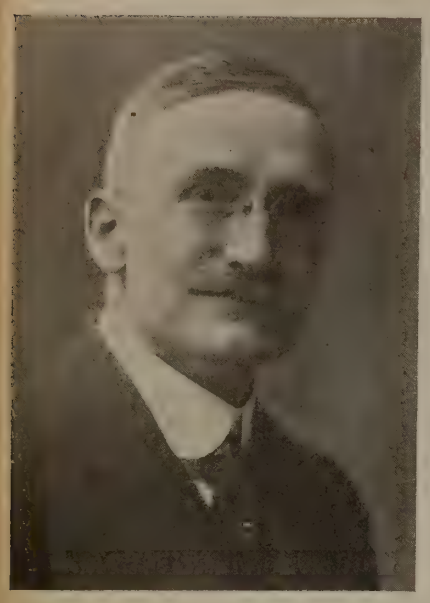
I was free of their homes because I was one of themselves. Although I have earned my bread as a journalist and author for over twenty-five years I have always regarded my self just as much a workman as I was in those days when I wore an apron, squared a lithographic stone in a machine and superintended a "five thousand run" or the printing of five thousand circulars or whatnot. But your University Settlement teacher can never have this feeling. To begin with he knows no handicraft or trade, beyond teaching. He would be as strange in the midst of a workshop as the average workman would be in the midst of a university.

In my early days the dream of the greatly daring workman (more often, the work lad) was to get away from the workshop to the office, the college, perhaps the university and then escape the thraldom of manual labor for ever. We who had toiled and moiled in the workshop or the foundry had none of these illusions, or hypocrisies about the dignity of labor so often talked of by popes, kings, princes and political economists—in other words, by those who knew nothing of its hardships and its scanty reward for service to the community. We knew that the dignified side of labor was the looking on and watching other people do it. I once said in jest to a friend that it ought to be an axiom of political economy that for every man that would take on the navvy's work of breaking up the streets for four shillings a day, one would find fifty men who would look on and watch him for nothing. But I have since felt and seen that was a sub-conscious protest against my fourteen years' hard labor in the workshop begun at a time when certain bumptious so-called labor leaders of my acquaintance were either in the cradle, or were not in existence. Hard work without education, music, a knowledge of some of the arts, what is that but the life of a brute beast?

I have a dream on the other side of lads and young men who will temporarily leave the workshop for the college and the university and then come back to enrich the minds of their mates by a new and vigorous culture, which will make for spiritual, intellectual, and material happiness; of workmen graduates coming back to hold classes in various subjects in the very workshops in which they once labored, and of a host of new University Settlements staffed by ex-workman teachers, who will give new life, new vigor, nay even new honesty, as well as a broader, more enlightened outlook than that which has previously existed. What the working class suffers to-day is due to its own ignorance. Once they realize the real strength and wisdom that education alone can give, the little pedantic theories of the curled darlings trained at Eton and Harvard that labor is unfit to govern will soon receive their quietus.

For the first time in the history of Canada a settler has been given a jail sentence for setting out a fire which eventually did great damage. In the Sudbury Police Court recently a settler was sentenced to one month fo rstarting a fire which eventually destroyed half a million of pine.

Mr. McBean Had Enjoyable Holiday.



John A. McBean
Toronto

John A. McBean of McBean & Verrall, wholesale lumber dealers, 15 Bathurst street, Toronto, returned the later end of May from a five months' visit to California. Mr. McBean, who was accompanied by Mrs. McBean, reports having had a delightful tour in the Southern State and visiting numerous points of interest. He motored many thousands of miles over the finest tar macadam roads and witnessed mountain and marine scenery that will live long in connection with the delightful associations of the trip.

When Mr. McBean takes a holiday he believes in taking a real one. He did not receive a business letter from his firm in Toronto in all the time that he was away, so that he knew nothing of whether trade was good, bad or indifferent. He enjoyed complete relaxation, and it was only when he returned to Vancouver early in May that he became aware that things were pretty quiet in Canada, as well as in British Columbia.

Early in the year Mr. McBean called upon several hardwood firms in Los Angeles and found that they were only doing about 50 per cent. of the normal amount of business. The cheaper classes of houses costing from $3,000 to $4,000, put up quickly and with little thought of permanence, were going up in many sections, Douglas fir being used principally for construction. The $10,000 to $15,000 residences, in which hardwood flors and interior trim are used, were not being built at all, owing to the prevailing dullness. On his way to Toronto Mr. McBean stopped over at a number of points. He spent most of his time at Redondo Beach, Cal., which is known as the "Carnation City," and had the pleasure of meeting a number of Canadians.

Camps May Still Be Improved Upon.

It is pleasing to note that improvements are gradually being made from time to time in the lumber camps of the various parts of Canada. The tendency in the way of sanitation and equipment has been in an upward direction for some time.

Some years ago there used to be rather a coarse and unpalatable menu, but to-day all the delicacies of a modern hotel are served at the meals, although possibly not in quite as dainty and attractive a style. The food, however, is good, wholesome and abundant, the meats, vegetables and pastry, as well as the different stews, being exceedingly well prepared. The only complaint now heard, if any at all, is that the meals lack variety, but this is not a serious objection, considering that the camps are located many miles from the larger centres of civilization and practically all supplies have to be bought ahead for many months.

In time no doubt the same advancement and evidence of progress and convenience will be manifested in the sleeping arrangement and sanitation facilitis of the camps. Already many of the more considerate and progressive companies are using single iron beds with springs and mattress.

Writing to the "Canada Lumberman," one who recently visited the camps of a none too progressive logging concern, says that it is time that the name "bunkhouse" was dropped and the term "sleeping quarters" or "dormitories" used. "In one bunkhouse that I visited last winter there were seventy-five men sleeping, and most of their clothes, especially their socks, was drying at the same time. There was great need for more ventilation, which is secured in part by several ventilators in the roof. There were 24,750 cubic feet of air space in this bunkhouse, with an average of about seventy-five men sleeping in the building every night. This allows each man only 320 cubic feet, and as 600 cubic feet per mon is considered necessary, it would appear that the ventilation of the camp was insufficient. The bunks are built around the sides and at one end of the building in two tiers, upper and lower, and two men in each bunk, do not afford desirable sleeping quarters. Any form of vermin can spread with the greatest disease, and some of the men are never free from pests which soon communicate themselves to all the men in their bunks. An attmpt was made to get rid of the vermin by means of fumigating with a mixture of sulphuric acid and sodium cyanide, which produces hydro-cyanic acid.

"Then, again, the stables were located too near the lake so that the water supply was in danger of contamination, and all refuse from the kitchen drained into the same body of water, which was undesirable. In the spring and summer this refuse would be a breeding-place for flies. No bathing facilities were afforded in the camp, and while there were two tubs, these receptacles were supplid principally for washing cloths. Surely it is time some of our camps made a little more progress than those I have outlined."

Minimum Wage for Lumber Employees?

Peter Heenan of Kenora, Labor member in the Ontario Legislature, announces that he will introduce at the next session of that body legislation providing for a minimum wage in the lumber and pulpwood industry. He is already busy upon framing the bill with a view to starting it early and building up support for it.

Mr. Heenan believes that every industry making use of public resources for its raw material should be required to pay a minimum wage bill that will approximate, at least, a standard of living as laid down by the "Family Budget" issued at Ottawa. This idea is to apply to sawmills and pulp and paper mills at the outset. Mr. Heenan states that the measure will not deal harshly with any enterprise and added that he thought, if an employer objected on the plea that he could not pay the minimum wage without operating his business at a loss, then the Government should have the right to step in and get at the facts. If it appeared on investigation that there was ground for the objection, then it would be for the Government to make concessions to the employer in the way of reduced dues on timber to enable wage increases to be made up to the minimum.

According to Mr. Heenan, the proposed bill would give the Provincial government power to take these measures where it was found that the inability of an industry to pay fair wages was due to inefficient management.

New Lumber Yard Opened in Hespeler.

Robert Stewart, Limited, of Guelph, have opened a branch yard in Hespeler, Ont., and have secured the premises of the old shoddy mill across the G. T. R. tracks from W. A. Kribs, Limited. On this site is the old mill, a two-storey stone building, 350 ft. long and 60 ft. wide, besides about 10 acres of land. The G. T. R. runs through the property and the C. P. R. is right across the road. Robert Stewart, Limited, are putting in some small machines at the start and equipping the yards and sheds with such stock as is required in an up-to-date lumber yard. Fred W. Plank, formerly of the Frank H Harris Lumber Co., Toronto, who has had some twenty years' experience in the retail and wholesale lumber business, will manage the new branch yard in Hespeler.

Hard to Size Up the Outlook.

There is considerable uncertainty regarding the pulpwood situation at the present time. The market is just beginning to assume a little life in Quebec and contractors are unable to tell in what direction it will continue. Speaking of the future, a leading operator said this week that one thing is sure, and that is that the pulpwood cut for next year's delivery will be appreciably smaller than it was last year, but, on the other hand, the mills seem to be generally well provided for in the way of stock, and besides this are running on a reduced scale. "We are watching the market carefully," declared another dealer, "but within a month or so expect to be in a better position to size up the situation."

Miramichi Mill Owners Convene.

A recent meeting of the mill owners of the Miramichi district was held at Newcastle, N.B., at which there was a large and representative attendance. Matters of a routine character were discussed and most of the operators present said that they had carried out minor repairs to their plants, which are working ten hours a day. Some mills did not start up until the latter part of May. During the month of May there was no word of any lumber being shipped to the Old Country, and it was reported that prospects do not appear to be very bright. As a result, most of the millyards are so piled up with lumber that it is a question if they will operate to anything life full capacity this season.

New Addition to Lumber Office.

Frank A. Bowden & Sons, Limited, Greenwood avenue, Toronto, have completed a one-storey brick addition 25 ft. x 30 ft. to their office, tripling the available space. The former office has now been converted into a private office and the new quarters of the company are up-to-date in every respect.

Giving Consideration to the Truck Problem

Representative Lumber Retailers Tell Why They Make Use of Motor Delivery—Better Service, Expeditious Handling and Greater Economy

At this particular time of the year many a lumber retailer is considering whether it would pay to instal a truck for use in his business? In personal interviews with lumber concerns there is a general concensus that a truck pays the retail dealer in a large city in many ways. There the roads are good, deliveries frequent, long distances covered and modern means of loading adopted, so that no time is lost. In connection with the business of a retail lumber merchant in a town of from 2,000 to 15,000 inhabitants, where a large country trade is conducted; streets not paved beyond one or two leading thoroughfares; the mud deep; the roads bad and the snow a perfect barrier in the winter-time, does it pay him to employ motor delivery? These are items to which the average forest products dealer must give consideration. Naturally he weighs everything from an economic and service standpoint before making an outlay and venture of several hundred dollars. The next point to which he must give thought, is the practical economy and ability of the truck to do its work, efficiency of the maintenance and inspection system, efficiency of routing and delivery, the skill of the driver and his willingness to perform his work, etc.

Many arguments are advanced by the small retailer why he adheres closely to the horse and waggon delivery as against the motor service. The advocates of the latter are equally as energetic in upholding the modern means of transportation afforded by the up-to-date truck.

The Pros

Recently the "Canada Lumberman" secured interviews with a number of representative lumbermen throughout the East. It is interesting to read the conclusions pro and con. Let the pros speak first, and here follow some strong points advanced:—

"Yes, I believe it would pay me to put on another one or two-ton truck owing to the high cost of labor and its inefficiency. Our truck does the work of two horses and costs while in operation about the same."

"Motor trucks show a great saving over horse delivery on the long hauls. On short hauls the difference is not so great but is in favor of the truck if road conditions permit of their use."

"Service on delivery can only be accomplished by rapid transportation. In the long hauls we consider the motor truck is the only means."

"We think the motor truck can be used to good advantage, especially in the summer. The winter is the only difficulty that looms up in the service."

"I am very much in favor of motor trucks in comparison with horses, as I consider them by far the cheaper, both as to upkeep and saving of time and labor, which is a great item in the cost of conducting business at the present day."

"You might as well be out of business as out of date and the truck delivery has come to stay. It is quick, serviceable, business-like and impressive. No time is lost, and for economy and efficiency, we have no fault to find."

"We find that the cost of upkeep is about the same as for a single horse and waggon, but the deliveries are two, if not three times as numerous. There is no trouble about a holiday or Sunday feeding or any such difficulty as disposing of the stable refuse."

"We find the greatest advantages of trucks are that they enable us to give more prompt delivery to our customers. We can take business that would be too great for horse delivery, and that one man driving a truck can deliver two or three times as much lumber in a day as he could with a team excepting, of course, where the trips are short. In the winter-time when business falls off, we can lay up what trucks we do not need and when they are not in use they do not have to be looked after. The only expense that can be charged against them when not in use is interest on the investment, while horses have to be fed whether at work or not."

The Antis

These are only a few of the arguments advanced in favor of trucks. In order that the other side of the picture may be presented, the following are opinions gleaned from representative retailers:—

"Our season is too short to make the use of a motor truck profitable for delivery in view of us keeping both horses and truck."

"We do not see how we could use a motor truck in the winter-time, as the snow stays where it falls till the sun moves it in the spring-time."

"We have too many deliveries off pavements and do not think trucks are any use in the deep snow. We have considered the matter on different occasions. We have six horses and believe a truck would be of good advantage except in the winter when it would be of no real service to us."

"For mixed loads on short hauls horses are better. Depreciation on horses is much less than that of truck, and the upkeep much less proportionately for the service obtained. There are a good many places where a horse can go where it would be impossible for a truck to make a delivery. Team haul answers our purpose more economically and satisfactorily."

"We have a number of deliveries where we have to haul over new ground to get the material as close to the buildings as possible, and in many cases we could not get to it with a truck."

"On unloading from the cars and delivering, we use one horse and two waggons, and can handle more material that way than we could with a truck, and most of the time is taken up in the loading and unloading."

Well Satisfied with Truck in Logging

As stated in a former issue of the "Canada Lumberman" W. J. Foster, lumberman, of North Bay, who is well known in the Nipissing District, used a motor truck and sleighs in his log-hauling operations during the past winter at Wasing on the Canadian National Railways. The sticks hauled were principally hardwood and the distance was

Drawing timber in the bush with truck and sleighs

some 3½ miles. Two trucks were used and as much work was done with the two in hauling as could be carried out by six teams of horses.

The accompanying illustration shows a truck hauling a sleighload of logs, although on the majority of trips two sleighloads of logs were hauled. By means of a truck and two sleighs, 60 to 70 logs would be moved on a single trip. About half a million feet were drawn to Mr. Foster's mill at Wasing within two months and the cost was much

Putting Motor Truck to Its Hardest Test

Until recent years, patches of standing timber were to be found in sufficient quantity in most sections to warrant the movement of saw mill establishments to the heart of these wooded districts, thereby greatly simplifying the problem of getting the logs to the mill, says F. W. Fenn, secretary of the National Motor Truck Committee of the National Automobile Chamber of Commerce.

In such logging camps the natural difficulties, preventing the use of improved methods of transportation, operated to make the crudest methods the most economical. Thus the sled was used to its best advantage. Often the logs were dragged to the mill by horses and oxen, and in broken country the logs were skidded down the mountain sides to the mill below. If the mill was situated near a navigable stream, the logs, in raft formation, were transported from great distances up stream by the current. Thus the cheapest known means of transportation were utilized to their fullest extent. Later, as the price of lumber advanced, the larger mills found it profitable to construct steam railways for transporting their logs.

With the passing of these great stands of timber and the consequent increase in the price of lumber, abandoned mills are now finding it profitable to gather isolated logs, scattered over a radius of from twenty to thiry miles, by transporting them over the many roads now established, and it is here that the motor truck finds its place.

Whether a lumberman, after disposing of his mules and horses,

n operate a motor truck or fleet of trucks successfully, depends, of urse, on the location of the standing timber he is cutting, the con- tion of the roads in the vicinity and the average length of the hauls. he relative distance of a tract of timber from established transporta- n almost always determines the type of equipment which could be ed most profitably in bringing the logs to the shipping point.

Tractors, horses and yarding engines have been found very fective in the logging of tracts situated near a railroad or running eam. I would not advise the installation of a motor where these thods are better suited; but when timber must be hauled many les through forest paths or over rough country roads to a railroad navigable river, it is certain that a motor truck will be found the st satisfactory unit of transportation.

Various parts of logging can be standardized. Every operation, wever, has its individual characteristics and unusual conditions. he successful co-ordination thereof requires careful analysis, great ll and experience. It would be unwise to attempt the logging of large tract of timber a long distance from transportation with a rding engine and horse team. Equally erratic would be the con- uction of an expensive railroad many miles for one claim of timber. st certainly the railroads and modern equipment are indispensable the successful maintenance and economical handling of large erations, and it is equally true and certain that the fundamentals well established in motor truck and trailer logging.

It is human for men to be influenced by the success or failure others. Unfortunately the controlling conditions which determine ccess or failure are not always carefully analyzed, and men boldly ter, or timidly retire, without giving their individual operations the cessary analytical thought; and if they are unskilled and inex- rienced, they neglect to secure expert advice from those possessing actical knowledge. Numerous novices in the logging and trucking siness have been innocently misled and induced into hauling logs th motor-trucks by well motived but over-zealous truck salesmen o have observed and compiled statistics upon good successful erations, leading the novice to the general assumption that all ses are similar and possess equal merit. Some have failed because lack of experience, improper roads, insufficient capital, because of wing made contracts for hauling at far too small a figure; some cause logs were not furnished regularly for loading and hauling, developing that the operation was not properly balanced. Many ers are meeting with pronounced success with this kind of equip- nt. Four years ago this system was virtually unknown. At sent it is estimated that we have in the northwest, where the ber is large and formerly considered too heavy for such conveyors, rly 500 trucks and trailers hauling for distances of six or seven les.

It has been demonstrated that a five-ton truck with an eight and -half ton double bunk trailer can average carrying of 4,000 feet load. Many loads of 5,000 and sometimes 6,000 feet are trans- ted on this equipment on good private roads, as officials are ally wisely exacting in the weight of loads hauled on publicly structed rights of way. This calls attention to the advisability securing as light equipment as consistent with safety in maximum ds, the weight of equipment being considered part of a road load. truck and trailer will carry an average load of 4,000 feet, can be ded in from 10 to 15 minutes; therefore, it is not difficult for one perienced in logging to analyze his particular operations, secure proper logging and hauling equipment and have it all well bal- ed and associated.

Breezy Notes of General Interest

L. Vachin is rebuilding his sawmill at St. Joseph de Beauce, Que., ich was recently destroyed by fire.

A report from Campbellton says that a dozen lumber mills in stigouche county have resumed operations.

A charter has been granted to the Globe Lumber Co., Limited, ntreal, with a capital stock of $20,000, to carry on a general lumber siness.

The Dominion Pulp Mill at Chatham, N.B., which has been shut vn for a number of weeks, resumed operations on June 5. The mill ploves 250 men when in full operation.

Stetson, Cutler & Co.'s sawmill at Indiantown, St. John, and wn as "The Big Mill," was shut down recently after a few weeks' ration. It will not resume sawing until market conditions pick up.

Reports of the lumber industry in the Province are not very en- raging. In some places famous for lumbering operations there is le activity, while in others work is being carried on despite the avorable outlook. A visitor in St. John recently said that on the pique River for the first time in upwards of fifty years there has n no drive below the town of Plaster Rock. In former years, be- sides a general drive, there was a large amount of rafting done, but this year only a few rafts have come from that district.

The St. John Log Driving Company have established a record this season, having the river clear of logs north of Woodstock before June 1 . They expect their driving operations to be completed in the near future and all the logs placed in the Douglas booms.

The building returns in Toronto showed during the month of May permits to the value of $3,100,000 were issued, as compared with $3,000,000 duringthe corresponding month of last year. The permits included 310 dwellings valued at $1,200,000 and 330 garages valued at $100,000.

Work is already started on the new 50-ton groundwood pulp mill, which will be erected at Dixon's Creek, near Haileybury, on the shores of Lake Timiskaming. The company, which are putting up the new mill, is the Timiskaming Pulp & Paper Co., and excavation for the foundation has already begun.

Jones & Glassco, Registered, of Montreal, have been appointed sole representatives for steel belting in Canada. Whilst this belting is new in Canada, many large industrial plants in England are users of this specially constructed steel belting for transmitting power. Full particulars will be given by Jones & Glassco.

Planahome Manufacturing Company, Limited, Winnipeg, Man., was recently incorporated to manufacture and deal in a device called "planahome," and to deal in all kinds of building materials. Capital, $20,000. Two of the incorporators are S. T. Layton and F. H. Mitchell, both of Winnipeg, Man.

A recent heavy downpour of rain put out forest fires which did several thousand dollars damage to Nova Scotia woodland. Forest rangers in Colchester, Cumberland and Hants counties report that, barring u nforeseen incidents, danger to the forests of Nova Scotia is now practically over.

Andrew T. Dunlop, a well-known lumberman, died at his residence, Millville, N.B., on June 4, following a lengthy illness. He suffered a stroke of paralysis about two years ago from which he partly recovered. He is survived by his wife and a family of ten children. He was born at Upper Haynesville in 1846.

Just how long the mills will continue running is problematic, as a large number of logs were left in the woods, and the total cut was the smallest in many years. There are millions of feet of lumber piled up awaiting a market. What is being shipped from the north shore and the port of St. John is for contracts made some time ago.

A report from Douglastown on June 5 says that the Miramichi Lumber Company's big mill there has resumed operations for the season, the employees' union having acquiesced to a ten-hour day for the present. Newcastle mills are also reported ready to resume sawing operations and the Nelson mills are already operating.

In a forest fire which broke out near Kapuskasing, Ont., the supplies of the Spruce Falls Company's pulpwood camp were burned. The men and a number of horses escaped on a special train, but ten animals were lost. Pulpwood piled on both sides of the railway tracks for three miles fell prey to the flames.

The Detroit Sulphite Pulp & Paper Co. has commenced shipping spruce pulpwood from Port Arthur to Detroit. The loads are being taken on at Nipigon Bay. Chas. W. Cox of Port Arthur, who has been in charge of the camps of the Detroit Company all winter, says that he expects to export 20,000 cords of wood for the firm during the present summer.

The Gull River Lumber Co. of Lindsay, Ont., say that the report which went out concerning a vre in their Stanhope township limits was incorrect. There were some fires in the neighborhood, but the Gull River organization escaped without loss. The operations of the company during the year will be up to the average and the output will perhaps be a little larger. Their mills are lacated at Coboconk.

Lumbering operations in the Province of New Brunswick continue despite the fact that there is a poor market. There are a number of mills throughout the Province working full time sawing last winter's log cut. All are running on a ten-hour day. This for a time threatened to cause a general tie-up, but the scarcity of employment forced the men to accede to this demand on the part of employers, and everything is now running smoothly.

Large rafts of logs from the northern part of the Province reached Fredericton recently. One was consigned to Shives Company and Stetson, Cutler & Co. Another raft arrived for the Nashwaak Pulp & Paper Company. This contained 32,000 feet. For rafting purposes the Nashwaak Pulp & Paper Company are using some novel machines. They have an electric loade r and augers driven by compressed air, and they are performing efficiently.

Mr. Champoux Speaks of Quebec Conditions.

David Champoux
Restigouche, Que.

David Champoux, manager of the Chaleurs Bay Mills, Restigouche, Que., recently returned from an extended trip to Great Britain, France, Italy and Belgium.

Mr. Champoux is one of the best-known French-Canadian lumbermen, and has been for some years a director of the Canadian Lumbermen's Association. He is always present at every annual gathering and takes a lively interest in the proceedings. Not only is he interested in the Chaleurs Bay Mills, but he is also secretary-treasurer of the Metapedia Lumber Co. and of the La Compagnie Champoux of Restigouche and Quebec. He is also president of La Compagnie Coutoure & Rheault of Mont Joli, Que., and a director of the Canadian Forestry Association.

A late copy of the Canadian Gazette of London, England, contains the following interesting interview with Mr. Champoux:

"Conditions in Quebec are better than those prevailing generally elsewhere. There is very little labor trouble and very little Socialism in Quebec. I am a French-Canadian, but strongly British in sentiment, and I cannot help thinking that Great Britain is neglecting the opportunities offered for investment by the vast natural resources of Quebec. I know that the present is a bad time to talk of investing money in Canada because of the rate of exchange. But I wish to see British capital getting into the best of the timber lands. These lands are very valuable, and Americans who have a keen eye for good investments and whose own timber lands are coming to an end will surely snap up these Quebec lands if they are not forestalled by British enterprise In my opinion, paper manufacturers will within ten years be buying nearly all their pulp from Canada. We possess large supplies of raw material, but need capital to develop them.

"Industries of all kinds in Quebec have of late years made great strides. Indeed, in Eastern Canada industrial progress has been in the last fifteen years amazing. I found in Europe that people had a very poor conception of the possibilities open to industrial enterprise in Quebec Province, which seemed, up to a few years ago, to be regarded as being in the Arctic regions.

"To-day it is said that the United States and Canada are the richest nations in the world. Our natural resources have been exploited lately as they have never been before. Notwithstanding all the indications of prosperity, trade generally is bad. But in Canada the ups and downs of trade rarely effect us very seriously. Recovery from depression is always rapid. We have had a period of abnormal prosperity, and we are now going through a period of depression. But we have to recognize the cause of the trouble and to do our best to meet it. We must try to stop speculation. Moreover, we must not stop producing, this must be proportionate to the demand, and it may be necessary to change and adjust our lines of production."

Timely Work on Timber Technicalities.

The "Canada Lumberman" has received from the publishers, Wm. Rider & Sons, Limited, 8 Paternoster Row, London, England, a copy of an instructive, well-printed and admirably prepared book, entitled "Timber Technicaliteis." The work, compiled and edited by Edwin Haynes, editor of "The Timber Trades Journal" of London, contains a fund of valuable information and data of interest to every lumberman, woodworking factory, logger, forester and timberman.

"Timber Technicalities" contains definitions of terms used in the home and foreign timber, mahogany and hardwood industries, the sawmill and woodworking trades as well as those employed in connecton with architectural and building constructions. The contents stand out clearly and prominently so that any information sought may be quickly found. A general idea of the timely and edifying character of the work is found in the contents, which cover a glossary of the terms used in the trade; bibliography of timber contractions and abbreviations in use in commerce; the gain in freight on planed wood, and the actual measurement compared with the nominal; the approximate weight per cubic foot of home timber; the official weights of American hardwood timber, etc.

New Brunswick Free From Fire Menace.

It is now declared that New Brunswick is free from forest fire Last year at this time there were several hundred fires blazing awa that were being fought by crews with unceasing vigilance. To-da there are none of these forest or settlers' fires of any importance. G. Prince, provincial forester, recently gave it as his opinion that t improved condition was largely due to the shutting off on May 10 of all permits for fires in the province. There had been a gener observance of the order, cancelling all fire permits on that date, a Mr. Prince declared that it met with the approval of the insuran companies, Crown Lands licensees and others interested in the pr vention of conflagrations. This will now be followed by a campai to inaugurate fall burning of brush and thus assist in eliminating t forest fire menace.

New Gillies Mill is Working Well.

The new mill of Gillies Bros. at Braeside, Ont., is now operati and rapidly rounding into shape. It is of fireproof constructi throughout, being built of steel and concrete, and is the only structu of its kind in Canada. It is equipped with three 8 ft. double-cut Cla band mills and one 7 ft. Clark resaw, as well as a full equipment trimmers, edgers, etc. The firm of Gillies Bros. was established 1875, and has had a long and honorable history. David Gillies is t president of the company; J. S. Gillies, vice-president and managi director, and D. A. Gillies,secretary-treasurer.

New Pulp Plant for Manitoba.

It is expected that J. D. McArthur, the well-known railway co tractor of Winnipeg, who was recently awarded a block of 718 squa miles of pulp and timber land on the east side of Lake Winnipeg, w build a 100-ton pulp and paper mill on the property within the ne three years, at a cost of not less than $1,000,000. The concessiona must manufacture at least half the pulp into paper at the mill. T balance may be exported if not required for consumption in Manitol Saskatchewan or Alberta. Mr. McArthur has stated that prelimina work in connection with the enterprise will start immediately, a that the major operations, in which several hundred men will be e ployed, will begin within a few months.

Another Color Named in Pine Timber.

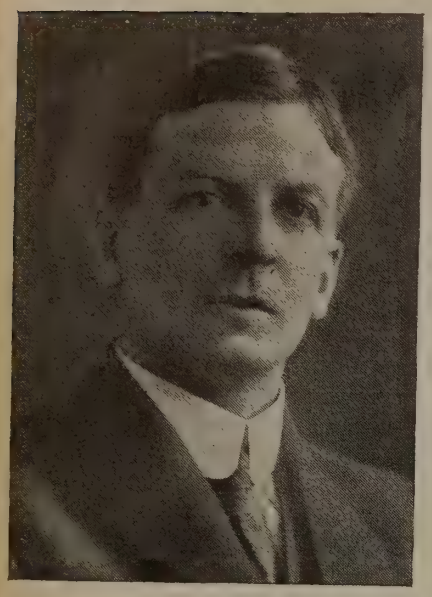
Out of the war many new terms arose and these have now be incorporated in every-day use; in fact, modern dictionaries conta not a few fresh words which became familiar through use at the fr during hostilities in Europe. By common consent and universal pr tice these new creations have become massed in the vocabulary of t populace.

Out of every great movement or from extreme periods of int sity ideas and ideals are born. Civil wars, national revolutions, ternational strife, labor agitations, tremendous floods, awful holocau and great cataclysms have proved the incentive to movements in t line of action or thought which have changed the course and cond not only of individuals, but of people as a whole. This may have b in the line of discovery, invention, the advancement of science, t application of the hitherto unknown and undiscoverable forces nature or the utilization of means that have been long standing, have never found proper expression or outlet.

So, too, the recent forest fires that early last month threate to sweep certain sections of Ontario and Quebec and do an infi amount of damage, have brought to light a new kind of wood. cording to press despatches, the "blue" pine limits of a certain w known Central Ontario company were flame-swept. Now when sufferers were asked about this new species they replied: "We inclined to think whoever indited that despatch was rather 'gre on the subject, as 'blue' pine is something entirely new to us. have heard of white pine, yellow pine, southern pine, red or Norw pine, and the fellow who pines away waiting for his lady-love. have not yet witnessed 'blue' pine, although, judging from the pres rather indigo outlook in the lumber trade and the small prospect improvement, there may be some who are quite ready to talk 'bl ruin or who will see everything in a 'blue' funk or an azure lig The stock of pine that we now have on hand may look 'blue' eno to us before we are able to dispose of it or pass it on the way to consumer, so that perhaps, after all, if things do not revive soon will really have a mental picture of 'blue' pine, if not an actual c modity representing that hue."

Alfred Gall ofthe Gall Lumber Co., who has been confined to Orthopedic Hospital, where he has undergone a couple of operati is making satisfactory progress.

Mr. MacGregor Stirs Up Enthusiasm.



Hon. R. M. MacGregor
Pictou, N. S.

One of the outstanding figures in connection with the recent meeting of the General Assembly of the Presbyterian Church of Canada, held in Toronto, was Hon. R. M. MacGregor, who represents Pictou, N.S., in the Legislature of the Bluenose Province. He took an active part in the proceedings and was an ardent opponent of Church Union, seconding the motion moved by Rev. Principal Fraser of Montreal for the amendment protesting against such a move. Speaking of his ability as a speaker, the daily press said that some telling points were made by him in a closely reasoned address, and his remarks aroused enthusiasm among the delegates.

Mr. MacGregor is equally as well known in Eastern legislative and lumbering circles as he is in the councils of the Presbyterian Church. He is a member of the Murray Government in his native Province, where he has occupied a seat in the Legislative Assembly for the last seventeen years. He was first chosen in 1904 and returned at all subsequent general contests. Mr. MacGregor was appointed a member of the Executive Council of Nova Scotia without portfolio a decade ago. He resides in New Glasgow and is a son of the late James D. MacGregor, at one time Lieutenant-Governor of Nova Scotia.

Mr. MacGregor is a member of the firm of J. D. & P. A. MacGregor, Limited, lumber merchants. Speaking of the present conditions down East, he said the lumber market was quiet and that his firm was practically doing no operating during the present season, except getting out a few hundred tons of hewn birch timber. The cut around the New Glasgow district is not more than one-quarter of what it was a year ago. Considerable stock cut for export is still unshipped, and there seems to be little prospect of immediate improvement in the export markets of either the United States or Great Britain.

Western Firms Open Service Office in East.

A. G. Wilmot has opened an office at 906 Bank of Hamilton Building, Toronto, as service man for the East Kootenay Lumber Co., Limited, of Jaffray, and the Otis Staples Lumber Co., Limited, of Wycliffe, B.C.

Mr. Wilmot is a former resident of Toronto. He left for the West some eighteen years ago, first entering the employ of the King Lumber Mills at Cranbrook, B.C., with whom he remained three years. In 1907 he went with the East Kootenay Lumber Co. and has been with that organization ever since, latterly holding the position of secretary and being a director of the company, who specialize in Western soft pine, fir and larch, lumber and lath. Mr. Wilmot and family have taken up their residence at 256 Heath street west, Toronto.

In discussing the opening of an office here, Mr. Wilmot said: "We would like it to be understood that this is not a sales office, so far as calling upon the retail trade is concerned, but is a direct mill representation of the East Kootenay Lumber Co. and the Otis Staples Lumber Co. Our business will be practically all with wholesalers, but we are also here to conduct an educative campaign and explain the merits of certain grades with which the East is unfamiliar. We recognize that Ontario, Quebec and the Maritime Provinces offer a steady market, and there are many grades of western soft pine, fir and larch with which the East is not yet well acquainted. We hope to make the trade here, which has grown large, more familiar with the uses and facilities of our products and enlarge our connection through the office which we have just opened up."

Timber Survey of Ontario is Proceeding.

Roland D. Craig of the Commission of Conservation, Ottawa, who is supervising the survey of Ontario forests, which has been in progress for some time, reports that, although the Commission of Conservation has been abolished, the work begun in Ontario a couple of years ago will not be halted.

Mr. Craig said that they have now three airplanes, 2 H.S., 2 L's and a large F-3 now in operation at Sioux Lookout on the N. T. R. Mr. Craig added: "We are photographing strips about a mile wide and sketching in the types of timber on strips ten miles wide. At present we are covering the English River pulp limits and the adjoining territory, and expect, before the summer is over, to have completed the mapping of the greater part of the territory within reach of the N. T. R. The area covered will depend on the intensity of the survey, and this depends on whether the Dominion or Provincial Government carry on the work. Ontario has voted $15,000 for its survey, which will defray about half of the expense. The Air Board will take care of the balance."

Says Retailers Are More Optimistic.

A traveller, who recently returned from an extended trip throughout the East, states that the stocks of most of the realers are low at the present time, while buying is limited. There is a better feeling prevailing throughout the trade than there was a month ago, and considerable repair work and house construction is going on. Farmers are naturally rather backward about buying at present until they see howthis year's crop is going to result and how prices will shape up this fall. On the whole, however, there is a growing confidence that business from this out will be considerably better than it has been for the last two or three months.

Operating Dry Kilns to Capacity.

The Gall Lumber Co., Toronto, report that their kiln facilities, capable of handling 300,000 feet a month, are very busy at the present time drying oak and birch, the latter for the trade in Michigan and the former for local requirements. They say that the demand for all kinds of Canadian and American hardwoods at present is limited, although some buying is going on all the time. Agricultural implement factories have been using considerable elm and maple and taking deliveries on contracts made last year. Woodworking plants, such as furniture factories, piano firms, wagon concerns, etc., are quiet, but phonograph makers have been rather busy and are using a fair quantity of veneers.

Lumberman Bridegroom Was Busily Bombarded.

John R. Carter of the Fesserton Timber Co., Toronto, and bride returned home recently after a wedding trip to Buffalo, New York, Philadelphia, Atlantic City and Washington. Mr. Carter was made the recipient of a practical joke by a couple of score of his lumbermen friends in Toronto, who, previous to his departure, arranged to see that he was bombarded with congratulatory telegrams which would arrive at stated times. The result was that he had left the city only a few hours before messages of felicitation rolled in, which kept the bellboys in the various hotels on the move until they thought the young bridegroom from Toronto was one of the busiest and most influential guests that had been around in many months. Mr. Carter soon recovered from the shock and got used to opening the yellow slips. He desires to thank all his friends who were kind enough to remember him by wire. Mr. and Mrs. Carter have taken up their residence at the "Osborne," King St. West, Toronto.

Some Big Lumber Contracts Awarded.

In connection with the awarding of contracts by the Harbor Commission of Toronto for cribwork in the development of the waterfront improvements, Timms, Phillips & Co. of Vancouver and Toronto secured the contract for 250,000 feet of rough fir timbers, 6 in. x 12 in x 20 ft. The tender for 80,000 feet tongued and grooved fir piling, d 4 s, 6 in. x 12 in. x 22 in., went to the Fesserton Timber Co., Toronto.

In connection with the new Live Stock Arena, which is being erected on the Exhibition Grounds, Toronto, 675,000 feet of dressed and matched 2 in. x 6 in. flooring is required, the length varying from 10 to 30 feet. This will be supplied in B. C. fir, and the contract has gone to Knox Bros., Limited, Montreal, who have a resawing plant at Quebec City. There is also another contract for 175,000 feet for frames and joists, 4 x 6, 4 x 8, 4 x 10, 6 in. x 8 in. and 6 in. x 10 in.

Beautifying Civic Thoroughfares in West.

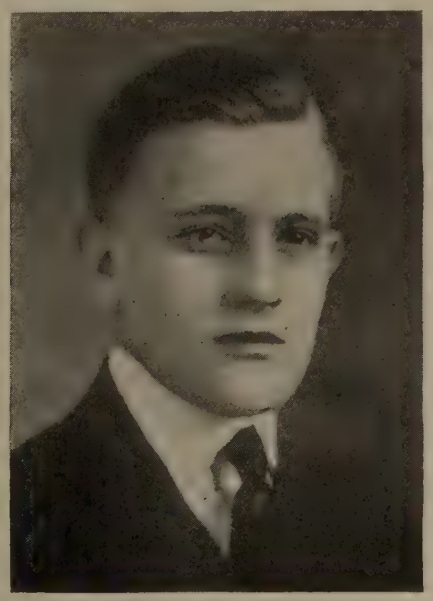
The beauty and attractiveness of any city, hamlet or rural scene is enhanced immensely by the presence of shade trees. They add loveliness to any landscape, charm to any thoroughfare and variety to any retreat. Those cities which are noted for being the most artistic and inviting have well-wooded avenues, and in no place does the welcome panoramic character and delightful association of trees appeal more strongly than in the West. The report comes from Brandon that, in one month recently, no less than 584 trees were planted on the city streets, and all of these were obtained from the civic nursery. What Brandon has been doing many other cities in the West are also doing, and adding immeasurably to the superb surroundings of the residential sections.

New Charter Granted Brockville Company.

A provincial charter was recently granted the Brockville Lumber Corporation, Limited, with a capital stock of $75,000, and headquarters in Brockville, Ont. The organization is empowered to manufacture, sell and deal in all branches of lumber and woodworking products and building material and to take over the business of the Brockville Lumber Co., Limited. The incorporators of the company are: F. B. Van Dusen, Harold F. Van Dusen, John Caruth, R. J. McLeod and G. Joy.

F. B. Van Dusen, head of the company, has been connected with the lumber business for many years. He got his first acquaintance with the industry in New York city twenty-seven years ago, and is still interested in business there. In 1910 he started out for himself and opened an office in the Grand Central Terminal Building, New York city, and since that date has continued in the wholesale line under his own name. In company with his son, Harold F. Van Dusen, he purchased some time ago from the liquidator the lands, building

F. B. Van Dusen
Brockville, Ont.



Harold F. Van Dusen
Brockville, Ont.

and equipment of the Brockville Lumber Co., and the new proprietors at once began to put the business on its feet. A portion of the old organization was also taken over at the same time and now the Brockville Lumber Corporation has an efficient and well-trained staff.

Mr. Van Dusen, Sr., who was last winter elected a director for the eastern district of the Ontario Retail Lumber Dealers' Association, says, while things are quiet at this period because of general conditions over which no one has control, he feels there are good prospects ahead, and is confident that the business is bound to succeed.

Since Mr. Van Dusen and his son came to Brockville they have discarded steam power entirely and installed electric motors for the running of all machines. They turned the engine room into a dry kiln, retaining the old boiler, and now have a thoroughly up-to-date kiln. They also installed steam heat in and are remodelling the office quarters. Practically all the old equipment of the mill has been discarded and has been replaced by new machines so that the company is in a much better position to-day than it has been for some years.

Mr. H. F. Van Dusen spends all his time in Brockville, while Mr. F. B. Van Dusen divides his attention between New York and his interests in Canada.

"Yes," concluded the latter, "all the operations conducted under the old name of the Brockville Lumber Co. will be assumed by the new corporation. We are starting off with a clean sheet and everything in our favor ready for business as soon as the present depression is past, which we feel will be in a short time."

Ontario Lumber Retailers Going to Byng Inlet.

The annual midsummer outing of the Ontario Retail Lumber Dealers' Association will be held from Friday, July 29th to Monday, August 1st, to Byng Inlet. Last year the trip was to North Bay and vicinity and a most pleasant time was spent, the lumber manufacturers in that district doing all in their power to make the excursion one long to be remembered.

This year the objective of the Ontario retailers is Byng Inlet, which is located on an arm of the Georgian Bay, 193 miles north of Toronto near the mouth of the Magnetewan River. It is likely that special cars will be placed by the C.P.R. at the disposal of the party, who will spend Friday, July 29th, at the progressive village of Byng Inlet, where they will visit all departments of the splendidly-equipped mill of Graves, Bigwood & Co. and the planing mill and other activities. The company will entertain the guests to dinner and in the evening launches will be taken and the members glide down the river to where it joins Georgian Bay. There tents will be erected, blankets furnished and a chef provided—all through the generosity of Graves Bigwood & Co. Under canvas the retail dispensers of wood products will remain for two or three days, thoroughly enjoying a rest and engaging in fishing, rowing, bathing, baseball and other pastimes.

This will be somewhat of a novel departure from previous years, but it is expected that the 1921 outing will be just as successful and delightful as any that have taken place since the inception of the Ontario Retail Lumber Dealers four years ago.

Completes Operation in Hardwood Bush.

W. J. Martin of Penetanguishene, Ont., says that he is cutting his last stock of hardwood out of the 300 acres of timberland which he purchased near that town some three years ago. Mr. Martin finished operations early in June and has taken out over 3,000,000 feet of lumber and over 7,000 cords of hardwood from the bush, which is quite a different looking spot now from what it was when visited by the members of the Ontario Retail Lumber Dealers' Association two or three years ago. Mr. Martin says the clearing is very noticeable coming in on the train to Penetang. He intends selling the equipment of his sawmill and also disposing of an interlocking semaphore system and switches and railway in connection with his railway just as soon as he is done shipping, which will be in the near future.

Mr. Martin says he finds lumber is selling rather slow at present but hebelieves that the demand will increase, as prices must be lowe but he believes that the demand will increase, as prices must be lowe winter in California and had a pleasant holiday.

American Capital in B.C. Sawmills.

A recent despatch from Vancouver says that 95 per cent. of the sawmills in British Columbia are owned and operated by United States capital; 3 per cent. owned part American and part Canadian, and per cent. are owned outright by Canadians. It is estimated in lumber circles that about $4,000,000 of U. S. capital is invested in B.C. lumber operations and sawmills. Several years ago, owing to the growing scarcity of timber across the border, many Americans came to British Columbia, where they secured well-located timber leases, erected saw mills and shipped their product back to the markets which they had known for years.

Forestry Car Demonstrations Aroused Interest.

The Canadian Forestry Demonstration Car, which has visited numerous points in New Brunswick, aroused much interest. The car is equipped with some novel and interesting attractions dealing with forest production. In the display is a splendid model of a pulp and paper mill and town. There is also a collection of articles made from wood, including stockings, woodsilk, neckties, shirt waists, bandages, paper cups, flowers and a grain sack. Moving pictures are also shown in connection with the demonstration.

Declares Railways Did Not Cause Fires.

W. A. Kingsland of the Canadian National Railways recently gave a vigorous denial to the charge of Ellwood Wilson, chief forester of the Laurentide Co., Grand Mere, Que., that a number of forest fires raging recently along the Canadian National Railways were caused by sparks from the railway locomotives, men burning ties, etc. Mr. Kingsland said that no one but Mr. Wilson would have made such a assertion and the company had started a special investigation by the superintendent of the railway construction and the roadmaster. "Our men did all in their power to assist the settlers in fighting the flames," declared Mr. Kingsland.

The settlement of the strike in the Jonquiere and Kenogami mills owned by Price Brothers & Company, Limited, says the Quebec correspondent of the "Canadian Lumberman," is altogether due to the personal efforts of the president of the company, Sir William Price, who took charge of the situation and from the beginning made it plain that his firm would not give in to the demand of the labor agitators and he won out in the struggle. Sir William Price is, without doubt, one of the largest-hearted of employers in Quebec, but he has a will of his own. Although he will not even think of doing an injustice to others, especially to wage earners, he will not suffer injustice. He was adamant in his resolution to close down the company's mills indefinitely if the employees had not, as they fortunately did, listen to reason and give in, even against the advice and wishes of leaders of the international union, who came to intimidate the workers from acceptance

Personal Paragraphs.

Alex. Blair, collector of customs at Chicoutimi, passed away recently in his 79th year. Previous to entering upon his last appointment Mr. Blair was in the employ of Price Bros. & Co. of Quebec, as manager of the lumber mill at Grand Bay and later manager of the mill at Chicoutimi, from which he resigned some years ago. He is survived by his wife, one daughter and a son.

E. F. Perry, former secretary of the National Wholesale Lumber Dealers' Association, New York, is recovering from a dangerous and complicated operation, performed several weeks ago at the Nyack (N.Y.) Hospital. Mr. Perry has been unable to attend to business since the latter part of February. The operation was in all respects successful, and last month he was removed to his home.

Joseph Patry of the Crown Lands Department, Quebec, Que., which he joined twenty years ago, died recently. He had been ill for four months. The late Mr. Patry is survived by his wife, one daughter and one son.

H. S. Fergus of the Toronto office of G. A. Grier & Sons, Montreal, accompanied by Mrs. Fergus and family, sailed on June 15th from Montreal on the Mattagami on a two months' trip to Great Britain and Ireland. Mr. Fergus will also visit France and his old home in the Emerald Isle.

Chas. Howarth, manager of the United Grain Growers', Limited, sawmill at Hutton, B.C., spent some time recently in Toronto, calling upon the members of the trade. The "U. G. G. mill," as it is known, manufacturers spruce and fir, lumber and lath, and has a daily output of about 120,000 feet.

Brewster Loud Lumber Co., Detroit, Mich., who have had their office in the Majestic Building, have removed into larger and more convenient quarters at 508 and 509 Lincoln Building, where they have splendidly located and well-appointed office.

Edward Beck of the Canadian Pulp & Power Association, Montreal, who left some time ago on an extended trip to Scandinavia, where he will study forestry methods for some time in the interests of the association, has arrived safely. Mr. Beck has entered upon his work with much interest and enthusiasm.

At a recent meeting of the Riordon Co.'s directors, held in Montreal, it was announced that I. W. Killam, president of the Royal Securities Corporation, had been elected vice-president of the company. F. B. Whittet, secretary-treasurer of the Riordon Company, has resigned.

G. W. Grier of G. A. Grier & Sons, Limited, Montreal, was in Toronto recently on business.

C. J. Brooks of Toronto, representing the Canadian Western Lumber Co., returned lately from an extended business trip throughout the Maritime Provinces.

Frederick Wade, Detroit, representing Mowbray-Robinson Co., Cincinnati, Ohio, was in Toronto recently.

Robert Stewart, Limited, retail lumber dealers of Guelph, have opened a branch yard and office at Hespeler, Ont.

Frank A. Bowden & Sons, Limited, Greenwood avenue, Toronto, have opened a branch retail yard and office on Yonge street, at the corner of Humberstone avenue. The site is in Lansing village, about a mile and a half north of the city limits. The branch yard is in charge of Harry Bowden, and a siding of the Metropolitan Railway passes through the property.

A. B. Gilbert of the Commission of Conservation, Ottawa, who has been assisting for some time conducting a survey of the Ontario forests, has left the service and gone to Kingston, Ont., where he is engaged in private work.

Dan McLachlin of McLachlin Bros., Arnprior, Ont., has been appointed a member of the Executive Committee of the National Wholesale Lumber Dealers' Association, New York city, and W. G. Power of the Power Lumber Co., St. Pacome, Que., has been appointed a member of the board of managers of the Bureau of Information, and J. S. Gillies of Gillies Bros., Limited, Braeside, Ont., has been made a member of the Forestry Committee. The appointments were made recently by J. W. McClure, president of the National Wholesale Lumber Dealers' Association.

A. E. Gordon of Terry & Gordon, Limited, Toronto, returned recently from an extended business trip to the coast and mountain mills of British Columbia.

Chas. A. Goodman of the Sawyer-Goodman Co., Nenominee, Mich., who operate several sawmills, was in Toronto recently, calling upon the trade. Mr. Goodman is a former president of the National Hardwood Lumber Association, the annual meeting of which was held in Philadelphia recently.

C. O. Staples, secretary-treasurer of the Otis Staples Lumber Co., Wycliffe, B.C., spent a few days in Toronto recently, calling upon the trade.

Mrs. H. F. Price passed away recently in Quebec City at the venerable age of 81 years. She was the mother of Sir William Price, A. J. Price and H. E. Price of Price Bros. & Co.

David Champoux, manager of the Chaleurs Bay Mills, Restigouche, Que., accompanied by his wife and daughter, have returned from an extended visit to Great Britain.

George Mulloy of Ottawa, forestry engineer and winner of a scholarship from the Government of Ontario, has been spending some time in London and Paris.

W. C. Laidlaw, Toronto, has promised to present a silver trophy for competition among the members of the Wholesale Lumber Dealers' Association who play golf. The rules and regulations governing the contest will be drawn up by a committee, and it is expected that the competition for the award will be a keen one, as there are in the ranks several expert players on the various golf courses adjacent to Toronto.

A. K. Johnson and Frank H. Harris, Toronto, recently spent several days on a fishing expedition at Wilson Lake and the Pickerel River, near Loring, Ont. They report having good luck.

A. E. Richards, who for the past two years has been on the sales staff of Terry & Gordon, Limited, Toronto, has gone to Vancouver, B.C., where he has been appointed Wese rn manager of the firm, succeeding Frank W. Gordon, who recently resigned. Mr. Richards entered upon his new duties on June 1.

Hugh Munro, who is a well-known wholesale lumberman, has returned to Toronto after spending the past six months in California. Mr. Munro's many friends are glad to welcome him back.

Among those from Canada who attended the annual gathering of the National Hardwood Lumber Association in Philadelphia this month were: Dan McLachlin, Arnprior, Ont.; Joseph Oliver, Ormsby Oliver, A. E. Clark and J. J. Miller, Toronto, and George C. Goodfellow, Montreal. There was a large attendance, and many important matters were brought up. The consensus of opinion regarding the hardwood situation was that production should be curtailed until such times as the demand improves and prices advance to a point where manufacturing can be carried on at a profit.

The T. A. Burrows Lumber Co., Winnipeg, have opened an Eastern office at Room 8, 43 Adelaide street east, Toronto, which is in charge of J. L. Nevison, who was a former sales manager for the Keewatin Lumber Co. of Kenora. The T. A. Burrows Lumber Co. operate mills at Grand River, Bowsman and Birch River, the principal product being spruce.

Mrs. F. M. Pardy, who for several years has been a member of the office staff of the C. G. Anderson Lumber Co., Toronto, has bought the "Whyte House" at Bobcaygeon, Ont., which will no doubt be the rendezvous of a number of angling lumbermen when in search of the finny tribe in the noted waters of that section.

Among the lumber visitors to Toronto during the past few days was J. P. Mackenzie of North Tonawanda, N. Y.

J. D. Sinclair, manager of the Union Lumber Co., Winnipeg, was in Toronto recently calling upon the members of the trade.

Mr. Charlton Made Privy Councillor.

Hon. W. A. Charlton
Toronto

Hon. W. A. Charlton, M.P. for Norfolk, was recently sworn in at Ottawa as a member of the Privy Council. Mr. Charlton, who recently passed his 80th birthday, is the eldest member in the Commons Chamber, and the new rank of Privy Councillor gives him the right to use the title "Honorable" for the rest of his days.

Mr. Charlton comes of a noted family long identified with the lumbering interests and the public life of the Dominion. He is a brother of the late John Charlton, M.P. for North Norfolk, who represented that constituency for a generation or more. Mr. Charlton is of English and Scotch parentage. For many years he was a member of the Ontario Legislature and was elected to the House of Commons in 1911.

Mr. Charlton is an ex-Speaker of the Ontario Legislature, a chairman of the Presbyterian Laymen's Missionary Movement, a trustee of Queen's University and president of the Muskoka Sanitarium, which the late Sir Wm. Gage founded Five years ago Mr. Charlton cruised through dense forests of British Columbia as actively and as energetically as a man half his years.

Mr. Charlton has large timber holdings and now resides at 86 Madison avenue, Toronto. His office is in the Canada Life Building, King street west. Many friends will congratulate the veteran lumberman upon the honor which has been recently conferred upon him.

Will Handle Output of Waterville Plant.

Robert Bury & Co., Toronto, have been appointed exclusive Canadian sales and distributing agents for the Waterville Veneer & Panel Co. of Waterville, Que. The latter company some time ago bought out George Gale & Son, andare makers of all kinds of veneers and panels in leading Canadian woods such as maple, birch, elm, ash and basswood. The plant is thoroughly equipped in every respect and has excellent facilities. Among the installations are three lathes, one of which can cut rotary veneer up to 120 in. long. In the panel factory only waterproof glue is used. Robert Bury & Co. are not only handling the product of the Waterville plant for the Dominion and the United States, but also in the Old Country as well, stock being carried at London, Liverpool and at Burton-on-Trent.

Valuable Medium on Retail Advertising.

The Long-Bell Co. of Kansas City, Mo., have recently sent out to the trade a splendid publication known as "The Long-Bell Advertising Service for Retail Lumbermen." This advertising and merchandising service is available to dealers handling the products of the firm. The booklet is prepared in newspaper form so that it will be possible to insert additional or slbstitute pages from time to time. There are 104 pages in all and 90 newspaper two-column cuts are shown, and can be furnished in either two or three column size. On the page with each cut are three pieces of suggested copy which may be used with the illustration. The work is admirably gotten up, contains a fund of information and is one of the most complete and interesting publications that the Long-Bell Co. has ever issued. A number of valuable advertising suggestions for retail lumbermen are given.

Lumber Firms Will Use Light Planes.

The value of lighter-than-air aircraft for forestry patrol and similar work in Canada will be demonstrated during the present flying season by several Canadian lumber firms working in co-operation with the Canadian Air Board. The Air Board hopes to develop the use of this class of machine in the Dominion by loaning the equipment to firms desirous of carrying out experiments.

In the gift of aircraft received by Canada from the mother country at the close of the war, there were a number of lighter-than-air machines, equipped with 100 horsepower Rolls-Royce engines. None of these have yet been used since their arrival in Canada, and it is feared that if they are kept in storage they will deteriorate and become useless or almost so.

One pulp and paper company, operating in the Lake of the Woods area, has already made application for a lighter-than-air machine, and mechanics are working at Camp Borden packing the first machine for shipment to the companys station. Two or three other tentative applications have also been received. The Air Board, it is stated, has some eight complete machines for distribution. They have a gas-carrying capacity sufficient to propel them for 16 hours, so that the difficulty of finding landing places in a forest area is greatly overcome.

Extensive Distributing of Seedlings in Ontario.

The Ontario Provincial Forestry Branch expects to distribute in small trees this summer 1,000,000 Scotch pine, 1,000,000 spruce, 4,000,000 cedar, hard and soft maples, poplars, etc., and 400,000 white pine. These trees will be given to the people of the province who are anxious to replant their farms or other places. Nearly 7,000,000 trees have been sent out altogether.

Hon. Beniah Bowman, Minister of Lands and Forests, E. J. Zavitz, head of the Forestry Department, and F. J. Niven, secretary of the Department of Lands and Mines, returned recently from a trip to the Norfolk County Forestation Farm, located on the shores of Lake Erie about 15 miles from Simcoe. It consists of 1,720 acres. In former years about 400,000 seedlings have been distributed, but this number has been far exceeded this year. Of the 1,720 acres, 1,180 are permanent forest plantings. There is a fresh water supply at present, but to make such a supply sure for the farm a tank of 20,000-gallon capacity is being added to the already existing 5,000-gallon tank.

The Minister of Lands and Forests is considering the establishment of other forestation farms in Ontario where seedlings from the Norfolk station can be transplanted when they are ready, using the Norfolk farm for the first raising of the seedlings.

Bathurst Company Carrying Out Improvements.

The name of the Bathurst Lumber Co., Limited, has been changed by letters patent to The Bathurst Co., Limited, and the capital stock increased to $5,000,000. Angus McLean, general manager of the company, stated that they are extending their operations in the way of completing hydraulic power, and are making plans to still further extend the capacity of their pulp department, as well as erect paper mills. The details of the plans of these extensions have not yet been completed.

The sulphite and sulphate pulp mills of the Bathurst Co. were closed down for some weeks until the new hydraulic plant was in operation. Mr. McLean said the cost of coal to-day is so heavy that the Bathurst Company cannot operate their plant by producting electric power from steam. In addition to the high cost of coal, the excessive railway freight rates are paralyzing business and they are obliged to change their mode of shipment from rail to water. One vessel has already been engaged to carry a cargo of pulp from Bathurst to Philadelphia, and negotiations are under way for another vessel to convey pulp from Bathurst to Chicago and other points on the Great Lakes where the company used to ship entirely by rail.

Mr. McLean declared that the two great factors to-day in the cost of running a plant were coal and railway freight, and until these are adjusted and other materials reduced, it is going to be rather difficult for a manufacturing plant such as theirs to operate profitably. The labor situation is satisfactory at the present time, the company getting the best of co-operation and service from their men who have accepted reductions willingly.

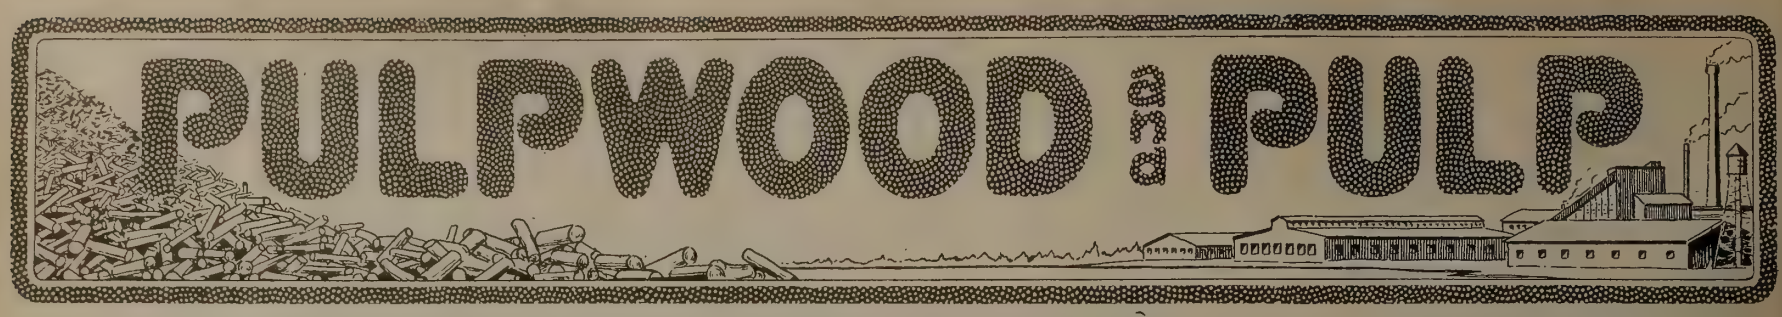
Forest Fires Were Quite Extensive.

A despatch from Quebec City gives Mr. H. Kieffer, Forestry Engineer of the Dominion Government, as authority for the statement that forest fires in the northern section of Quebec were far more extensive this year and greater in number than in 1920, but, due to the efficient fire-fighting machinery, the damage has been considerably less. The most serious fire occurred at La Tuque when over sixty square miles of pulpwood were destroyed. It is estimated by Mr. Kieffer that one million dollars was lost in this conflagration.

Progressive Dealer Doing Good Business.

J. B. Mackenzie, retail lumberman of Georgetown and Acton, who also deals in coal, cement and lime, recently spent eight days attending the National Retail Coal Convention at Richmond, Va. The delegates were all entertained by the Retail Coal Exchange of Norfolk, Va., and Washington, D.C., and were well looked after. Mr. Mackenzie reports they had a splendid time, and states that business with him in the lumber line is good and mill is busy.

Mr. Mackenzie has recently been doing some extensive advertising and believes in keeping his name before the public, and the results obtained are satisfactory. He is of the opinion that there is nothing like continuous publicity, as when people want anything in the line of building supplies, they naturally think of the dealer whose name is most familiar to them and most closely associated with the trade.



Can Get Pulp Cheaper From Canada.

For some time past newspaper owners in the States have been endeavoring to discover a place where they can buy pulp at a lower rate than in Canada, and they have failed to do so. Representatives have been sent to Norway, Sweden, Germany and many other places, and they all come back with the same report that the supply available in these countries is so small that it would be useless to look to them for anything near the quantity that is needed.

With the depletion of the United States pulp resources, the newspapers of that country have no option but to send to Canada for their supplies, and the business, if proper conservation methods are adopted, will undoubtedly grow here year by year.

Quebec has taken a lead in protective work. Frestry engineers report that in their opinion fires in the past have cleared off much more trees than has the annual cut. It is gratifying to no that this year, despite the fact that the spring was exceptionally dry, there has been much less loss from fire han last. This is due to the fact that there was a better patrol system and that the owners of limits are co-operating with the Provincial and Federal authorities in seeing to it that fire damage shall be just as small as possible.

Quebec is fortunate at the present time in having forestry engineers who are really interested in their work and who are doing everything in their power to teach others the necessity for the proper care of the greatest asset of the Province. Their work is now being appreciated by limit holders as never before, for once a fire is detected now, thy have no difficulty in getting men from all surrounding operations to assist in the fight. This is a hopeful sign, and, with the assistance of the air patrols, it is safe to forecast that in the very near future forest fires here will be a rarity instead of an every-day occurrence in the spring.

The only disastrous fire so far this year was the one which occurred last week north of Windigo on holdings of the Brown Corporation. About sixty square miles were burned off, but, considering the fact that the forests were as dry as tinder and the blaze got a great start, it is wonderful that no more damage was done. There were over 1,100 fighting the flames for several days.

Interesting figures are published by the News Print Service Bureau showing the United States imports and exports of printing and wrapping paper during March of this year. These show that the supplies received from Canada are a great deal more than from all other countries.

Cost of Operating is Still High.

The New Ontario Colonization Co., whose land office and mills are at Jacksonboro, Ont., completed their winter logging operations some time ago. They report that the amount cut is about the same as last year. They are now bringing the logs on the drive which is coming along all right. W. K. Jackson, president of the company, states that the cost of logging and operating up to date naturally are going to be high as compared with what the finished product is bringing. They are moving some lumber, as well as pulpwood, and the prices which are being obtained are less than cost. Mr. Jackson says that labor conditions are more favorable, but that freight rates are too high and must soon be adjusted.

Says Fire Restrictions Are Too Severe.

Writing to the press, Horace G. Bell says that the present fire restrictions hamper settlers in New Ontario, and that there is considerable friction between the fire rangers and settlers regarding permits to burn debris. Many settlers welcome bush fires as an immense aid to civilization. In the arguments put forward in favor of stringent fire restrictions a good deal of capital is made in regard to the economic waste resulting from bush fires. From the point of view of the lumber interests there is some justification for the contention, for when an area has been set aside as a timber limit, it is unfortunate when a fire makes its way into it and does damage. But when a certain territory is thrown open for settlement the intention of the Government is to have it converted into agricultural land, and the quicker it is cleared of its timber the better it will be for the Province. Homesteaders, who are not within two or three miles of a railway siding, or who have not a convenient stream down which they can float their logs, cannot, in normal times, dispose of their timber at a profit, and their only alternatives are either to leave it standing or cut it down and burn it. Last year, it is true, owing to the high prices which prevailed, settlers living four miles from the railroad were able to ship out their pulpwood and still have a margin of profit, but, as a general rule, a long haul to the track renders the sale of pulpwood unprofitable. If the timber is allowed to remain standing the land is producing nothing, and is bringing in nothing either to the settler or the Province. To allow the land to remain uncleared for any length of time is a greater waste than to cut the timber down and burn it. The fact also deserves to be borne in mind that a fire in a pulpwood area is not always an unmixed evil, for "fire-killed" spruce—spruce from which the bark has been removed by fire, but which has not been blackened or otherwise damaged—has been fetching a much better price than the green spruce.

Even if the Government does not see its way to modify or remove the existing restrictions it might, at all events, do something to make them so that they will cause less irritation to the settlers. When an applicant desires to have a permit he has to go in search of the fire ranger, and, after walking several miles over an abominable trail, pestered by mosquitoes and black flies, he may have his request refused, or perhaps be unable to find the ranger. At least the rangers should be at an appointed place at certain hours, so that the settlers would not so frequently have to make wasted journeys. Moreover, a little more discretion might be left to individual rangers. Frequently the fiat goes forth from the chief ranger that no permits are to be issued to anyone in a district, and the man who has some burning to do at a spot where there would be no more likelihood of the flames spreadingthan there would be in the middle of Lake Ontario, says Mr. Bell, is refused a permit because of the general order issued by the chief. The responsibility of deciding when it is safe to start a fire should be left with the ranger who visits the spot, and is in a position to judge whether the flames are likely to spread or not.

Fire Ranging Charges Were Reduced.

In his evidence before the Timber Investigation Commission E. J. Zavitz, who is head of the forestry branch of the Ontario Government, admitted that in 1919 the cost of fire ranging was $500,000, compared with receipts of $200,000. The standard levy for fire ranging was $6.40 a square mile and the Spanish River Pulp & Paper mills had paid $25,000, which worked out ae $3.30 per square mile. Mr. Zavitz stated the reduction was made by the department because the company had contened that the fire ranging service on its limits was not adequate. In 1917, owing to the company getting a reduced service, they had paid $25,000 instead of the normal $75,000.

The Pulpwood Outlook is Uncertain.

An Eastern pulpwood concern, in speaking of the production, demand and prices for pulpwood in Canada, says that under existing conditions it is difficult, if not impossible, to forecast the trend of production or marked developments. In other words, there are so many conditional factors in the situation, the outcome of which no one can foresee, that they are constrained from making any statement or prognostication regarding the situation at the present time.

Belgian Industrial Company's Operations.

The name of the Belgo-Canadian Pulp & Paper Co., Shawinigan Falls, Que., has been changed to Belgia Industrial Co., Limited. H. E. Howe of the lumbering department says they expect to cut about the same amount of lumber as last year. Market conditions are about the same in that district as all over Canada and the United States, with little demand and low prices. Mr. Howe states that, alehough they are doing some business, it is nothing compared to the usual sales at this time of the year. Labor is plentiful and far more efficient than last year. Every man is giving attention to his work, and there are few who have any complaint to make.

Will Soon Start Rossing Department.

The Spruce Falls Company of Neenah, Wis., who are erecting a sulphite mill at Kapuskasing, Ont., report that the work of installing the equipment is going on apace. It is expected the plant will be ready for operation about September 1st. A large force of men is at work, but there is no particular rush to justify putting much pressure on the completion of the plant owing to the present and prospective state of the sulphite market and conditions in general.

The rossing department of the plant will go into commission early next month so as to insure the completion and rossing of the pulpwood of the company before cold weather sets in next fall. The present stock of pulpwood is between 65,000 and 75,000 cords.

The Spruce Falls Company say that, on the construction of the groundwood mill and water power plant, they have not resumed operation and it is not likely they will do so before the end of the year unless conditions materially improve. They developed a small water power at the mill site yielding about 1,200 h.p., with which they expect to operate the sulphite mill until their Sturgeon power development is undertaken and completed. The company have also installed as part of their sulphite equipment a steam turbine of ample capacity to operate the mill, which will have 120 tons daily capacity in ease of water power failure. This was part of the original plant of the company and was installed as a sort of standby power to take care of any requirements during periods of low water.

Took Out Big Consignment of Pulpwood.

Chas. W. Cox, a well-known pulpwood contractor of Port Arthur, has completed taking out 20,000 cords of spruce pulpwood in that district for the Detroit Sulphite Pulp & Paper Co. of Detroit. Shipments have begun from Nipigon Bay, where Mr. Cox's wood headquarters are located. Barges will carry the wood from Nipigon Bay to Detroit in regular trips until October next. Each barge will carry about 1,000 cords at a sailing. Mr. Cox had 300 men employed in the bush during the winter and 150 horses. His camps were regarded as model ones. The value of the pulpwood taken out by him for the Detroit company is estimated at $400,000. In addition to the harvesting the wood for the Detroit concern, Mr. Cox cut 6,000 cords for the Provincial Paper Mills Co., to be used in connection with their pulp plant at Port Arthur.

Reaped Big Prices for Pulpwood.

During the past winter pulpwood sold at its highest price in and around Cochrane. The farmer and the settler reaped a good harvest owing to the active demand and the value which their wood commanded. Green spruce brought $12.00 a cord and peeled and fire-killed $16.00 a cord, compared with $8.00 and $13.00 a year ago.

In the Port Arthur district high prices were also paid during the past winter for wood, up to $12.00 and $16.00 a cord, while railway ties were contracted for at 95c apiece, the highest figure ever known. There was a cut of about 160,000 cords of pulpwood in the Port Arthur district, and 500,000 ties.

In the Thessalon region lumber and pulpwood operators had a successful season, and no logs have been left in the bush. Lumbermen say, however, that the cost of logs will prevent them from making any money on their lumber this year. Those, who are in a position to wait for a turn in the lumber market, should reap a profit later on. The Crown timber agent at Thessalon reports the cut on the North Shore district at 36,450,000 feet in comparison with 20,000,000 feet

New Pulp Plant is Model One.

Col. C. H. L. Jones of Sault Ste. Marie, manager of the Spanish River Pulp & Paper Mills, paid a visit recently to the new plant of the Fort William Paper Co., at Fort William, Ont., of which W. L. Bird is the resident manager. Col. Jones expressed satisfaction with the splendid equipment and smooth operation of the plant. He says the company with which he is associated has been building every mill a trifle better than the last, and the mill at Fort William embodies all the improvements which experience has shown to be available. Col. Jones also spoke hopefully of the prospects of adding a paper mill to the pulp plant. This, he said, was one of the chief ambitions of the directors of the Fort William Paper Co., and he hoped that within a short time a definite announcement might be made.

Storehouse Destroyed, But Wood Escaped.

Fire recently broke out at Stoneham, Que., fifteen miles from Quebec City, and the blaze consumed the large storehouse of the Donnacona Paper Co., as well as its contents, consisting of 14,000 bushels of oats and seven carloads of hay. A car of lumber on the track near the building was also destroyed. The Donnacona Company's loss was $22,000, which was covered by insurance. Mooney & Byrne had 800 cords of pulpwood, on which they carried no insurance, but only a few cords were destroyed, owing to the activity of the fire-fighters. Mayor Samson of Quebec had quite a large quantity of birch dimension ready for loading, while Wm. Craig had about 300 cords of slabs. All of this wood was saved.

Would Store Pulpwood for Shipment.

E. A. Piper, representing Maine Pulp Mfg. Co., who recently purchased property belonging to the estate of the late Capt. Gow, on Riverside Road near Parrsboro, N.S., for wharfage purposes, has made application to Parrsboro for rights on Lake Glooscap for the purpose of storing pulpwood for shipment. If the plans of the company are put into operation and the proposition carried out, it will mean a large revenue for Parrsboro.

New Pulp Plant is Running Smoothly.

A carload of pulp is now being shipped daily from Nipigon Fibre & Paper Mills, Limited, Nipigon, Ont. The company has one of the most up-to-date plants in Canada and is turning out 40 tons a day. Work on the construction of the mill was commenced in August last. The Thunder Bay Harbor & Improvement Co. had the contract, and on May 13th the first wood was put through. There are eight grinders in the large wood room and four more are to be installed. Three thousand five hundred h.p. is now being consumed, and when the twelve grinders are running 5,000 h.p. will be consumed.

It may be stated that the grinders are set in tandems of two on 1,000 h.p. motors. The grinders are built up in the air so that all the finished stock is conveyed by gravity to the rotary screens and flat screens, and by gravity from there to the wet machines. The mill is using about 110 cords of pulpwood a day and there are 18,000 cords on hand. A 60-foot extension to the machine shop will shortly be made. Further expansions include the addition of two paper making machines, which will be put in as soon as business and the market warrant. J. A. Little of Port Arthur is president of the Nipigon Fibre & Paper Mills, Limited; M. D. McAlpine, Chicago, vice-president; J. Siebery, secretary-treasurer, and C. J. Plude, superintendent.

Looking Over Sites for His Pulp Mill.

E. W. Backus, president of the Fort Frances Pulp & Paper Co., was recently in Kenora looking over the progress of the power development in that. town and also considering the site for the proposed new pulp plant which will be erected in Kenora. The exact location has not yet been determined upon. It is likely that the output will be 200 tons a day. Mr. Backus said that the question of power is practically the controlling factor in the date of starting the mill, and the pulp plant can be completed and ready for operation before it would be possible to complete the power plant.

New Pulp Plant is Now Producing.

The new sulphate pulp plant of Clarke Bros., Limited, Bear River, N.S., has begun operations and will have a capacity of 50 tons a day. A. G. McIntyre, formerly with the American Newspaper Publishers' Association, is the president of the company, and W. G. Clarke, chairman of the board. The first cooks of pulp were turned out last month. The company have received an order from the United States which will keep the mills in operation for three years working both night and day shifts. Clarke Bros. will employ over 200 men. The cost of the new mill and equipment was about $1,500,000.

Pulpwood Supply Assured for Many Years.

B. F. Avery, forester of the Spanish River Pulp & Paper Mills, at the recent timber investigation in Toronto, stated that the limits of the Spanish River Pulp & Paper Co. at Sault Ste. Marie, Ont., were a sufficient area to last for all time. The Espanola limit, while well wooded, he said, is not so favorably situated as regards the amount of timber available. At Sturgeon Falls the pulpwood on the timber holdings of the company might last from fifteen to twenty years. In the course of his evidence Mr. Avery urged the development of a more efficient fire protection system for the North. "Such an organization," he continued, "could be recruited and trained from the ranks of the lumbermen in Northern Ontario."

Mr. McArthur Secures Pulpwood Berth.

It is likely that the Province of Manitoba will have in the future a large newsprint paper mill. A big pulpwood concession lying to the east of Lake Winnipeg has been granted under tender by the Department of the Interior, Ottawa, to J. D. McArthur, a prominent Winnipeg contractor and railroad man. The berth comprises 718 square miles. It is the intention of Mr. McArthur and his associates to erect a large pulp and paper mill at a cost of a million and a half dollars, and to have an output of 100 tons daily. When completed about 700 men will be employed the year round.

Second Hand Machinery & Equipment Wanted & For Sale

Quick Action Section

Special Lots Of Lumber—Positions Wanted & Vacant

Lumber Wanted

Wanted

Several cars No. 3 and culls 1" x 4 up. Maple, Birch, Beech, Elm, Spruce, Basswood or Pine. Box 571, Canada Lumberman, Toronto. 9-12

Wanted Lath

Prices on Hemlock, White Pine, Jack Pine and Spruce Lath, all grades delivered. Detroit rate.

BREWSTER LOUD LUMBER COMPANY,
1307 Majestic Bldg.,
11-12 Detroit, Mich.

Wanted—Western Spruce

Send us your spruce stock sheets and prices.

Edmund A. Allen Lumber Co.,

We have over $250,000 worth of used machinery of all kinds for sale. Suitable for mines, quarries, railroads, pulp and lumber mills, etc.

Everything carefully overhauled at our shops before shipped.

Send us your inquiries.

R. T. GILMAN & CO.,
19tf Montreal.

For Sale

One leather belt 68 ft., 18-in., 3-ply (endless). In first-class condition. W. H. Cook, Orillia, Ont. 12

Woodworking Machines

2 American No. 229 9x6 Hardwood Flooring Machines, late type, 8 feed rolls, six knife round cylinders; A1 condition; price right. Write or wire for further particulars to Garlock-Walker Machinery, Limited, 32 Front St. W., Toronto, Ont. 12

Situations Wanted

HARDWOOD INSPECTOR—Open for a position. Will go anywhere. References furnished. Box 597, Canada Lumberman, Toronto. 11

WANTED—Position as mill foreman, right-hand band sawyer or millwright. Would prefer former position. Can furnish the best of references. Box 591, Canada Lumberman, Toronto. 11

Man with 12 years' experience in the Quebec lumber and pulpwood business, speaking both languages, wishes position as superintendent in a better location for a company doing business in pulpwood or lumber. Has thorough knowledge of office work and is competent to take charge of any operation. At present manager of an American company on North Shore, but wishes to make a change. Address replies or enquiries to Box 512, Canada Lumberman, Toronto, Ont. 5-t.f.

HONEST YOUNG MAN, 19, desires permanent position with lumber firm. Two years' experience as stenographer, bookkeeper and invoice clerk; A1 references. Apply Box 609, Canada Lumberman, Toronto. 12

POSITION WANTED — By man aged forty, married. Life experience in lumbering, all branches of bush work and sawmilling from wood cutter to superintendent, including office end. Licensed scaler, can handle men and get results; best references. Box 613, Canada Lumberman, Toronto. 12-14

AGGRESSIVE YOUNG MAN ,twenty-one, desires position. Five years' experience lumber offices in different departments. Can handle correspondence and use typewriter. Permanent position with opportunities for advancement to a good future. Prefer town to city. Excellent references. Box 607, Canada Lumberman, Toronto. 12

Lumberman

Bookkeepers, Accountants, Scalers, Inspectors, Woods Superintendents, Buyers and Salesman. Softwoods, hardwoods and pulpwood. Experience in logging, sawmills, accounting. Stump to pile. Familiar with Province of Quebec, Maritime Provinces and New England States. Both languages. Will go anywhere. Apply to "Lumberman," P.O. Box 172, Station "N," Montreal, Canada. 12

Situations Vacant

WANTED—Sawyer for circular mill cutting 30 thousand feet. Apply Box 594, Canada Lumberman, Toronto. 11-12

WANTED—Male bookkeeper for lumber firm out of town, one who is familiar with lumber terms. Must be ambitious and accurate; also able to operate typewriter. Preference given to returned man. Apply, stating experience and salary, to Box 616, Canada Lumberman, Toronto. 12

WANTED—Young man as traveller in wholesale lumber firm for Western Ontario only. State salary, age, experience and references. Apply Box 605, Canada Lumberman, Toronto. 12-15

WANTED—A young man as traveller for lumber firm in Ontario. Apply Box 604, Canada Lumberman, Toronto. 12-13

Business Chances

For Sale

Planing Mill for sale, twostorey brick building nearly 100 feet long, fully equipped with machinery, at present in operation; must be sold to settle up an estate. For particulars apply to Homer Reid, Meaford, Ont. 12-15

Complete Circular Saw Mill For Sale

Heavy Saw Mandrel, with 3 circular saws 3 block carriage, fitted with P. Payette Patent Dogs Wire Rope feed with independent friction drive complete.
Live rolls (chain driven).
3 saw heavy edger (P. Payette & Co. make) 18 ft. 2 saw trimmers complete.
Friction Nigger with back pressure attachment (same as steam nigger). Log haul chain with sprockets and drive complete. One automatic saw filing machine, shafting, belting, conveyors, pulleys, etc. One 100 H.P. Crocker Wheeler electric motor, 600 R.P.M., *0 cycle, 220 volts, 3 phase, including circuit breaker fuse box, starting box, and all connections complete. Also two storey mill building with iron roof 28' x 70'. This mill is running and will be until June 1st—capacity 15 to 25 M per day. Will sell with or without power.

W. J. MARTIN,
Box 357,
10-14 Penetanguishene, Ont.

Department of Lands and Forests

PROVINCE OF QUEBEC

Leasing of a Water Powers and Timber Limit

Notice is hereby given that on Wednesday, August 3rd, 1921, at 10:30 A.M., in the sales room of the Department of Lands and Forests, at Quebec the following will be offered on lease at public auction:

1. A Water Power site in the Outardes River, County of Saguenay of about 50,000 H.P. capacity.
2. A timber limit, 3,000 square miles in area, situated in the Outardes River watershed.

For fuller details and information, please apply to the Department of Lands and Forests, at Quebec.

HONORE MERCIER,
12-13 Minister.

TENDERS FOR PULPWOOD and TIMBER LIMIT

Sealed tenders will be received by the undersigned, addressed to George C. Coppley, Esq., Mayor, Chairman Board of Control, City Hall, Hamilton, Ont., up to 12 o'clock noon, on Wednesday, June 29th, 1921, for the construction of a close board fence at Athletic Field at Scott Park, Hamilton, and for the supply of lumber and posts for said fence.

Tenders must be on forms supplied and plainly marked on the outside as to contents.

Specifications and form of tender for the above can be obtained at the office of the City Engineer, where any other information may be secured.

The lowest or any tender not necessarily accepted.

S. H. KENT,
City Clerk.
12

Rare Chance in Timber Limits

A large timber limit in Ontario, situated on a well protected harbor and containing birch, maple, hemlock, pine, elm, ash, oak and cedar, can be bought at an exceptionally low price and easy terms. Grand opportunity for any company with mills who are looking for new limits to operate. For full particulars address Box 610, Canada Lumberman, Toronto. 12-13

Timber Limit For Sale

30 sq. miles, principally hardwood, estimated 2,500 ft. Also new up-to-date sawmill, camp buildings, on limit all ready to begin operations. 5 to 7-mile haul to aswmill and railroad over first-class winter road. For further particulars apply to Box 612, Canada Lumberman, Toronto. 12-13

For Sale at a Sacrifice

Live retail lumber business and planing mill in Southern Ontario. Steadily increasing trade, but owner has other interests in different location and wishes to retire from business. A real snap for the right party. Box 606, Canada Lumberman, Toronto. 12-15

Bush For Sale

100 acres heavily timbered in Maple, Black Birch in Lutterworth Twp. on shore of Gull Lake.

R. FLEMING,
41 William St. North
10-13 Lindsay, Ont.

TENDERS FOR PULPWOOD and TIMBER LIMIT

Tenders will be received by the undersigned up to and including the 4th day of July, 1921, for the right to cut pulpwood and pine timber on a certain area situated in the vicinity of Long Lake, District of Thunder Bay.

Tenderers shall state the amount per cord on pulpwood, and per thousand feet, board measure, on pine, that they are prepared to pay as a bonus in addition to dues of 80 cents per cord for spruce and 40 cents per cord for other pulpwoods, and $2.50 per thousand feet, board measure, for pine, or such other rates as may from time to time be fixed by the Lieutenant-Governor-in-Council, for the right to operate a pulp mill and a paper mill on or near the area referred to.

The successful tenderer shall be required to erect a mill or mills on or near the territory and to manufacture the wood into pulp and paper in the Province of Ontario.

Parties making tender will be required to deposit with their tender a marked cheque, payable to the Honourable the Treasurer of the Province of Ontario for fifty thousand dollars ($50,000), which amount will be forfeited in the event of the successful tenderer not entering into agreement to carry out conditions, etc.

The said $50,000 shall remain on deposit until the pulp mill, as provided by terms and conditions of sale, is erected and in operation. Any timber cut in the meantime shall be subject to payment of dues and bonus as accounts for same are rendered. After the said pulp mill is erected and in operation, the deposit of $50,000 may be applied on account of bonus dues as they accrue, but the regulation dues as mentioned above shall be paid in the usual manner as returns for cutting of wood and timber are received and accounts rendered.

The highest or any tender not necessarily accepted.

For particulars as to description of territory, capital to be invested, etc., apply to the undersigned.

All tenders should be enclosed in sealed envelope and marked plainly on outside "Tender for Long Lake Pulp and Timber Limit."

BENIAH BOWMAN,
Minister of Lands and Forests.
Toronto, January 24th, 1921.
N.B.—No unauthorized publication of this notice will be paid for. e.o.i.-4-13

What Should Govern Prices—Reason or Economy?

The following excerpts from an article by Judge Gary of the United States Steel Corporation, in the May issue of "System," are so timely that we offer no apology to our readers for reprinting them here for the benefit of those who have not read the article. He says in part:

"I think we shall have to revise our ideas of prosperity and look to earnings over the years rather than to the earnings of a season—to strive toward the more orderly development of business instead of thinking of prosperity in terms of high prices. The prosperity that expresses itself solely in high prices is far from being sound; what we want is full, even business. Continuously mounting prices hold within tremselves their own means of destruction.

One serves no good purpose by attempting to break a business blockade by cutting prices to such figures that the returns do not yield a profit. When prices rise too high the purchasing will be light for the reason that the people have not the money with which to buy. But when prices fall too low then a time must quickly come when purchasing will drop because there is no money at all with which to buy. Very low prices may be achieved by improvement in method and the elimination of waste, but that is a slow process resulting in gradual reductions over a period. The more usual method of attaining low prices is drastically to reduce costs by lowering wages.

If wages are cut in real purchasing power—that is, if they are lowered faster than the lowering in the cost of living—then the wage earner can barely eke out an existence and his lack of purchasing power is eventually felt through the whole economic life.

The fair price is that which yields to an investment fair return for capital under efficient management—which pays adequately for the service that it renders. The same rule holds with labor. In the end that is all any of us can be paid because we are paid only out of what we produce. We cannot alter the equation—although we can try to forget it for awhile. Therefore I hold that:

(a) The depression has been wholly salutary in that it has served to bring us back to the fundamentals of business. Without the practice of the fundamentals no progress is possible.

(b) Unreasonably high prices will serve only to hold back the natural growth of the country, for trey disturb the balance between the sections of society and curtail the strongest purchasing power.

(c) Unreasonably low prices will equally retard growth—for we shall have no surplus to grow on.

(d) Fair prices are an indication of prosperity. Unreasonably high prices indicate that the period is nearing an end. The safe price is the one that returns a fair measure for work but returns nothing without work — whether the work be individual or corporate."

Advertising Space Cheaper Than Before War

The Royal Securities Corporation, which is continually investigating and analyzing practically every phase of Canadian business life to establish a correct reading of the barometer of economic conditions in Canada, says in a recent circular:

"It has to be borne in mind that commodities and services which are advertised form a constantly increasing proportion of the total of commodities and services consumed to-day by the American and Canadian public. The advertising methods of certain new and important industries — the motion picture, the automobile, the mechanical musical instrument, the patent food—are affording a lesson to industries hitherto more "conservative," and are in fact compelling them to follow suit.

"The increase in the cost of newspaper space is being largely compensated for by greater skill and intelligence in the use of it, thanks to improvements in the science of the art of advertisement designing. In addition, advertising space, measured in terms of other commodities, is actually cheaper than it was before the war, its money price having risen less than the average item in the cost of living."

The meaning of this is plain—advertising is a good buy for the building material merchant.

If You Want to Know

What that excavation is for, or who is building on that corner lot, or when the tenders for interior work or fixtures should be sent in—You can get the information from MacLean Building Reports. They will bring you—up-to-date, every morning—all the news of

Building and Engineering

Contracts—both contemplated and in course of completion. Our subscribers can get all available information regarding plans, specifications, dates for tenders, or other data through our thorough inquiry service.

MacLean Building Reports provide reliable advance information, the proper use of which cannot fail to boost sales.

Review of Current Trade Conditions

Ontario and the East.

The market for hardwoods is dull at the present time, furniture factories having further curtailed operations, while automobile concerns are not as busy as they were a few weeks ago. Prices on many lines of hardwood have dropped considerably, and there is a wide difference in the figures asked by the various wholesale firms and mills. A number of inquiries have been received for 10/4 birch, No. 1 common and better, and this has resulted in keeping the price up fairly high as compared with what other grades are being sold at. It is stated that American ash is now coming into competition with Canadian birch, and it is just a toss-up whether automobile manufacturers may not use ash instead of birch, if they cannot get the latter at a satisfactory figure.

While some sales are being made in hardwoods, all the vendors are practically taking a loss, but the object is to reduce stock and curtail holdings. Price, in certain instances, does not count, as some concerns will not buy, no matter if the material was handed them for next to nothing. Industrially, the larger cities, where big establishments using hardwoods are located, conditions are quiet, and this accounts for the mark-time attitude and the hand-to-mouth buying in general.

Toronto representatives of B. C. mills report that there has been some improvement in trade, and quite a few mixed carloads are being sold. Of course, the prices are very low and there is practically no profit on the bill, but on the whole the movement is a satisfactory sign that some demand exists. Most of the smaller mills in B. C. which had a certain amount of stock on hand and were anxious to clear it off, have now disposed of it, and this has tended somewhat to clear the situation for the larger concerns. Stocks with manufacturers, however, are badly shot to pieces, and in certain widths and lengths of small dimensions and timber it is impossible to get the required range. However, by substitution and interbuying all demands are being satisfied.

Just what the future of the lumber market will be no one cares to make a prediction. So many prophecies have been set at nought that one man's opinion is as valuable and authentic as that of another.

Ontario's softwoods are moving very slowly and the demand is limited. There have been several reductions in white pine, while for hemlock the prices being offered for the 1921 cut at the mill are so low that lumber producers say the stock cannot be turned out for the figure, let alone yield any profit to the makers.

Unless the market shows signs of brightening this fall, and there are stronger indications that 1922 will be a better year in the lumber business than that of 1921, a number of mill men say they will not put in any camps this winter. They do not care to undertake the expense of logging unless they are assured that the price for the manufactured line will yield a reasonable margin on their operation. When there is little or no demand and the selling figure is below the cost of production, timber owners and sawmill men prefer to leave their possessions in the standing trees rather than convert the same into boards, studding, joists and planks at a loss.

St. John Reports That Lumber Prices Still Sag.

Export conditions at this time and at this port remain unchanged during the past few weeks. The English market has not sent out any inquiries whatever and what business is being done in England at the present time is at low prices.

Freight rates have reduced somewhat from the Baltic to British ports, and exchange from the Finnish country is much in favor of the Finland people, who are selling their goods at any price at all to obtain finances to carry on their work. They are even beating out the Norwegians £4 to £5 per standard largely on account of exchange. Even the Irish market has not sent out any inquiries as yet. All the foreign markets seem to be in a dead state and the feeling in England is that a great deal of the old Government stocks must yet be brought forward to England. It has a detrimental effect upon the market in general.

In the United States the market is not reacting upward. There has been more inquiring for stocks, but sales have been made at lower prices, and Spruce random at St. John of the narrow sizes will not to-day net over $22.00 or $23.00 per thousand, which makes it prohibited to ship any such stocks unless at a tremendous loss.

Manufacturing at St. John has boiled down to one mill, viz.: Murray & Gregory, Ltd., and it is very indefinite as to the time they will operate their plant.

Local business is not as good as it was and prices have weakened considerably. Refuse stocks are being sold as low as $25.00 and $26.00 per M, with merchantable spruce boards and scantling around $32.00 delivered on the different work. As low as $20.00 has been accepted for refuse out of the Government stocks. This, of course, is very inferior stock to the general run of city cut lumber.

There are no portable mills or operation throughout the country, and certainly under the conditions prevailing at the present time there will not be any further production in the immediate vicinity of St. John during this present summer. There are only twelve million of logs to come through the booms and half of these will not be manufactured this year, as Stetson, Cutler & Co. are not at the present time operating. Laths are the only thing which are selling and they are netting about $5.00 on cars, St. John, N.B.

Thinks This is "Off Year" in Lumber Line.

"Once construction starts up it is going to take a long time to catch up, and most of the people are commencing to realize that after all lumber is not only the cheapest construction and that it is only a small percentage of the total cost of any building," declared a well known Eastern Ontario wholesale lumberman the other day.

In discussing the situation generally he said business was not very good and that considerable price-cutting had been going on. Some firms, who had a very small stock, are sending their representatives around and offering white pine at $10.00 to $15.00 below what other concerns are holding it at. These offers were generally made to firms who had recently bought, or to such retail merchants who had just loaded up with all that they required. The result creates suspicion and conveys the impression that prices had not yet reached bottom. "And," went on the speaker, "as long as such tactics as these are kept up there is not going to be any solidity or permanence to existing conditions. What is needed to-day is stabilization of price and production more than anything else, and this is not going to come until the trade ethics of some firms improve."

Continuing, the wholesaler said: "I believe prices are as low or lower now than they will be for some time; that is, we have swung from one extreme to the other. Millions of feet of lumber in fir, epruce, Southern pine and hardwoods are to-day being sold at 60 to 65 cents on the dollar of what they cost to be produced. It is about time for the pendulum swing back somewhere over centre, and, with the building trades and construction started again, I believe we are going to see an increased demand about June 15th, and gathering volume, and a fairly brisk market by September or October of this year.

"The architects, and I believe many people are commencing to realize that with conditions existing they can build cheaper now than they will be able to do if they put it off till next spring. Labor is, according to some of the contractors that I have been talking to, giving an efficiency approximately 100 per cent. greater than a year ago. If this is the case, and I think it is, we have cheaper construction now, and cheaper construction than we may get in 1922.

"In a letter received from England last month things are pretty bad. There is a good deal of lumber at the ports, with very little white pine. White pine is holding firm. In the interior the yards are practically bare of lumber of any description. For instance, when you find people ripping 2 in. x 12 in. good Scandinavian to make 2 x 3's and 2 x 4's they are utilizing something very valuable as compared to a smaller size and keep out of the market until the last possible moment.

"A great many seem to feel that this is going to be an off year. It certainly will be as far as profits are concerned to those of us in the wholesale trade, but if people want cheap white pine lumber, I don't believe that they are going to get in until well in towards the latter end of 1922 or the beginning of 1923."

Wages in Bush Will Be Very Low.

In conversation with an Eastern lumberman, who was in Toronto recently, a representative of the "Canada Lumberman" was told that the wages in the bush for this coming winter should not exceed $30.00

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

to $35.00 per month, and the camps could be filled with men at this figure if the firms are so inclined. This would mean late before the Ottawa or Georgian Bay Valleys could have any cheaper produced lumber fit to put on the market. The speaker said that the stock of white pine in the Ottawa Valley is the smallest he had ever known in the last thirty or forty years, and that the production this year was going to be away below what it was in 1920.

"Of course, there is the other side," he declared. "No export trade exists, there is little or no American buying, and practically no demand on our own side. A brighter picture looms up, and that is there never was so much need of construction, and likely to be such a demand for lumber as we may have before long and for some years to come. As soon as construction starts in real earnest I believe we are going to see a rebound in prices of spruce, hemlock and white pine, that is, to what some people are quoting to-day. Taking the broad-gauge view, there is no doubt that the price of lumber has a downward tendency, but this permanent lessening of values is not going to come all at once. Of course, the finished product is going to be lower as production costs go down, but we have no cheap lines now, nor are we going to have them before June or July of 1922.

"The mills in the Ottawa Valley have been slow in starting up. J. R. Booth only got his plant in operation by the latter end of May and the others began sawing this month. It is stated that some firms figure on getting more for white pine from the exporters this year than they did a year ago, and that as far as any of their lines in 12/16 ft. box and better are concerned, exporters will have to pay the same price as a year ago. None of the wholesalers are prepared to do this, as any business that they book to-day is not a case of profit, but a case of seeing if they can hold their trade with a minimum loss."

Quebec Hopes Export Trade Will Pick Up by September.

The timber and lumber trade, in so far as it applies to the city and district of Quebec, is still in the same position, nothing whatever moving in the export trade, and the conditions of the local market are likewise dull. The big firms located in the city of Quebec say there is no comparative parallel as far as the Quebec export trade is concerned, in the history of the port. In the meantime they are accepting the situation with philosophic benignity, feeling confident that a boom will set in after the settlement of the miners' strike in the United Kingdom and look with optimism for a change for the better in the month of September next. At the same time the Quebec firms are carrying a heavy stock of wood goods at their mills yards of storage, and their overhead expenses are high. They are in the fortunate position, however, of being perfectly solvent and financially strong, and can bear the adverse pressure.

In reply to queries put by the Quebec correspondent of the "Canada Lumberman," the Quebec timber and lumber interests declare that the present situation will undoubtedly affect the operations in the woods and the mills, which will not only curtail production, but cause hardship on the many thousands of woodsmen and mill operators who will be thrown out of employment. Even in the present there are many wage earners in the district of Quebec idle, who, nevertheless, prefer to remain so rather than submit to a cut in their wage demand. These workmen point out with good cause that while butter, eggs and vegetables are now selling at greatly reduced prices, the butcher will not reduce the price of meat, the landlord the rent, the restaurant and the boarding-house keepers the price of meats and the retail stores generally their prices, which makes the dollar they earn only worth 50 cents in its purchasing power. Until these concerns are forced to come down in their prices for the necessities of life, why should labor be forced to do so? Though business generally is undergoing a severe test in Canada and the United States through causes of depression. This does not refer to the city of Quebec, except in the case of the lumber and shipping trade. There are very few idle in this city in comparison to other centres, and money seems to be plentiful. The great shortage in store and dwelling accommodation is severely felt by a growing population, and to meet this situation there are many ready and willing to invest in building, but are deterred on account of the cost of labor and material. If labor were to meet the situation half way and the material decrease in its price, the same as lumber has done, a boom would immediately set in as regards the city of Quebec that would involve the expenditure of millions of dollars in construction and help to break the back of the present condition of depression.

The pulpwood business in Quebec is on a par with the lumber trade. There is no demand for this wood, and the dealers engaged in the business are simply sitting tight waiting a reaction in their favor. The only wood going to the mills these days is transported by water, and this is insignificant in comparison with the movements of the past.

Naturally the labor unrest and strikes in vogue at the paper mills are having a deteriorating effect on the sale and absorption of pulpwood for the manufacture of pulp and paper. There are signs, however, that by the end of the next three weeks these conditions will be ameliorated by a compromise and the paper mills again operating at their full capacity.

The Jonquiere and Kenogami paper mills, owned and operated by the firm of Price Bros. & Co., which have not been functioning for a month owing to labor difficulties, have in operation one machine, which commenced May 23rd, with a manufacturing capacity of 52 tons of paper per day. Sir William Price, who personally took charge of this strike, has not from the beginning shown any inclination to effect a compromise with the strikers. He takes the position, and is backed up by the directors and shareholders of the company, that capital, with its risk, has more at stake for its protection than irresponsible labor, and is adamant in his position not to give in to unfair demand of labor, even if the mills have to be shut down for an indefinite period. Those who are familiar with Sir William and his characteristic willpower, fully realize that he means to keep his word.

At the annual meeting of the company, held recently, Sir William Price in his address to the shareholders, said in part: "Last autumn the lumber market commenced to sag, as the natural result of the readjustment conditions following the war. The present season shows a still further and more definite decline in demand, leaving the country with considerable stocks on hand at a comparatively high cost. Your company has made such readjustments in values as your directors have considered wise and feel that little or nothing further can be done, excepting to curtail production and await revival of demand."

Referring to the company's paper mills, Sir William said the demand for paper has somewhat fallen off. "In our efforts to readjust the affairs of your company to suit existing conditions, we considered it advisable to make a reduction in the scale of wages in certain departments of our mills.

The result of putting into force this policy was that a few groups, led by agitators in their particular branches of the International Union, lodged complaints and forced us to close down. We are, however, able to carry on in some departments, and are manufacturing groundwood, thus taking advantage of the season's water supply."

Preparing Comparative Freight Rate Statement

R. L. Sargant, manager of the transportation department, Canadian Lumbermen's Association, Ottawa, says that he has not as yet received reports from many of the members as to whether they have any overcharge claims which require adjustments. He hopes to hear from more members in the near future. He says that he is taking out or making a statement, showing comparative rates on lumber from British Columbia and Pacific Coast points, and also southern United States shipping points, together with stations in the Maritime Provinces and points on the Transcontinental Railway; also the lumber-shipping territory in the Provinces of Ontario and Quebec to the larger consuming points in these Provinces. The department is using the rates which were in effect prior to the first general increase authorized by the Board of Railway Commissioners as compared with the rates in effect at present.

Mr. Sargant adds that his department is not yet in a position to make public any particulars as to just what action may be taken to endeavor to adjust the freight rate situation as it affects the lumber trade in Canada to-day, but may have something further to offer in this connection later on.

The Operation of New Sales Tax.

In connection with the new sales tax, which has been imposed by the Government, a good deal of uncertainty prevailed for awhile, but all points in doubt are now pretty well cleared up, and the tax appears to be operating as smoothly as can be expected. Naturallythere are some complaints from one section of the lumber industry that another does not bear its adequate share, and vice versa, but apparently the present regulations will remain in force for another year.

Some points that should be emphasized are that the tax is 2 per cent. on lumber sold by a manufacturer to a wholesaler or a retailer direct. Of this the manufacturer may absorb ½ of 1 per cent., but there must be distinctly shown on the invoice the tax of 1½ per cent., which shall be paid by the wholesaler or the retailer buying direct.

Wholesale or retail lumber dealers charge no tax in re-selling, and the retail lumber dealers pay no tax to wholesalers. These points should be clearly driven home. Another point is that manufacturers of lumber collect at least 1½ per cent. from their customers and pay 2 per cent. to the Government.

Retail lumber dealers pay at least 1½ per cent. when they buy sash, doors or similar articles from manufacturers. Retail dealers must also collect at least 1½ per cent. on sash, dors and articles manufactured in their own planing mills, and they pay to the Government 3 per cent. They are entitled to collect the whole 3 per cent. from the customer on sash, doors, etc.

The Government requires a tax of 2 per cent. on lumber to be paid by the manufacturer who, as already stated, may absorb ½ of 1 per cent. He must collect at least 1½ per cent. of the tax from his customer.

There is no further tax for re-sales. The lumber for this purpose includes rough sawn or dressed lumber and flooring, siding, ceiling, etc. It may be stated that the wholesale lumber dealer has no interest in the tax as a collector. He must pay the tax, amounting to at least 1½ per cent., to the manufacturer, but is not allowed to collect the tax from his customer.

Some wholesalers in the West have, it is said, been endeavoring to show a tax of 2 per cent. on their invoices and have their retail customers pay this. There is nothing to prevent a wholesaler showing the tax on an invoice or attempting to collect it from a retail patron, but there is no proviso in the act to specify that the retail customer shall pay any such tax; in fact, he is exempt from that. It is quite a different thing to make an imposition and another thing to collect it, especially wherethere is no legal status or backing for such a course.

The most recent instructions on the sales tax sent out by the Canadian Lumbermen's Association of Ottawa are the following:

Lumber Bought on Pro Forma Invoices.

The Department of Customs and Inland Aevenue took up with us a few days ago the question of sales tax on lumber bought and paid for on pro forma invoices between May 19, 1920, and midnight, May 9 and 10, 1921. According to the first ruling, as per our circular of May 23, there was to be no tax on such transactions. A reconsideration of this point by the department has resulted in a change, and after considerable negotiation you will please substitute the following for paragraph 2 on page 2 of our circular of May 23:

The new ruling is:

"On sales of lumber paid for on pro forma invoice commencing May 19, 1920, and up to and including midnight of May 9, 1921, but not shipped until on or after May 10, 1921, if stored in the manufacturer's yard, the tax will be 1 per cent. on shipment to a Canadian destination, and there will be no further tax on resale."

This 1 per cent. must be billed forward with the shipment and collected by the manufacturer from the purchaser.

On doors, window frames, sash, etc., the planing mill man, when selling to a contractor or a consumer, will charge him 3 per cent. If disposing of the product to a wholesale lumberman or a retailer, who sells it again, then the tax is 1½ per cent., and on the resale 1½ per cent. more has to be collected by the wholesaler orth e retailer.

R. L. Breadner, Commissioner of Taxation, Ottawa, in a recent letter to a leading Ontario lumber firm, with respect to the sales tax, says that the act pertaining to tax on sales passed at the recent session of Parliament provides, with respect to lumber, than an excise tax of 2 per cent. shall be imposed, levied and collected on sales and deliveries by the Canadian manufacturer and of 3 per cent. on importations, and that no further excise tax shall be payable on re-sales. The act also further provides that the purchaser shall be furnished with a written invoice, which shall state separately the amount of such tax to at least the exent of 1½ per cent., but such tax must not be included in the manufacturer's costs on which profit is calculated.

Big Shipment of Match Splints Overseas.

There is now in mid-ocean on their way to England to be "dipped" 520,000,000 match splints chipped from Ontario poplar. It may be stated that splints are the sticks of matches without their heads, and these are being received in England. The shipment was made from Quebec by Maguire, Paterson & Palmer of Pembroke, and is the first output of their new mill which is now in operation. Five freight cars were required to carry the load to the steamer. The head of the industry is Sir Alex. Maguire, who has been recently paying a visit to Canada. His company is one of the largest in the world and prior to the war received all its splints from Russia and Finland.

One Firm That is "Standing Pat."

Writing the "Canada Lumberman," the manager of a leading central Ontario company says: "Of course, we have not made many sales since last year and we have considerable white pine in stock, as we have not reduced prices. The great drawback in the lumber trade is the excessive freight charges. In shipping a carload of lumber last month to a nearby city just ten or twelve miles away, we paid as much as we paid to ship a carload to Toronto in 1914, and the latter place is ten times the distance. We find that prices are keeping up in every other commodity in building. Cement and iron are holding, but there is considerable cutting by some dealers in lumber prices."

Northern Woodworkers, Limited, Bathurst, N.B., were recently incorporated to take over the woodworking factory and business operated by A. E. Chapman, and to manufacture and deal in all kinds of wooden products. Capital, $24,900. Among the incorporators are A. E. Chapman and S. Chapman, both of Bathurst, N.B.

La Compagnie Gagne, Dufour & Lebel, Herbertville Station, Que., has been incorporated to conduct a general wholesale and retail lumber business, with a capital of $20,000. F. Gagne and E. Dufour, both of Herbertville, Que., are two of the incorporators.

Mutual Builders, Limited, Toronto, were recently granted a Provincial charter to deal in all kinds of building materials. Capital, $40,000.

Steam logger. Seven sizes, from 10 to 50 H.P., and one or more drums to suit the work.

This Type of Logging Machinery is a Proven Success at
Reducing Labor Costs, Increasing Output of Logs and Multiplying Profits
SOME OF THE WORK THEY DO

Drag logs from the stump to roadway or rail.
Load logs on wagon, sleigh or car.
Unload logs from wagon or car.
Pile logs where you want and as high as you desire.
Pull loaded wagons or sleighs up steep hills.
Put logs into water, or take logs out of water.
These machines are small enough and light enough to be moved about easily over rough country, without rails or special roadway.

Gasoline logger. Two sizes, 6 and 10 H.P., and either one drum or two drums as shown.

EDGINGS

A sawmill has been erected on the banks of the Kaministiquia River, near Stanley, Ont., and has commenced cutting. There is a large quantity of the finest birch timber there, which will be used for making birch flooring and finish.

Owing to the increased duty imposed on timber and for other reasons Dr. Dechene, Deputy Minister of Lands and Forests for Quebec, says that the revenue of the department at the close of the present fiscal year will reach over $3,500,000, as compared with $3,033,587 last year, which was a record year.

The new sawmill erected at Lakefield, Ont., by John Duignan of Peterboro', is completed. It is an up-to-date plant, with circular and circular gang saws and with lath and shingle outfit. It is understood the production will be about 30,000 feet per day of ten hours, depending, of course, on the size of the logs cut. The output this season will likely be about two and a half million feet. The new Armstrong mill, also located at Lakefield, has started running. It will likely produce about three-quarters of a million feet this year.

The Eastern Lands Department of the Canadian National Railways is opening a retail lumber yard at Capreol, which is a divisional point on the line 23 miles west of Sudbury. It is understood that the employees of the C. N. R. will be extended favorable terms by the Eastern Lands Department in the event of the men desiring to build homes for themselves. Several new houses have been erected in the progressive railway town of Capreol, where a large Y.M.C.A. building for the railway men was completed. It is an imposing three-storey structure, and one of the best appointed buildings in that part of Ontario.

The saw and grist mill owned by R. Milburn at Desboro, Ont., was recently destroyed by fire. Mr. Milburn's loss is about $8,000, with no insurance. It is not known whether Mr. Milburn will rebuild or not, as his health has not been very good for some time.

Within the past two or three months over 20,000,000 shingles have been shipped from Vancouver to Atlantic ports via the Panama Canal. The new steel steamer Lehigh recently carried 3,000,000 shingles to the Atlantic.

The plant ofthe O. I. & M. Lumber Co., Limited, at Boulder Creek, near Nelson, B.C., was recently destroyed by fire. The output of the company was about 60,000 feet a day, and it is understood that it is the intention to rebuild. They have some 5,000,000 feet of logs on hand ready to cut. John Mann is the president of the company; J. N. Irvine, vice-president,an J. J.O'Neil, secretary.

The National Cooperage Co., Limited, has been granted a charter to make barrels and cooperage and to carry on the business of manufacturers of barrels, staves and all lumber products. The capital stock is $1,000,000, and the head office is in Toronto. Among the incorporators of the company are Wm. F. Lickley, George H. Bourne, Clarence H. McArthur and M. W. MacKenna.

In a recent speech in Montreal Hon. L. A. Taschereau, Premier of Quebec, announced that as long as he had charge of administration of the affairs of the Province the regulation against the export of pulpwood from Crown lands would be kept in force. He declared that only with such an embargo in force can the Province preserve the forests from complete destruction.

W. D. Brown & Sons, Limited, Quebec, Que., was recently incorporated with a capital of $40,000 to take over the business conducted by William D. Brown of Quebec and to carry on a general lumber business.

The Star Lumber Company, Limited, Saint Joseph, Que., has been incorporated under Provincial charter to deal in all kinds of forest products. Capital 49,000. E. Tarvell and T. Pouliot, both of Saint Joseph, Que., are two of the incorporators.

The question of the location of a boundary line between two timber limits, leases for which were obtained eighty years ago, is the

cause of litigation in the Supreme Court of Ontario at Ottawa, between the Golden Lake Lumber Company and J. R. Booth. The Golden Lake Lumber Company, of which Senator M. J. O'Brien is the principal owner, is suing Mr. Booth for $40,000, claiming the defendant cut timber on land covered by the plaintiff's lease.

Security Fence, Limited, Montreal, has been incorporated and will manufacture and deal in rough and dressed lumber. Capital, $195,000.

Ben Langford, who conducted a sawmill at Lucan for a number of years, and one of the oldest residents of the district, died from blood-poisoning.

Fire which broke out recently in J. D. Walker's sawmills at Rexton, Kent county, N.B., destroyed two mills and a quantity of manufactured lumber. The loss is placed at $50,000.

Fire recently destroyed about three-quarters of a million feet of lumber in the yards of Geo. Mason & Co. at Midland, Ont. A heavy northwest wind fanned the flames into a seething furnace, but the cutting of the elevated tramways and blowing up of several piles of lumber with dynamite saved the rest of the contents of the yard, estimated at 14,000,000 feet, from destruction. The lumber belonged to the Laidlaw Lumber Co. of Toronto and Geo. Mason & Co.

Hon. Honore Mercier, Minister of Lands and Forests for Quebec, says that all precautions against forest fires have been taken in that Province and the fire protection system is the best and most efficient that it has been in many years.

A charter has been granted to Angus McLean, lumberman, of Bathurst, N.B., and others to build a hotel in Bathurst. The capital stock of the new company, which is known as Chaleurs Hotel, Limited, is $150,000.

The sawmill of Alex. Proudfoot, at Martin's Siding, Ont., was recently burned. The loss is $10,000, with no insurance. Mr. Proudfoot will use a portable mill to cut out the stock he has in the water and complete his season's contracts.

The Annois Lumber and Development Company, Limited, Gladstone, Man., was recently granted a Provincial charter to conduct a general lumbering business, manufacturing and dealing in all kinds of forest products. Capital, $40,000. H. E. Jacob and S. H. Fahrni, barristers, both of Gladstone, Man., are two of the incorporators.

R. B. Herron of R. B. Herron & Co., Fionaga, Ont., spent a few days in Toronto recently. The mills of his company are sawing between 4,000 and 5,000 railway ties daily and about 30,000 feet of lumber. The majority of the employees are returned soldiers.

The Western Canada Sawmill Yards, Limited, have sold out to the Security Lumber Co., Limited, of Moose Jaw. It is understood the transaction involves over half a million dollars. Nnder the terms of the sale 31 retail lumber yards and eight hardware stores operated by the former company become the property of the purchasers, who will now operate 78 lumber yards and 10 hardware stores in the Province of Saskatchewan.

Kaministiquia Lumber Co., Fort William, have recently installed considerable new equipment in their new planing mill erected at the corner of Vickers & Myles streets, Fort William. It is the intention of the company to make all their own sash and doors in the near future.

Construction work will be commenced in the near future on a logging railway north from Squamish to the vicinity of Lake Alice, B.C. According to estimates upwards of 2,000 000,000 feet of logs will become available for transportation by this means. The new undertaking will have incorporated with it the booming grounds formerly operated by the Howe Sound & Northern Railway, making possible the handling of unlimited shipments.

The Alliston Wood Products, Limited, have been granted a charter to deal in wood and other articles employed in building and to manufacture and deal in specialties, toys and other commodities for household use in the building line. The capital stock is $100,000 and the head office is in Toronto. Among the incorporators are Phillip D. X. Trudel, L. D. Doherty of Toronto, and George E. P. Dehaney and John H. Mitchell of Alliston.

The Roof that beautifies the community

Homes and Buildings roofed with Brantford Asphalt Slates lend distinction to the neighbourhood. The red and green slates are in Nature's own colors, unfadeable, and harmonize perfectly with the surroundings. You will add attractivsness and value to your home by using

SIX ROOF COSTS

1—INITIAL COSTS OF MATERIAL—Brantford Asphalt Slates are sometimes higher in initial cost for the material.

2—NAILS REQUIRED—Brantford Asphalt Slates require ONLY 648 nails to lay a square. Brantford Asphalt Slab Slates require ONLY 450 nails.

3—COST OF LAYING—Brantford Asphalt Slab Slates are four on one strip—require only one operation in handling, one operation in spacing—Individual slates are 8x12¾ inches—Cut easily, fit easily, fit on angles and bend over round surfaces. You save 30 to 50 per cent. in laying.

4—NO PAINT OR STAIN REQUIRED The surface of Brantford Asphalt Slates is in nature's permanent colors, green and red, unfadeable, always attractive requiring no stain to produce artistic effects., no liquid coats to make them fire resistant.

5—SAVING OF INSURANCE—Brantford Asphalt Slates are classed as non-combustible by fire insurance Companies—a direst saving of from 10 to 20 per cent. on premiums is effected. In certain localities fire regulations demand asbestos paper under some roof materials, but Brantford Asphalt Slates are fire resistant and are immune from special regulations.

6—COST OF REPAIRS—From the day they are laid Brantford Asphalt Slate roofs show almost 100 per cent. of the original roof untouched. Brantford Asphalt Slates do not curl, split, crack or rot. Complete protection and permanent protection are built into Brantford Asphalt Slate Roofs.

Brantford Asphalt Slates

Roofing with Brantford Aphalt Slates, individual, slab - four in one - or Winthrop tapered, provide a roof covering that lasts for years without repairs or renewals.

Highest quality felt, best grades of asphalt for saturation and coating, and the encrusting of the upper surface with slate — every operation and all materials conform to Brantford roofing standards.

UNUSUAL!

A 72 inch 15 ply Belt, 100 feet long is unusual. Nevertheless such belts are required occasionally and as a rule the requisition specifies **"Condor,"** the Original, Red, Friction Surface Belt. Let our representative tell you **Why.**

Condor BELT

Condor Belt is used on Main Drives in Saw and Planing Mills. It is also used on Edger Drives, Circular Saw and Band Saw Drives, and all other Saw and Planing Mill Drives.

We have an interesting Handbook containing useful information about belts, that we will mail to you upon request.

When You Overhaul Your Mill

THERE are wet places in every saw and pulp mill where nothing but the highest class belting can "make good." It is for these wet places that we recommend what most mill-men swear by—our

"ACME WATERPROOF" BELT

This belt is especially made for a rough and trying service. It has less stretch than any other belt by 15 to 25 per cent.
When you are overhauling try a Goodhue "Acme Waterproof" belt. Other Goodhue belts are "Extra" and "Standard."

Prices and Particulars on Request.

"The greatest indictment which can be brought against industry in the United States is the charge of waste."

—Quotation from Babson's Report

Can you answer this charge and clear yourself in the tribunal of Competition?
The indictment is particularly true in the woodworking industry and can be laid principally to inefficient kilns.
Analyze the results of this department in your own business and determine what your answer will be.

ELEVATION WITH FRONT REMOVED

Contractors for **Boiler Settings and Power Plant Brick Work**

We design and construct every description of Furnace Linings, Door Arches and Jambs, and Tongued and Grooved Dutch Oven Blocks. For Furnace Arches of all kinds we supply radial blocks in six different sizes. They make an arch 9 inches thick, and as they are in lengths of 12 and 16 inches, any desired length can be obtained.

Our linings are highly refractory, strongly immune of the destructive influences of sudden thermal changes, and will withstand much compression under high temperatures—three most important qualities.

The Fire Box Blocks are tongued and grooved, and are made in sizes 16 and 18 inches high, and 4½, 8, and 9 inches thick.

All work is under the supervision of Mr. John W. Gates, who has had 35 years 'experience in the designing and installation of Boiler Settings.

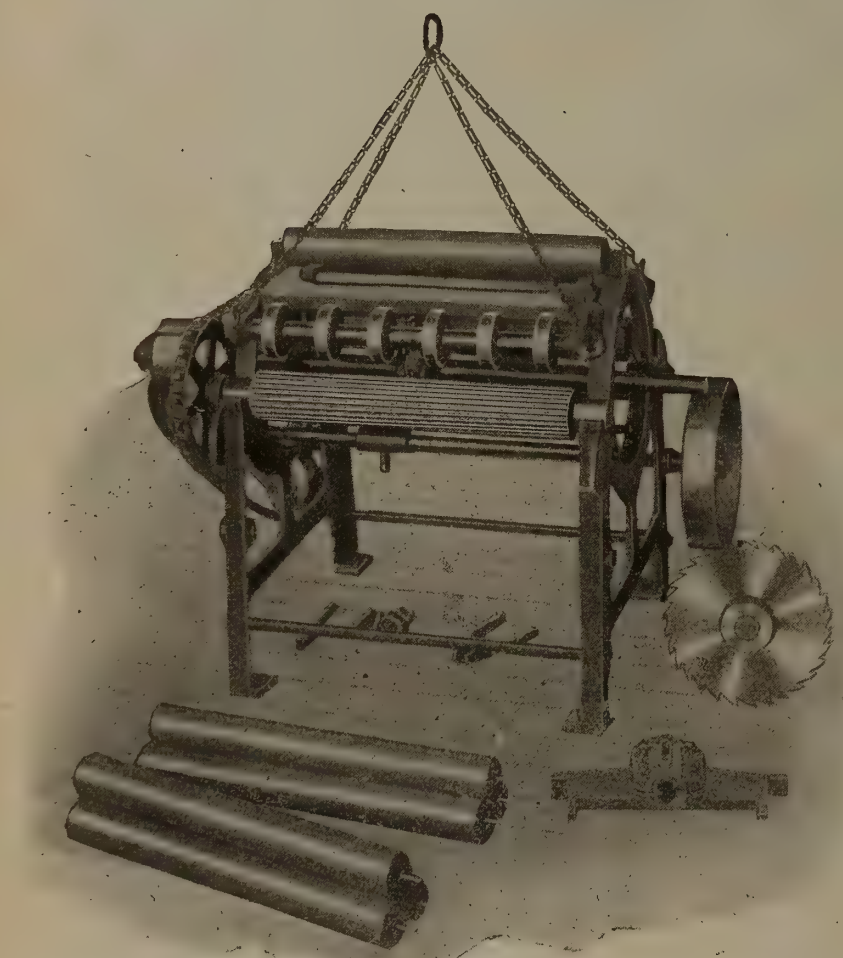
The Ideal Edger for Light Mills



Spcifications

Our new Double Edger is built on entirely new lines, and possesses many features that commend it to mill men. The saving in material alone will soon pay for the machine. The output of a mill with this machine can be increased by one-third. It is best adapted for medium-sized or portable mills that cut from 5,000 to 25,000 feet of lumber per day.

SAWS—This Edger is fitted with either two or three saws as required. The saws are 16 in. in diameter, and 10 in. gauge. The greatest distance between saws is:—Two saw machines, 24 in.; three saw machine, 20 in., the least distance between saws, 2 in.

DRIVE PULLEY—The Drive Pulley is 9 in. x 9 in., affording a good belt grip, and is supported by an outside bearing.

SAW ARBOR—The Saw Arbor is made of 2½ in. steel, and has very wide bearings.

Tudhope-Anderson Detachable Lumber Trucks

Unequalled stand-up-ability on tough, rough and soft road-beds are the tests that explain the widespread popularity of these sturdy trucks among lumbermen. Cut shows Front Hauling Gear No. 41 coupled to Hind Gear No. 42. One or more Hind Gears may be attached or detached with ease.

Look at the wide tire steel wheels. They mean easy hauling. We guarantee them. Spokes may be renewed in case of accident—not so with others. Axles are high quality square steel ensuring many years' service. Wood parts are best oak, air-seasoned and kiln-dried. All parts well ironed and braced.

Built to the following specifications:—

No. of Truck	Size of Steel Axle	Tire Inches	Wheels Inches	Frame Length	width
41 Front Gear	1¼" square	4 x ½	26	....	....
42 Hind Gear	1¼" square	4 x ½	42	5 feet	40 inches

The Machine That Made a Record in a Recent Lath Cutting, 10 Hour Test

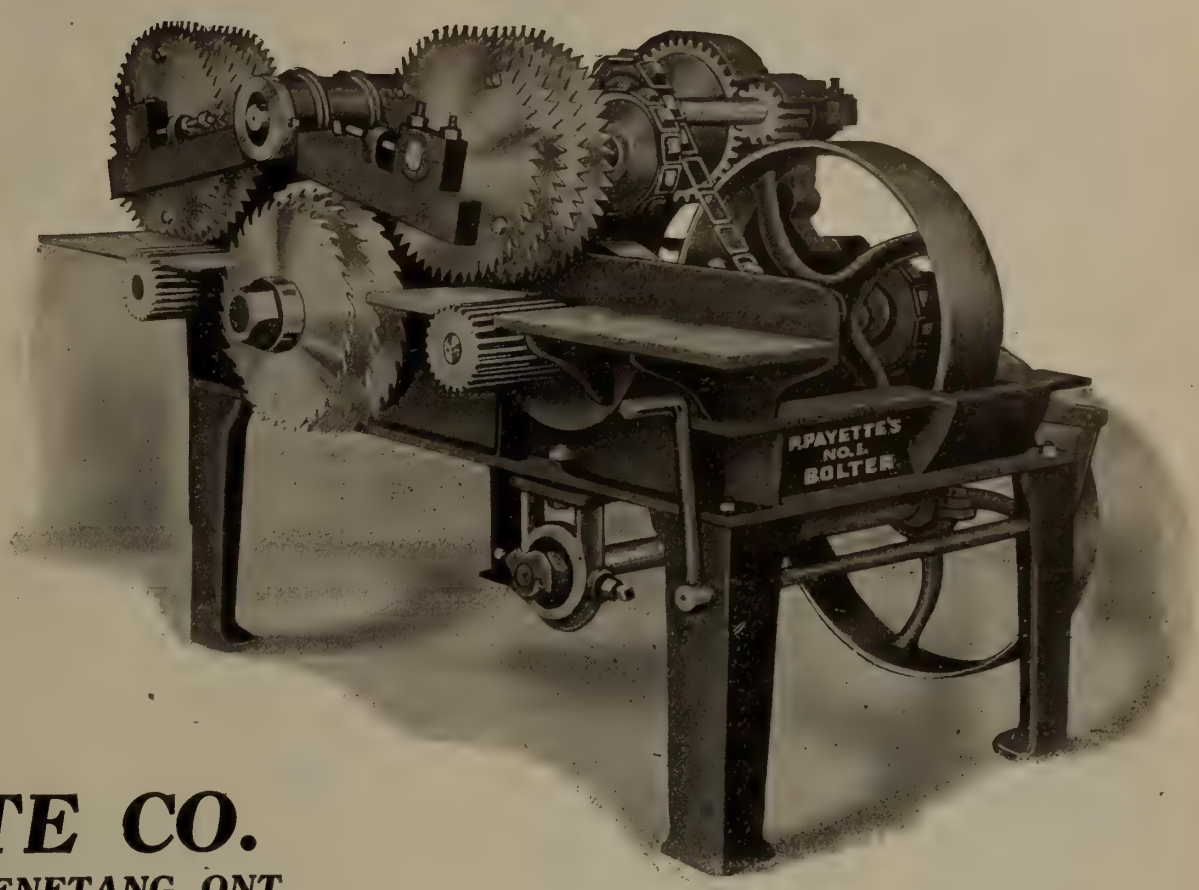
Four Hundred Sawmills in the Dominion are to-day using this machine.

It has all the latest improvements and for quick, clean, heavy duty work has no equal.

The Payette No. 1 Bolter and No. 2 Lath Mill will cut, count, tie and pile 128,350 laths in a period of ten hours. The above consisted of 4 foot laths, 1½ by ⅜ inches, and constitutes a record in rapid lath cutting.

If you are not using a Payette No. 1 Bolter you should be.

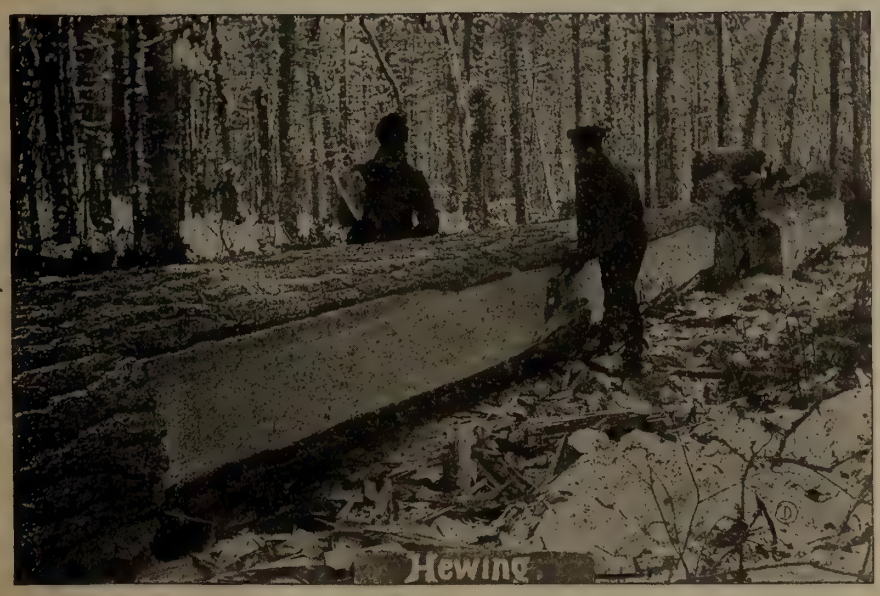
Shall we send you full particulars and prices?



P. PAYETTE CO.

J. T. PAYETTE, Proprietor — PENETANG, ONT.

ONTARIO
Canada's Banner Province



Ontario's timber production last year valued at $26,774,937 or 40% of Canada's total output.

Pine production, 905,442,000 ft. B.M.
Pulpwood, 246,282 cords.
Railway Ties, 5,704,459.

Ontario's woodworking industries, using 34 different kinds of wood, provide a ready market for the lumberman. Eighty-two per cent. of lumber used in Ontario's industries purchased within the Province.

Ontario's vast resources offer unsurpassed opportunities to the lumberman.

W. G. Harris,
President the Canada Metal Co., Limited

I want you to use

Imperial Genuine Babbitt Metal

For Stickers of highest speed, or Engines of heavy weight and

Harris Heavy Pressure

For all other general purpose work about your mills or factories, because in thirty-five years of practice, I have proven them to be

TRUSTWORTHY

Thousands of satisfied users.

You have my word, no better Babbitt is made, and I want you to believe me.

All Jobbers or Our Factories in
TORONTO MONTREAL WINNIPEG and VANCOUVER
will be pleased to fill your orders.

The Canada Metal Company, Limited

ATKINS

STERLING QUALITY SAWS

Scientific Methods

ONE of the important elements which enters into the manufacture of Atkins Sterling Quality Saws and Machine Knives is VIRGIN ORE. To this is added the proper ingredients to make them give their users long and satisfactory service.

After the steel is made it is treated for the purpose of giving it life and edge-holding qualities.

Each plate is tested to see that there is no deviation from our formula. That's why they are known as,

"The Finest on Earth."

May we send you literature to post you fully? Perhaps we can assist you to increase your production and reduce your operating costs.

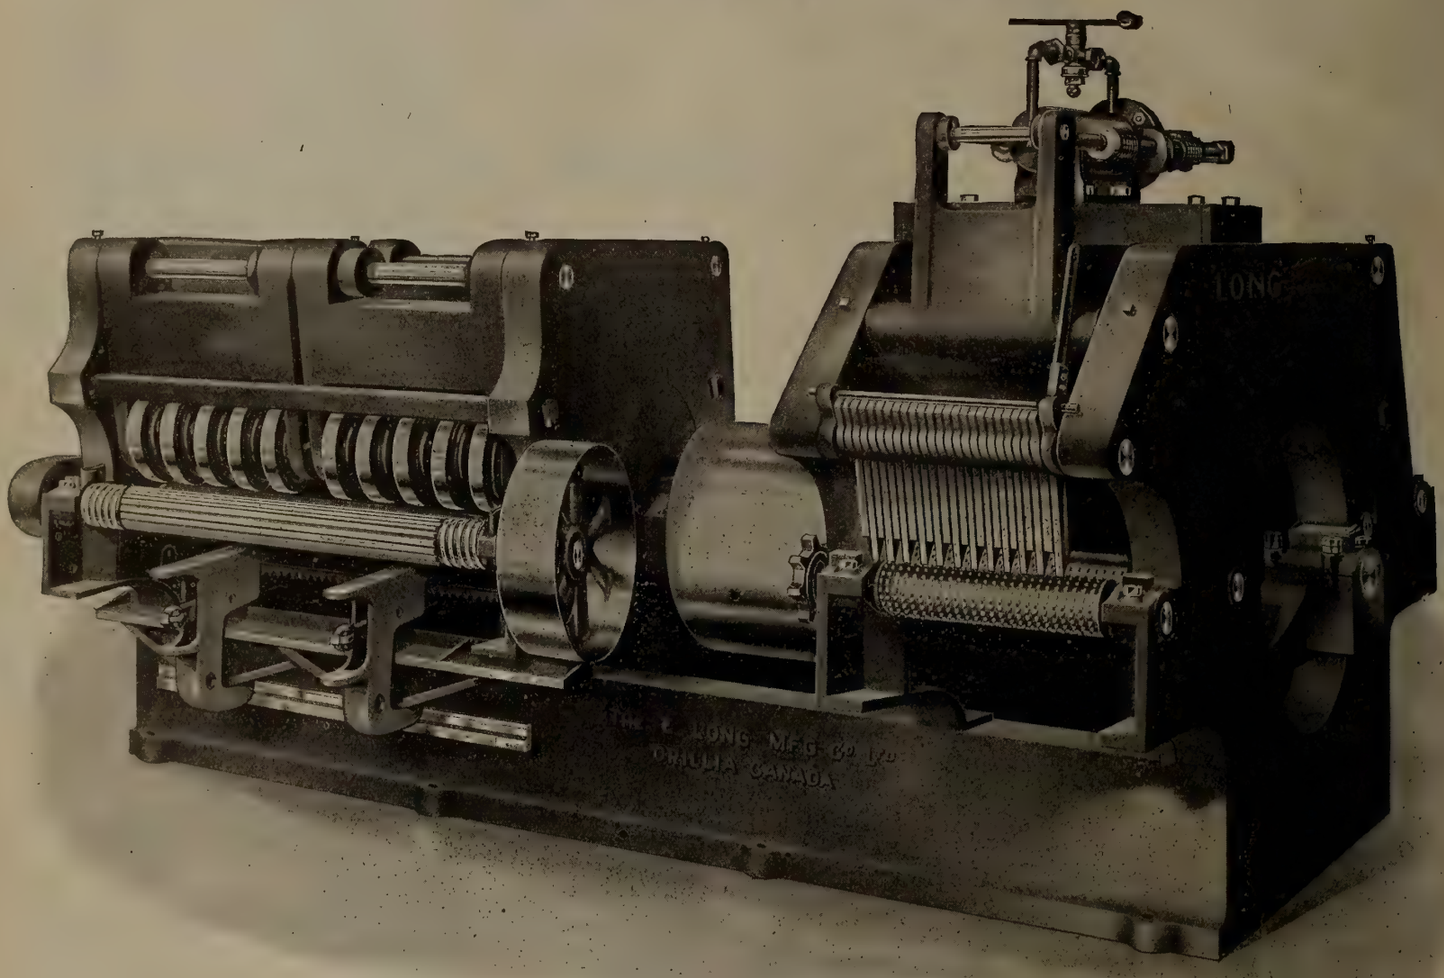
PICTURE THIS
UP-TO-DATE GANG EDGER
IN YOUR MILL



There are many mills in which the layout demands just such a machine as this.

And look how easily you can change saws?

It is as good as it looks. May we send full description?

The E. Long Manufacturing Co., Limited

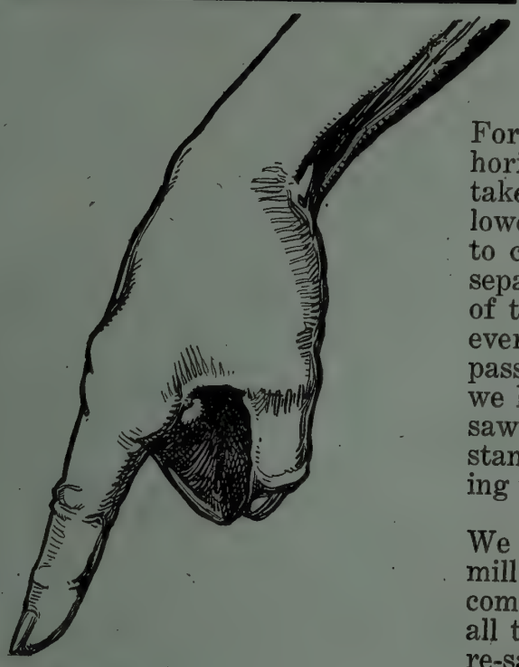
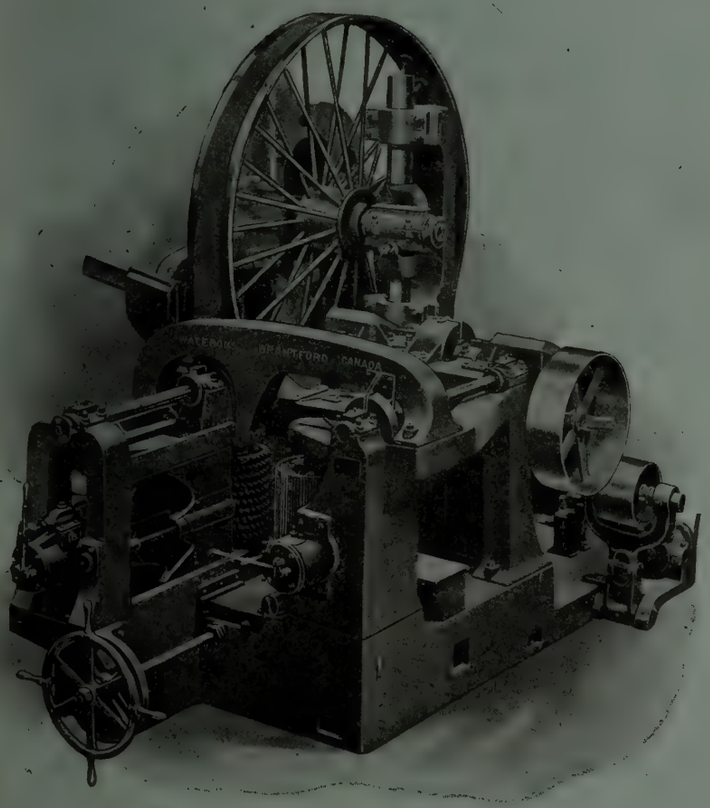
Williams & Wilson Ltd., Montreal

A VERTICAL RE-SAW





For years we have recognized the faults of the horizontal re-saw, such as the excessive space taken up in the mill—the necessity of raising or lowering the bed, or the saw blade itself in order to change the thickness of cut—the difficulty of separating the slab from the lumber at the rear of the machine, and the advisability of having every slab inspected by the sawyer before being passed through the machine. But, until recently we have never been able to perfect a vertical re-saw which would meet in every way the high standard of excellence which every machine bearing the name of WATEROUS must possess .

We are at last, however, able to offer to the Sawmill Men of Canada, a machine that not only overcomes the above faults, but one which combines all the advantages of the horizontal and vertical re-saws.

Here is a machine which will positively cut straight slabs and half logs **regardless of irregularities in material.**

The bed consists of four fluted live rolls which are adjustable and which take the place of the planed table.

There are two press rolls. The first swings on a vertical shaft in a frame which presses firmly against the feed rolls, bent to the saw in a steam actuated saw tooth roll. These two rolls are so arranged as to automatically take care of all variations in the size and shape of the slabs.

The swinging arm roller mounts any slabs immediately and the pressure of the oscillating cylinder aligns the slabs against the first two feed rolls, swinging the tail of the slab immediately in the line of the saw cut, this taking place before the saw enters the cut.

This arrangement prevents the usual thick or thin or scooped ends that are so common in all re-saws carrying the single press rolls and feed rolls.

Waterous

Pink's Lumbering Tools

The Standard Tools in every province of the Dominion, New Zealand, Australia, etc.
We manufacture all kinds of lumber tools. Light and Durable.

Long Distance Phone, No. 87

Send for Catalogue and Price List.

Sold throughout the Dominion by all Wholesale and Retail Hardware Merchants.

MADE IN CANADA

The Thomas Pink Company, Limited

Manufacturers of Lumber Tools

PEMBROKE - - - - - ONTARIO

It's a Pink anyway, you take it, and it's the best Peavey made.

Not altogether what we say, but what users say

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams"

Will move a bag containing 60,000 logs, in calm weather, 30,000 in a head wind.
